The Chairman said: Ladies and gentlemen,—As you are doubtless aware, I have recently returned from my second visit to China. The country is not a health resort by any means, but I have some satisfaction in feeling that my visits have been of advantage to the interests of the company. The Chinese Governors and other high officials whom it has been my pleasure to meet, and with whom I have been able to establish the most friendly relationships, have less appreciation for a corporation which is not represented by its own "Headmen," empowered to give quick decisions not only on matters of detail, but on broad lines of policy. If I may say so, the personal equation is of supreme importance in a country where a certain naive simplicity is combined with the utmost faith in straight dealing, and it is to the credit of the Briton that with rare exceptions he has met the Chinese on perfectly square terms. All the same, Mr Chinaman is a shrewd judge of character, and he likes to see the people he is doing business with. I have great pleasure in bearing testimony to the fact that I have experienced the greatest possible kindness and hospitality in every part of China I have visited, although some of the journeys had to be made under trying conditions. We hear a good deal about the unrest and unsettled conditions existing in the country, and unfortunately these reports are largely true, but, as everyone knows, there is world-wide unrest, and it would be unreasonable to expect that China should be entirely immune. Nevertheless, although we have suffered considerably from political troubles, they are not of such serious import as they would be elsewhere, and I feel convinced that in a short time the country will settle down to peaceful industrial developments which may astonish the world.

PROFIT AND LOSS ACCOUNT.

With these few preliminary remarks, let me now turn to the report and accounts, which have been presented to you. With your permission I will take them as read. I have no doubt that most of you turned first of all to the profit and loss statement, and if you compared it carefully with last year's you will have found some cause both for congratulation and the reverse. On the credit side, apart from transfer fees, &c., which show that the public and the market have been taking increased interest in our company, you will notice there is an increase of £1,800 in the receipts from interest, dividends, commissions, &c. If you compare this item with the corresponding item last year you will notice that the sentence "Difference in exchange" has been omitted. As a matter of fact, it has had unfortunately to be transferred to the other side, to which I shall refer in a moment; but you must remember that last year's total of £88,445 included £21,769 as profit on exchange. On the debit side in the items grouped under the head of Chinese expenditure, loss on exchange is responsible for no less than £9,419, which accounts for practically the whole increase of £1,030 shown. As business men you will realise that this question of exchange is just as much beyond the control of the board as the weather. We are glad to have its help when it is in our favour, and we must suffer the loss as cheerfully as may be when it goes against us. I am very sorry to say I can see no prospect of improvement in this respect in the near future; on the contrary, when the accounts are made up for the year ending June, 1920, it is more than likely that we shall find ourselves penalised to a greater extent than in the year under review, and no relief can be expected until world monetary conditions become more normal. Combining the credit balance on exchange in 1918 and the debit balance in 1919, the net result on balance is a difference of £31,188, which is considerably greater than the decrease of £15,724 in the ultimate net profit carried to the balance-sheet. French fiscal dues and Paris expenditure show such trifling changes that I need not refer to them in detail, but the increase of nearly £7,000 in London expenditure needs a word of explanation. No

less than £4,200 of it is accounted for by income-tax, and the balance of £2,800 is spread over several items, of which salaries and the higher cost of stationery, postages, telegrams, &c., constitute the bulk.

BALANCE-SHEET ITEMS.

Turning now to the balance-sheet, there is practically no change on the debit side, except in the profit and loss account, which I have just explained. As regards assets, you will see that the cash at bankers and in hand has increased by nearly £300,000 to £627,391. This is mainly accounted for by a reduction of £325,000 to £111,000 in investments, and of £32,000 to £52,900 in railway and other loans in China, while shares in other companies have increased £77,000 to £311,000. If you compare the list of investments given on pages 4 and 5 of the report you will see that we have sold War Loans, and several Chinese securities have either been redeemed at maturity or disposed of on satisfactory terms. Practically the whole of the increase under the heading of shares in other companies is due to our larger interest in the Banque Industrielle de Chine and the Tientsin Wharf and Godown Company, to which I shall refer presently. With reference to the item of land and properties in China at cost, I indicated in 1918 our intention to dispose of our Tientsin yard, as it was not producing an adequate return on the capital invested. This has been done, and part of the proceeds invested in the Tientsin Wharf and Godown Company, who own the adjoining property and carry on a profitable storage business. Our purchase gave us control of that company, and we have installed the Fu Chung Corporation as managers. Since that date the profits have increased considerably, and after writing off liberally for depreciation the company was able this year to declare a larger dividend than ever paid before. We have still our properties at Hankow and Pukow, the total value being far above the book valuation.

Stocks of coal at valuation are, as usual, the stocks we have on hand at the price which the Fu Chung Corporation were paying us at that date. Mining and other stores at cost show an increase of about £45,000. Our proportion of profits in the Fu Chung Corporation shows an increase, which would, however, have been more pronounced had it not been for internal troubles in the Chung Yuan Company, whom, you will remember, are our Chinese partners.

THE COLLIERY AND DIVIDENDS.

I had hoped that before this we could have produced a profit and loss account for the colliery. For some time after I arrived in China there was no chance of discussing this question owing to general conditions. We, however, eventually got together on the subject, and Government representatives were appointed to meet us. Nothing definite has as yet been arranged, but I am hoping that a satisfactory agreement will be come to shortly, both in the interest of the Chinese Government and ourselves. Negotiations were still proceeding when I left China between our agent-general, Mr John P. Kenrick, and the Government representatives. Until this question is settled it is inadvisable to discuss the question of a dividend.

I told you in December, 1918, that, barring unforeseen accidents, from then onwards the colliery would show substantial profits. I am sorry to say that the unforeseen accidents occurred. The volume of water in the mines increased beyond expectations, and with the delay in the shipment of the necessary machinery to enable the engineers to cope with the difficulty came naturally an anxious and expensive time. The delay in the delivery of the plant was unavoidable owing to labour and other conditions here, of which you are all aware. The consequence was that coal of excellent quality that could have been sold at a good profit had to be burned under the boilers to raise sufficient steam pressure to avoid the loss of the collieries.

To give you an idea of this increased cost, I may mention that the pumping charges for the first six months of the period under review were $1.336 per ton of output, compared with $0.842 for the corresponding period of 1918. The quantity of water dealt with was approximately 520,000 gallons per hour, an increase of practically 100,000 gallons per hour on the quantity raised in the previous year. I am pleased to say there has been no further increase since then, and, with the completion of the new plant, no difficulty is anticipated in dealing with this amount at a reduced cost.

AGENT-GENERAL'S REPORT.

In connection with this, perhaps I had better read to you our agent-general's report, dated May this year, on the subject. It reads as follows:—

"In my report of September 30th last, under the heading of "Prospects," I stated as follows:—

"With the arrival of the new plant which is now on the way out here, the collieries will not be subject to the frequent interruptions caused by the shutting back of the water underground, and the areas which are now reserved for standages will be opened out for production, thereby effecting an immediate increase in the output. Further, the flooded workings of No. 2 pit will be recovered and put on a producing stage, and the winning of the virgin area south of the pits, which, owing to the water difficulty, has had to be postponed for the last five years, will be taken in hand, and, providing no new feeders are encountered, an output obtained therefrom in from 12 to 18 months' time. In addition to the above, there is the development of the Li Feng area, from which a considerable output of coal will shortly be produced, at a cost that, at the present selling price, will leave a fair profit. Therefore, providing we are not interfered with by political intrigues, and that the existing market conditions for the sale of our coal continue, the immediate future of the collieries is very promising.

"I am still of that opinion, for although the delay in the arrival of the new plant unfortunately has caused a set-back from which it will necessarily take a little time to recover, the developments now in hand should, within the next few months, place the production of the collieries on a satisfactory basis, both with regard to quality of output and cost, a position which it should not be difficult to maintain for many years to come."

LI FENG DEVELOPMENTS.

Developments of an important character are taking place at Li Feng, which is about four miles west, and slightly north of our main shafts. In December last the arrival of the much-needed boilers allowed us to continue the delayed sinking of the main shaft, which cut the seam at a depth of 311 feet. I cannot do better than read you what our agent-general reports on the subject in May this year. He writes:—

"The coal is very hard and of excellent quality. The seam has also been cut in the two drifts where it was found of equal hardness and quality to the coal proved in the shaft. This confirms the opinion I have previously expressed of this field containing a large area of coal of excellent quality. The drifts prove that the measures dip at a much flatter angle than was originally supposed, approximately probably nearer 1 in 7½ than 1 in 5. Every effort will now be made to push forward the development here to the production stage in order to secure as large an output as possible for next winter's trade. Our operations from the main shaft have drained the water from a number of native pits lying to the north thereof, and the sinking of these pits is now being resumed. In addition, negotiations are in progress to reopen and sink about 50 pairs of pits, so that we can confidently anticipate a very large output from this district when the operations are in full swing."

A tramming line has been laid from this district to the Tao Ching Railway, where all arrangements have been made for a preparing and loading wharf, at which the production will be handled.

The following highly satisfactory cablegram arrived from Mr Kenrick a few days ago:—

"Situation at mines considerably improved. New power plant practically completed and three new pumps installed ready for operation. Li Feng developments proceeding satisfactorily. Coal is of excellent quality and a large output assured for many years. Twenty-eight native pits have renewed sinking operations, many being very close to coal, and we are receiving applications daily for permission to open up many more."

RAILWAY CONCESSIONS.

As evidence of the difficulties one experiences in China in bringing business to a conclusion, I may mention that it is only during the past three months that we have been able to definitely fix the terms of the concession granted to us in 1914 for the construction of the railway extension to Huaichingfu and Meng Hsien. Work will be commenced this year, and the opening of the line to traffic should be of considerable benefit to all concerned.

The further extension to Pingyangfu, for which we have the concession, is now under consideration. During my last stay in China I went over the proposed route on foot, making a round trip of about 450 miles through a country offering great possibilities. Notwithstanding repeated warnings from certain quarters as to the supposed ill-feeling towards the syndicate, my journey was without unpleasant incident; in fact, I found the officials and natives quite friendly disposed and interested in the proposed construction.

POSSIBILITIES IN SHANSI PROVINCE.

You will, I am sure, be pleased to hear that our relationship with the Governor of Shansi Province is now most amicable. Tuchen Yen is recognised by all who know him as the most progressive Governor in China, and during my trip to Pingyangfu, and in the many visits I made to the capital—Taiyuan Fu—I had ample proof of his great endeavours in many directions. His efforts at roadmaking, forestry, education, and the suggested opening upon joint account with foreigners of the mineral wealth of the Province will bestow lasting benefits on his people. Many of you are, of course, aware of the history of the Retrocession Agreement of 1908, by which this syndicate resold its rights in Shansi, with the

stipulation that should the provincial authorities desire to use foreign capital in the opening up of its mineral resources and for the building of railways to transport the production we should be given first right.

COMMERCIAL AVIATION IN CHINA.

At the last meeting I had the pleasure of addressing you I announced that we had been appointed agents for several well-known firms, such as Handley Page, Limited, Marconi Company and Siemens. You will have read of our sale to the Chinese Government of six large Handley Page machines. We have also placed orders since then for a few smaller machines for training purposes. An aviation school has been started a few miles outside Peking, with Handley Page representatives in charge. The Chinese take very kindly to aviation, and will make excellent pilots. Commercial aviation in China is feasible. The greatest drawback to China at present is lack of communication, and anything that tends to improve that position is of the greatest assistance to her. In countries like England and America, where the roads and railways are good, and allow of rapid communication, commercial aviation has to face serious competition, but in China, where distances are great and roads and railways practically do not exist, and even on the inadequate railway system the fastest train only averages 25 miles per hour, aviation has more than a chance. In my opinion there is a big field there for British manufacturers, but there is serious competition to be faced from other nations who recognise the position, and while British manufacturers are being cramped by our own authorities on the ground that the machines wanted by the Chinese Government are for military use, and, therefore, under the agreement between the Powers such material must not be supplied, other nations take a less strict view, and, in my opinion, very rightly so. Aeroplanes without guns are no more war material than horses which might be used for cavalry or other purposes. Their use for passenger and mail carrying was proved by us in May last, when we made the first passenger and mail trip from Peking to Tientsin and back, and had the great honour of carrying His Majesty's Minister, Sir Beilby Alston, the British Commercial Attache, Mr Archibald Rose, and some leading business men in Peking, 15 passengers in all. Sir Beilby was the first Minister to fly in China, and well deserves all the credit we can give him for his enterprise, which gave the Chinese the proof necessary of the belief the British have in the reliability of their machines.

It is perfectly plain that this agency and trading business can be much improved by the formation of a separate company co-operating with the Chinese, to be managed in China. This company is in course of formation, and will have sufficient capital to carry on its business, even to the extent of financing Government and local enterprise. You will have a certain number of shares allotted for the purchase of your existing agencies, and the board have decided to take a further interest against cash. I am returning to China on September 25th to take charge of this company, as well as to assist our Agent-General, Mr J. P. Kenrick, in the many other enterprises we are undertaking.

BRITISH TRADE WITH CHINA.

An excellent pamphlet has recently been issued by our Department of Overseas Trade on the conditions and prospects of British trade with China, compiled by Messrs Fox, Rose and Brett, the British commercial representatives in China, and those of you interested in the subject will find it most interesting. There is, however, one point in particular on which I beg leave to differ from these gentlemen. They say, "China's local factory products will in time compete with imported goods, but there would appear to be little reason for British manufacturers to fear this competition for many years to come, as the native factories will certainly devote their attention mainly to the production of the cheaper goods, and as the general prosperity of the country advances, there should be a growing demand for imported articles of a higher quality than can be supplied locally." If these local factories were entirely Chinese, perhaps the serious competition with imported articles would be likely to be delayed, but there is a distinct tendency on the part of the Chinese to join hands with foreign manufacturers, and in my opinion such enterprises will become serious competitors from the time they start producing. Such factories can produce goods of the quality demanded by the people at the various stages of their advancement, and would have every chance of successfully competing with most imported articles, particularly as the pamphlet rightly states, "almost every form of raw material known in commerce is produced in China," and "China's mineral resources, if fully exploited, would furnish all the raw material required for the full development of her engineering, shipbuilding and similar industries. Labour is plentiful and cheap." In England to-day the motto of the workmen appears to be "more money and less work," whereas the only salvation of the country is increased production, so as to leave a good surplus for sale abroad. Unless this country gets a move on, it will find that foreign manufacturers will, either by co-operation with the Chinese, or by giving some serious consideration to the Chinese markets, so firmly establish themselves in that country as to make business for us much more difficult than ever should the time arise when they are either in the mood or position for Chinese trade. The Chinese are well disposed towards the British, and would, I think, prefer to deal with them on anything like equal terms, but our prices are so much higher and deliveries so much slower that it makes business almost impossible. I saw a case shortly before I left where railway material was purchased from America at about half the price quoted from this country. If that material is up to specification, English firms cannot hope to compete under present conditions and prices. Our new trading company will carry out the policy of joint working with the Chinese in whichever direction appears the most suitable.

BANQUE INDUSTRIELLE DE CHINE.

The Banque Industrielle de Chine continues to make excellent progress. They have now 22 branches open, including ten in China, one in Eastern Siberia, one in Japan, three in Indo-China, one in the Straits, three in France, one each in England, Belgium and America. To give you an idea of the progress made, I cannot do better than quote in round figures from their report on the financial year of 1919. The total of their balance-sheet was :—

On December 31.	Frs.
1914	98,000,000
1915	100,000,000
1916	162,000,000
1917	247,000,000
1918	380,000,000
1919	1,089,000,000

The current and deposit accounts ran from 124 in 1914, representing 1,148,000 francs, to 20,000 in 1919, representing 675,000,000 francs; the bills receivable account from 45,000 francs in 1914 to 235,000,000 francs in 1919; advances on goods account from 31,000,000 francs in 1914 to 282,000,000 francs in 1919. The reserves and profits carried forward increased from 16,000 francs in 1914 to 16,000,000 francs in 1919. The capital of the bank has since been increased to 150,000,000 francs, the new issue being a great success.

In 1918 I announced an arrangement with the Eastern Pioneer Company, which was based on a letter from them confirming a verbal understanding. At the last moment one of their members, who has a large share interest in that company, repudiated the business, which we allowed to drop, publishing for your information the correspondence that passed between us. As a matter of fact, nothing has been lost to us by the cancellation of the understanding.

Since the formation of the Chinese Mining Corporation we have investigated many properties and are still continuing negotiations. We have secured a permit for the exploration of petroleum, and as soon as general conditions in China allow we hope to start working.

THE BOARD'S POLICY.

Summing up the position of this company, I must say that the more I see of China the more I am convinced of its possibilities, particularly on the lines of co-operation with the Chinese. The delays are annoying, and I fully sympathise with the shareholders in their natural desire for dividends, but I venture to suggest that the board's deliberate policy of building up a large cash position has been perfectly sound, and it is one you will appreciate a little later. Instead of having to search the country for money to carry out the various enterprises we have in view, and under present conditions with almost certain failure to secure support, we have a large cash balance which will enable us to undertake business that would otherwise be lost to us.

Our consulting engineer is on his way to China to report and advise on our properties, but his representative, Captain Sproston, is here and will answer any technical questions that you care to put to him. If you wish any further information from me as to the position of our affairs in other directions, I shall be pleased to do my best to satisfy you.

In conclusion, I wish to place on record my appreciation of the untiring energy of our agent-general, Mr J. P. Kenrick, and his assistant, Mr G. W. Frodsham. The other members of the staff, both at the mines and elsewhere, also deserve our thanks.

I now beg to move :—"That the report and accounts for the year ended June 30, 1919, be and the same are hereby adopted," and will call on Mr Berthelot to second same.

Mr André Berthelot (managing director) seconded the resolution.

In reply to a question, the Chairman said that he did not think it would be possible to publish the colliery output every month, but he saw no objection to publishing it more frequently than they did at present if the shareholders so desired.

The resolution was carried unanimously.

Mr Berthelot then moved the re-election of the retiring directors, Mr T. A. Barson, Colonel Brinsley, J. H. FitzGerald, C.B., and Comte de Seguier.

M. Renè de Cèrenville seconded the motion, which was unanimously agreed to.

The auditors (Messrs Cooper Brothers and Co.) were reappointed, and on the motion of M. de Cèrenville, seconded by M. Henri Lejeune, it was unanimously resolved :—" That the directors be authorised to pay to Mr T. A. Barson, the chairman of the company, in respect of his extra services and special exertions in China, additional remuneration calculated at the rate of £2,000 per annum, free of income-tax.

The proceedings then terminated.

ARAMAYO FRANCKE MINES, LIMITED.

SATISFACTORY RESULTS.

NEED FOR CAUTIOUS POLICY.

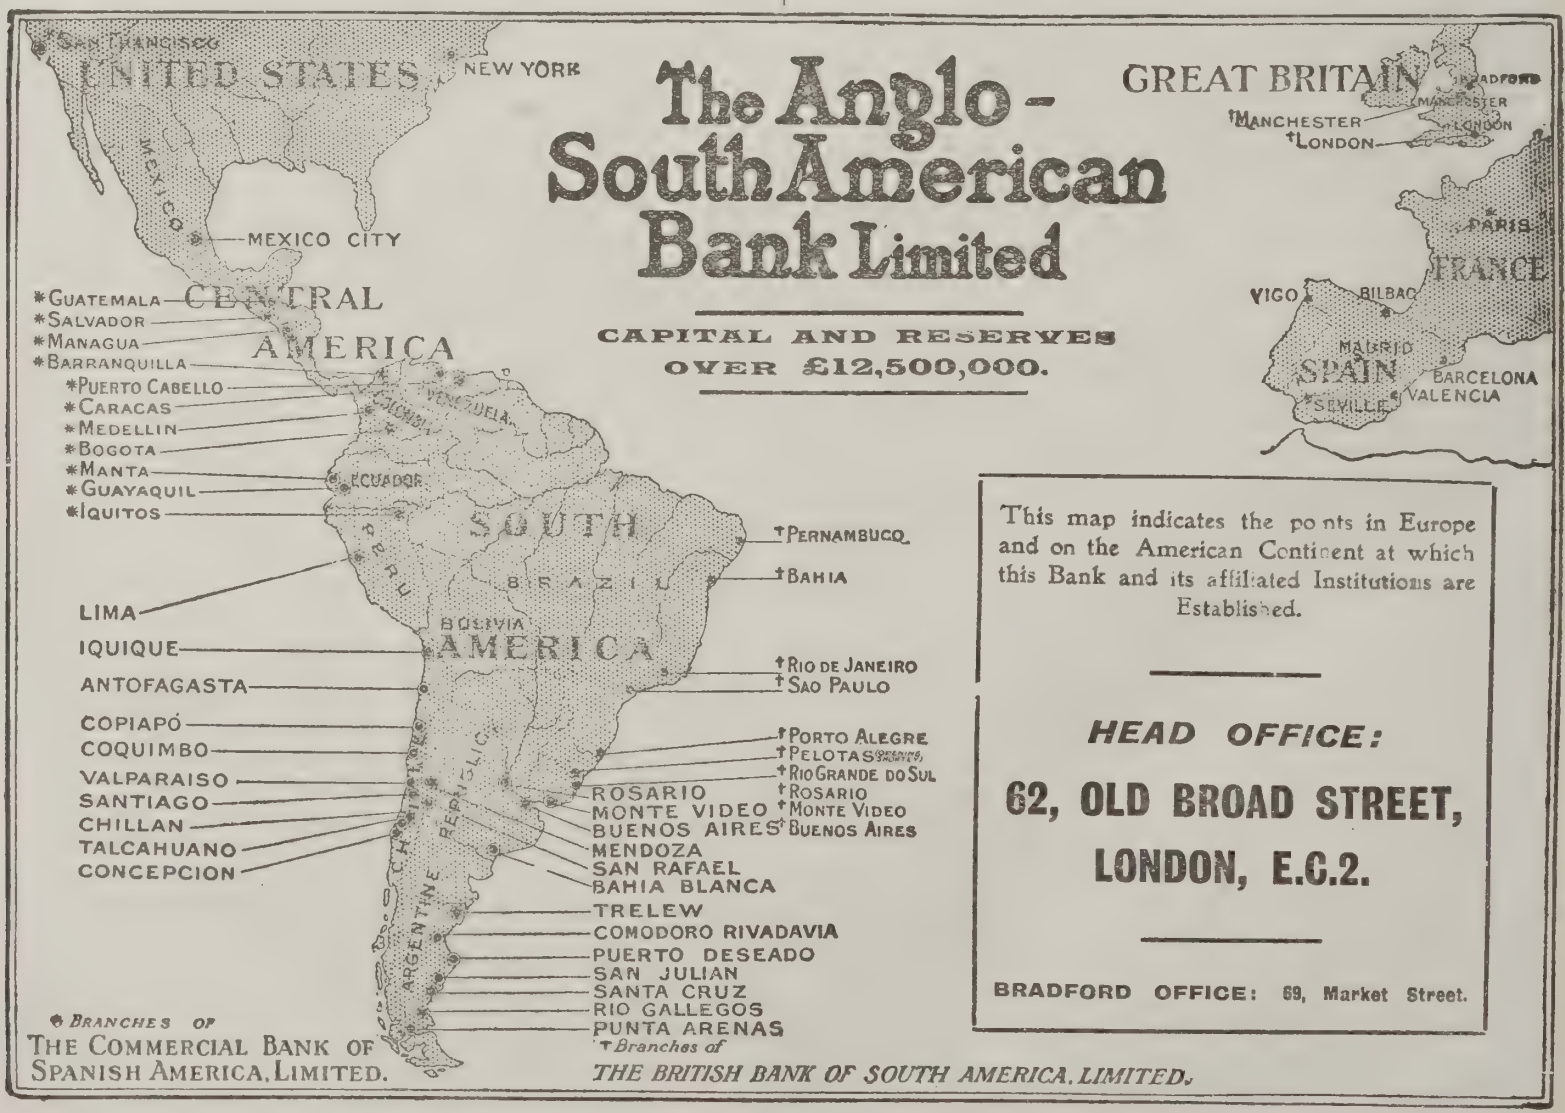
The adjourned fourteenth ordinary general meeting of the Aramayo Francke Mines, Limited, was held, on the 16th instant, at 148½ Fenchurch street, London, Mr. Bernard Dale presiding.

The secretary (Mr H. F. Ings) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that in view of a recent announcement, he could have wished that Mr Aramayo could have been present at the meeting, but circumstances had otherwise ordained, and all they could do was to request the secretary to convey to Mr. Aramayo their congratulations upon his appointment as Minister Plenipotentiary to the Republic of France and as the delegate representing Bolivia on the Council of the League of Nations.

INCREASED PROFITS.

The Chairman then proceeded to read the annual report received from Mr Aramayo, in which he stated that the accounts covered a period of 19 months, and it was gratifying to him to be able to point out that the results of that period compared favourably with those obtained during the previous year. The revenue account showed a net profit of £667,121, or an average of £421,339 for 12 months, as against £274,148 for the preceding year. The principal cause of that increase had been the realisation at good prices of accumulated stocks of materials.



The total sales of black tin reached 4,149 tons, or £617,187, during the first 12 months, as against 1,607.6 tons, or £180,992, and the sales of the last seven months had amounted to 723.3 tons, or £82,451. The sales of wolfram had decreased to 135¾ tons, or £26,989, during the first twelve months, as against 210.4 tons, or £38,214, and during the next seven months had been reduced to 95.1 tons, at an average price of £185 14s 5d per ton. The sales of silver sulphides equalled 382,727 ounces, or £77,763, for the first twelve months, as against 300,864 ounces, or £54,500 in the previous year, and during the last seven months the sales were 223,376 ounces at a further increase of 13.45d per ounce. Sales of bismuth during the first twelve months were reduced by £41,009, although the average price was 1s 2½d better, and the sales corresponding in the last seven months had maintained the proportionate rate.

Notwithstanding the continued rise in the price of materials, the cost of production of black tin had not risen more than .33 bolivianos per metric quintal over the high price reached in the previous year, but bismuth had increased by more than .8 bolivianos per kilo.

With regard to the work done during the first six months of the present financial year, the output of black tin had decreased by 192¾ tons as compared with the same period of last year, that of wolfram by 78.3 tons, and that of bismuth by 81.28 tons. On the other side there had been an increase of 168,480 ounces of silver in the form of export ore and 88,082 ounces in the forms of sulphides and copper cement.

PENDING LITIGATION.

The report, read by the Chairman, went on to say: Before closing it is my duty to bring to your notice the uncertain position of our finances and standing on account of pending litigation. It will be remembered that in August, 1916, we decided to change our domicile to Geneva, where a purchasing company was registered, to which we sold our undertaking, and which constituted a board of directors, established an office, and have since been paying local taxes, &c., in expectation of a prompt settlement of affairs in England. The Public Trustee prevented the completion of this contract on the ground that by going to Switzerland the company might, under pressure of enemy Governments, be forced to sell to enemy hands our metals, which "were extremely valuable to the British Government," although we offered every possible security that such would not be the case, and that the metals would continue to be shipped to England, our only object in changing domicile being to avoid what we considered excessive taxation. The Court appointed a controller, with, apparently, the sole object of preventing our going to Switzerland, but he had access to the accounts, minutes, and affairs of the company, and presented periodical reports. It will also be remembered that we were afterwards legally advised to alter our articles of association, and place all the management of the affairs of the company in the hands of a local board in Bolivia, which we did, to avoid a taxation which we did not consider fair in our case.

INLAND REVENUE'S ATTITUDE TOWARDS THE COMPANY

Under the circumstances the Commissioners of Income Tax thought, in accordance with established precedents, that they had no right to assess the company, but have lately, it would appear, decided to assess them in the name of the firm of Avelino, Aramayo and Company, as their agents. What I cannot understand, and I think you will bear me out in this, is that the company should be held under British jurisdiction against their will by reason of the war, and yet compelled to pay income-tax, and, forsooth, any other burdens imposed for the time being upon British subjects, as if of their own accord the company had consented to remain under British jurisdiction.

PUBLIC CUSTODIAN AND DIVIDENDS TO GERMAN RESIDENTS.

This is not all. Lately the company has for the present been adjudged to account again to the Public Custodian for the dividends already received by the shareholders residing in Germany. The case is a hard one, and I must put it before you. It will be remembered that at the outbreak of the war the company had large stocks of minerals in Germany which were being realised by their agents, under the control of our former co-director, Mr Michaelis Braun, a Bolivian by birth. In January, 1915, a first dividend was declared by your directors, with my approval and consent as sole managing director, under the articles of association, and with the full knowledge of the Board of Trade, subject to the conditions that "as regards shareholders resident in Germany, Austria-Hungary, and Turkey the dividends should be payable only out of assets in Germany and other shareholders only out of assets in the United Kingdom." Subsequent declarations of dividends were declared in like form, save that after the constitution of the local board the necessary variations were made. Now, after the lapse of five years, a claim has been lately introduced against the company by the Public Custodian that all dividends which have been declared on the shares belonging to enemy shareholders should be paid to him.

THE COURT'S DECISION.

The court so far has held that the resolutions of the directors were good, so far as they directed payment of dividends, but were invalid so far as they imposed conditions as to the dividends being payable out of certain funds to some shareholders and out of other funds to other shareholders, which it was assumed to be beyond the powers of the directors. But whatever the legal interpretation of the powers of the directors may be, I consider that the exceptional situation created by the state of war has been ignored, and still more the unique circumstances of this case, resulting in a monstrous injustice. The company, assuming that on the further consideration of the case the finding of the court is not modified, is condemned to pay in England between £70,000 and £120,000, and to recur against Mr Braun, who is supposed to have exceeded his authority, and committed a blamable act. Let us be fair with him. He had the control of all the funds belonging to the company as the result of sale of metals which were being gradually made in Germany, and he knew at the same time of the existence in Germany of certain creditors of the company, including himself, as the result of dividends declared to the shareholders. He thought that the best way to safeguard the funds and serve the interests of the company was to apply them to the satisfaction of those credits, and proceeded accordingly in the absence of all communication with London. As sole managing director of the company's business I have no hesitation in approving of his action, believing, as I sincerely do, that he acted for the best, and from motives absolutely free from suspicion.

Mr L. A. Kensington seconded the resolution, and it was carried unanimously.

The formal business was duly transacted, and a vote of thanks to the chairman and directors terminated the proceedings.

AMALGAMATED TEXTILES, LIMITED.

10 PER CENT. INTERIM DIVIDEND.

The statutory meeting of the shareholders of Amalgamated Textiles, Limited, was held on the 14th inst., at Winchester House, Old Broad street, London, Mr T. Henry Morris, D.L., J.P. (the chairman), presiding.

The secretary (Mr S. J. Gordon) having read the notice convening the meeting and the auditors' certificate,

The Chairman, in the course of his speech, said :—Gentlemen,—I am pleased to report to you that the two concerns—William Morris and Sons, Limited, and John H. Beaver, Limited—continue to make satisfactory progress. Doubtless it is well known that recently there has been a heavy fall in the value of all classes of wool to an extent of from 30 per cent. to 50 per cent., which has so far been met without any serious difficulties in the trade. It is greatly to the advantage of the industry and the consuming public that we should be able to move back to pre-war conditions and values at an early date. The world is bare of all commodities, and especially clothing. The demand for wool products is ever growing, and as it will probably be some years before countries like France, Germany, and Belgium can secure their pre-war output there must be a large demand for supplies for our own country and the Empire beyond the seas, especially if exchange difficulties could be satisfactorily arranged, from every country in the world. In such circumstances the prospects are bright if the workpeople will lend a hand and do their best to increase the output and take advantage of prosperous times. Given peace at home and abroad, the prospects are good, and the company should have a prosperous time before it.

At an early date—probably the end of October or beginning of November, a date which may depend upon whether there is a coal strike or not, and other like circumstances—it is the present intention of your directors to distribute some of the profits, and I am authorised by the board to say that we contemplate declaring an interim dividend of 10 per cent. to all shareholders who will then be upon the company's register. This dividend will correspond roughly to the first half-year's working of this company; in other words, we have it in mind that we are in a position to distribute profits at the rate of 20 per cent. per annum on the ordinary share capital of the company. The object of this company is to acquire or buy interests in the shares and securities of companies or firms which possess combing and spinning mills. At the present moment we are in negotiation for the acquisition of an important spinning business on terms which your board regard as highly satisfactory.

No questions being asked, the proceedings terminated.

SCOTTISH UNION & NATIONAL
INSURANCE COMPANY.
ESTABLISHED 1824.

FOREIGN BANK RETURNS.

Owing to variations in rates of exchange, it is our intention to show in future the position of the undermentioned banks in their national currency. The position of those banks which are still shown in sterling we hope in the course of the next few weeks to give in the currency of their own country.

† Rates lowered ½% on Jan. 2, 1918, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ½% on Nov. 6, 1919, and 1% to 5% on April 15, 1920. ‖ Lowered from 3¼% to 3% on June 5, 1918, but was raised to 3¼% on July 31, 1919, to 3⅜% on Oct. 6, 1919, to 4¼% on Nov. 6, 1919, and 5½% on April 15, 1920. * Changed from 4⅜% to 4% on Dec. 27, 1917, and from 4% to 3½% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 15, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4½% to 5½%, and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months' Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

Total value of imports o gold	25,114	Total declared value of ex ports registered in the week	1,636,863

Messrs Samuel Montagu and Co. write on September 16th as follows :—" Gold : The Bank of England gold reserve against its note issue is £121,557,845, a small increase of £2,635 as compared with last week's holding. The s.s. " Saxon," which was to have brought over a consignment of gold, has met with a mishap at Cape Town, As a consequence, no gold was obtainable in the market this week, and it is not anticipated that any supplies of South African gold will be available before the 24th inst. It is reported from New York that $250,000 and $50,000 in gold have been shipped from that city to South America and Cuba respectively. On the other hand, $11,800,000 in gold is reported as having been received from London. The Transvaal gold output for August, 1920, amounted to 702,083 fine ounces, as compared with about 736,099 fine ounces in July, 1920, and 706,669 fine ounces in August, 1919. Silver : This week has seen a reaction in the downward movement of the quotations. The weakness of the American exchange brought China into this market as a buyer, and inquiry from this quarter has been in evidence throughout the week. Indian operators also have been active in covering bear sales. In a narrow market, these factors were bound to have an effect, which was evidenced by a continuous rise in the quotations, perhaps a little out of proportion to the actual volume of business. To-day, however, owing to a recovery in the American exchange and China consequently holding off, there occurred a relapse of $\frac{1}{4}$d in both quotations.

INDIAN CURRENCY RETURNS.
(In Lacs of Rupees.)

	Aug. 22, 1920.	Aug. 31, 1920.	Sept. 7, 1920.

NOTICES.

The National Bank of South Africa, Limited, announce that a branch of the bank has been opened at Malmesbury, Cape Province.

The directors of Hannevigs Bank, Limited, announce that the sanction of the Board of Trade having been obtained, the title of the bank will now be altered to " British American Continental Bank, Limited." John Blair MacAfee, Esq., of Messrs MacAfee and Co., merchant bankers, 5 Copthall court, E.C. 2, has been elected chairman of the bank. The authorised capital of the bank is : 500,000 shares of £5 each, £2,500,000 ; the subscribed capital, £1,242,360 ; the paid-up capital, 247,672 shares of £5 each, 25s paid, £309,590 ; 800 shares of £5 each, fully-paid £4,000, £313,590. In view of the bank's growing business the directors have decided to call an additional 15s upon each share of stock now outstanding, and this call will increase the paid-up capital to £500,000.

The directors of the Alliance Bank of Simla have appointed Mr L. A, Davis to be general manager of the bank. Mr Davis has been deputy-manager of the foreign department of Barclays Bank, and only recently relinquished the duties of financial adviser to the Overseas Trade department.

The National Provincial and Union Bank of England, Limited, announce that a branch has been opened at 110 Wardour street, W. 1.

The directors of Lloyds and National Provincial Foreign Bank, Limited, announce that a branch of the bank has been opened at 71 Haymarket, London, S.W. 1.

Reports and Notices.

The Hon. Sir Thomas Mackenzie, G.C.M.G., late High Commissioner for New Zealand, has been elected to a seat on the board of directors of the National Mortgage and Agency Company of New Zealand, Limited.

Messrs Coutts and Co. will pay on and after October 1st the coupons of the Peruvian Corporation, Limited, first mortgage 6 per cent. bonds at the rate of 4 per cent. per annum, in accordance with the resolution passed at a meeting of the holders on March 12, 1896.

WALFORD LINES.—The directors of Walford Lines recommend a final dividend of 6d per share, less tax, on the "A" shares, and a proportionate dividend on the "B" shares; this, together with the interim dividend already paid, will make 10 per cent. for the year on the "A" shares. Taking into consideration the dates on which the calls were made the yield is considerably higher.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Harvesting is practically completed in Southern districts, and operations are proceeding steadily in other parts of the United Kingdom. Official reports describe the crops in the Eastern part of the country about up to average, but in the West prospects appear less favourable. Supplies of native wheat are coming forward more freely, and find ready buyers at the maximum price of 95s for well-conditioned lots. Imported descriptions, chiefly North American grades, move off steadily at regulation rates. Crop reports from most exporting countries are generally satisfactory, except, perhaps, India and Argentina, where further moisture is needed. There is a fair demand for all makes of flour, English ruling at 63s 6d per sack, ex mill, and imported grades 64s to 65s 9d per sack of 280 lbs, ex warehouse. From the 18th inst. the price of flour will be advanced by 22s 6d per sack. Maize firm, in sympathy with higher c.i.f. offers occasioned by moderate Argentine shipments and dearer freights. Plate, old, ex ship, 72s; new, ditto, 74s 6d; old, landed, 74s 6d; and new, ditto,

* Accounts for half-year. † Free of tax.

77s 6d. On c.i.f. terms, cargoes of La Plata, early September loading, changed hands at 72s to 73s; late September, 71s 9d to 72s 6d; early October, 71s 6d, 72s; and afloat, 72s 6d, 73s. Bessarabian, afloat, 73s; Galatz-Foxanian, afloat, 72s; Dan/Gal/Fox/Bessarabian, September 15th-October, 75s (per 492 lbs). Parcels of Plate were dealt in, August-September, 71s 6d to 71s 9d; September-October, 69s 6d, 68s 6d, 69s 9d; OctoberNovember, 67s to 68s 3d, all per 480 lbs. Barley generally slow, but late rates fairly maintained. Native malting moves off quietly, the inquiry being chiefly for the lowest and medium grades. Best lots rule up to 100s, and useful sorts 86s to 90s per 448 lbs. Of imported, Californian quoted 100s per 448 lbs, ex ship. Canadian Western No. 4, 73s ex ship; 76s landed. Australian, 97s to 105s. Canada feed, 72s 6d, ex ship, 74s landed. Plate, 73s 6d ex ship, and Danubian, 71s, ex ship, per 400 lbs. On c.i.f. terms, a cargo of Dan/Bess/Kustendji, shipping or shipped, sold at 70s; ditto, afloat, 71s Oats firmly held, with a fair demand for native descriptions. New whites quoted 65s to 68s; greys, 58s to 60s per 336 lbs. Of imported, Plate, 54s, landed; Canadian, 63s, ex ship; 66s 6d landed; and Norwegian, in latter position, 67s per 320lbs. Forward business included Plate, f.a.q., afloat, at 49s 6d to 50s; July-August, 50s 9d; August-September, 49s 6d to 51s 6d; October-November, 50s to 51s per 320 lbs. Peas quiet. English small blues, 100s to 105s; maples, 110s to 115s per 504 lbs. Japanese, 32s; and Chinese white, 21s cwt. Beans firm. English, old, 85s to 90s; new winter, 82s to 85s per 532 lbs. Oatmeal firm, unaltered. Homeward grain freights firm, with a moderate quantity of tonnage taken up at full rates from the River Plate up river ports for maize at 110s September, 105s October, and 103s 9d per ton early November to U.K./Bordeaux-Rotterdam range, while American vessels were chartered at 18 to 19 dollars up river to Continent direct, October. North America quiet, and tonnage not attracted owing to better rates ruling in the coal trade. Montreal or Northern range, American ports, quote 11s 6d quarter, U.K./Continent, 13s 6d Italy, with Gulf loading at 13s and 15s per quarter respectively. India steadier, and in view of reports that the embargo on grain exports would be relaxed from end of October next, an improved tone was apparent. A steamer from Bombay or Karachi to U.K. was fixed at 75s, one, or 80s two ports of discharge, November loading, on dead weight basis. Australia dull, and rates easy at 120s, October-November, to U.K./Continent. Danube grain moves at 57s 6d to U.K./Continent, September-October. Time charter shows an improved inquiry, and rates inclined to go firmer, large vessels being wanted at 14s to 15s per ton per month for twelve months' trading.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1920-21, contrasted with 1919-20, 1918-19, and 1917-18.—(Particulars of imports of wheat and flour temporarily discontinued):—

THE IRON AND COAL TRADES.

Our Glasgow correspondent writes:—The current of business in all iron and steel connections continues to be much disturbed by the serious and unfortunate industrial dislocations threatened. Opinion in informed quarters is much at variance as to whether a strike will actually take effect at the end of the month, and while many experts are satisfied that affairs will yet be amicably arranged, nearly every branch is preparing for the worst, and accordingly almost no new business is being entered on. Here and there stocks of fuel have been accumulated, but in general none of the big iron and steel works are making preparations to pull along for any time should the miners down tools on the 27th. Meantime, productive operations are proceeding as actively as has been the experience for months, and a very heavy tonnage is going through on all hands. Pig-iron makers are giving full deliveries of ordinary brands and of hematite to home consumers, who besides are drawing freely on Middlesbro' for supplies of both foundry and forge sorts. Export inquiries for Scotch are very pressing, but these are far from adequately met by the 10 per cent. proportion of make allowed to be shipped. Last week 160 tons were liberated for South American ports, but there are some larger amounts loading in the Clyde. Shipbuilding keeps very busy, but no new boats of any

THE BANK OF TAIWAN, LIMITED.

J. B. DONELLY, D.S.O., *Manager.*

size are on offer. Some merchants are tendering respectable amounts of steel sections on behalf of Belgian and German firms, and at prices which would probably lead to trade if conditions were normal.

Our Sheffield correspondent writes :—The unsettled labour situation has intensified the slump in buying, which now extends to all branches of iron and steel, as manufacturers are unwilling to commit themselves in any way. As regards open-hearth steel, however, the works have sufficient business on their books to keep going, and the same remark applies to saws, joiners' tools, files, and a number of other products. Makers of the expensive special steels are less fortunate, as they have neither orders nor work, except sufficient to run a day or two each week. Deliveries of open-hearth and steel are better than formerly, but still leave a good deal to be desired. The reduction of £5 on soft wire rods is enabling makers of common wire to lower their selling rates and meet foreign competition. No change has been made in the quotations for acid steel, makers of which are meeting with no competition from abroad. The home steel works, however, are keen on getting new orders for billets. Depression is rather acute in twist drills and cutters made of high-speed steel. There is plenty of business in plantation tools, sheep shears, scythes, and mechanics' hand tools generally. The demand for supplies of all classes of fuel is very active, and exports are largely suspended, except for bunkering. Works are putting as much steam coal into stock as they can get. House coals are in feverish request, and delivery is small compared with the booking of orders. Prices current per ton at pits are :—Best South Yorkshire hards, 33s 2d to 33s 8d; Derbyshire do, 32s 8d to 33s 2d; best Tyne steams, 150s to 160s (export); steam cobbles and nuts, 31s 8d to 32s 2d; washed smalls, 28s 8d to 30s 2d; small slacks, 23s 2d to 24s 2d; branch, 37s 2d to 37s 8d; best Silkstones, 33s 8d to 34s 8d.

Our Middlesbro' correspondent's report, dated September 16th, is as follows :—Pig-iron : The production of No. 3 Cleveland pig-iron is barely equal to the demand for home consumption, and none available for export. The lower qualities are rather more plentiful, but the same prices are asked as for No. 3, viz., 225s. Hematite is also very scarce, with only occasional parcels for export to neutrals. The home price for East Coast mixed numbers remains at 260s, with 5s more for neutrals. Manufactured iron and steel : New business is rather quieter, but works have plenty of orders to go on with. Steel ship plates, home, £24 10s; steel ship angles, £24; iron ship angles, £30 15s; iron bars, £30; steel rails, £25 net. Iron ore : The threatened coal strike is keeping buyers off the market, and only a small amount of business is doing. Sellers are quoting best Rubio at 47s 6d to 48s, c.i.f. Tees on 17s freight basis.

MANCHESTER, September 16.

The market has continued very quiet. There continues a general lack of confidence, and merchants are still disposed to restrict their commitments as much as possible. A rather more favourable feeling now prevails with regard to the outcome of the coal crisis, and it is believed that a strike will be averted. Cloth inquiry for India has been of fair extent, but only isolated transactions have been put through, chiefly for Madras, and manufacturers who have sold have had to accept very poor figures. Unhealthy advices have been received from China, and no trade of importance can be expected just at present. Rather better reports have come to hand from Egypt, with a few more sales. Demand has been about for West African outlets. Unemployment in many weaving towns tends to increase, and some cases are mentioned of distress amongst the operatives. It has been a slow week for spinners of yarn, and prices in both American and Egyptian qualities have favoured buyers owing to lack of support.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says :—Business in all sections of the wool textile industry remains very dull, and there is little in the present situation to encourage the hope that trade will develop in the near future. Already many firms, particularly in the woollen section, are working short time, and it is considered probable that organised short time will become general throughout the industry in the course of a few weeks. The lack of new orders in the piece trade is reacting on other branches, and at present there is not enough business passing to test prices. Quotations for tops and yarns are largely nominal, and when definite orders are offered most sellers are prepared to make concessions in the matter of price. Good average 64's tops may be quoted at about 7s, with 2-48's yarn out of the same quality at about 12s, but much depends on the position of the seller. Combing rates have been advanced on account of increases in wages and working costs, and it is expected that carbonising rates will be advanced as from October 1st.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

All accounts from Australia speak of exceedingly good rains in June. Practically the whole of the Commonwealth had responded to the glorious rains which had fallen, sheep values had sensibly advanced, and whereas previously the whole country seemed unable to avoid a very bad time, everywhere encouragement was met with, and with vegetation coming along at a splendid pace, the outlook has vastly improved for early spring lambing. The rains would also do the growing fleece an immense amount of good by washing out surplus dust and also stimulating a better growth before August shearing became general. On many properties shearing would be

late owing to a shearers' strike, but a cable received during the week intimates that the trouble has ended, and flock masters will be now very busy indeed shearing sheep. Ever since June there has been almost a continual rain falling, the report published this week by the Australian Government representatives clearly indicating there is still plenty of rain about. It is considered that the spring and summer season is fully established, and given plenty of feed and water, pastoral conditions should be highly favourable.

We are now within measurable distance of the opening of the Colonial sales, Adelaide being due to open on October 1st. Altogether 100,000 bales are to be offered at the different selling centres in Australia during October, this affording a fair test of what the market will be like. There have been no public sales since about November, 1914, and there is little to go by in forming an estimate of what is likely to happen. At the same time Australian selling prices will be entirely governed by values ruling at Bradford and Roubaix, and current prices for tops are not much guide. There has been a fair amount of selling forward in Bradford for December and later delivery on a 6s basis, and sensibly under, and it can be taken for granted that French buyers, in face of big weights of wool to be catalogued, will not be keen to exceed the values of home trade buyers. There are some who say that wool will be bought on a 5s basis for 64's tops landed, Bradford, before Christmas, but that remains to be seen. Anything approaching that level means that London values must sensibly depreciate, and this is what many are expecting.

Another series of sales are due to open in Coleman street next week, but in many centres there is anything but a confident feeling as to what the results will be. The outcome of the threatened miners' strike is bound to affect the market, and no one will be surprised if most of the last sales' advance in merinos is lost.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

As anticipated in this report a week or two ago, the value of hides has gone down. Best ox dropped ½d-1⅛d at Thursday's Bermondsey market, the price ranging from 12⅞d for best and 11d for seconds. Cows also fell ⅛d-¾d, and heavy calf ⅜d per lb, light showing no change. Lambs were practically unaltered, but pelts dropped 3d-6d each. The demand for foreign hides is quiet, and tanners are only buying at concessions. Fregorifics are barely steady at about 53½. This week's American cables report the Chicago hide position as steadier, with heavy packers quoted at 28 cents. Bogota drys are selling on a basis of 25½ cents. The Indian hide market is weak, with values still falling.

The leather trade has again fallen off, and the small spurt of a week ago seems to have petered out in view of the coal strike menace. Prices of sole leather are weaker, as tanners have heavy stocks on hand, and offal is now being offered at very low prices. What trade is passing is done in 10 to 14 lb bends, which are fairly firm in price.

Little is doing in upper leather, and there seems no standard of values, consumers making almost absurd offers. Good-class glacé and patent seem wanted, but at buyers' ideas of value.

Shoe manufacturers are as dull as ever, and many of the factories are working only a day or two a week. Ladies' evening shoes are selling freely, as are football boots.

The leather trade this week has been startled by the news of a very large amalgamation, Messrs Samuel Barrow and Brother, Limited, and Messrs Hepburn, Gale and Ross, Limited, of Bermondsey, having decided to combine forces. The capital will, I understand, amount to two and a half million pounds, and the gentlemen who have built up these gigantic concerns will still hold responsible positions on the board.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

The newest feature in the oilseed market is the revived interest in soya beans, trade in which, since the beginning of the year, had been very small. Manchurian shippers are now offering freely, and English crushers, encouraged by the strong demand for soya oil for edible purposes and soya meal, have now entered the market in competition with Continental buyers, and are reported to have bought largely for shipment round £22 10s and £23. Cottonseed for the moment is quiet, and prices have reacted after the recent rise. A fair quantity of old Egyptian, on spot, passage, and for shipment, remains to be cleared, and for the latter positions £18 would be accepted. New crop Egyptian, of which reports are favourable, now offers at £19 10s for shipment, September-October, with Bombay round £14. Trade in linseed continues on small lines, Plate shippers showing more disposition to be doing business, though quotations are more than maintained on account of an advance in freights. Bombay linseed is hindered in getting down to the ports by inadequate transport, and shippers are disinclined to press business. Palm kernels are firm and dearer.

In the oil section, linseed oil is in slow demand, but values are firm and slightly higher in sympathy with seed. Cotton oils are largely neglected, though Bombay crude is firm at £60. Refined edible continues to meet American competition, and is quoted somewhat lower on the week. A good inquiry for crude and deodorised soya oil, ground nut oil, and palm kernel oil is reported, the latter having advanced £6 per ton in a week. The trade in castor oil and rape oil is poor, and quotations are nominally without change.

The August imports of oilseeds and oil nuts aggregated 106,323 tons, being 9,611 tons better than July, but comparing with 142,406 tons in August last year. Arrivals of Plate linseed fell away to less than 1,000 tons, and this accounted for a comparatively small import. Copra and ground nuts were a long way behind a year ago. Exports of oil manufactured in the United Kingdom were :—Refined, 1,155 tons; unrefined, 5,695 tons; against 228 tons and 10,018 tons in August last year, indicative of the poor demand there has been for oil on Continental account. Arrivals of oilseeds and oil nuts for the eight months (January-August) are well ahead of last year, aggregating 922,086 tons, against 891,652 tons, an increase of over 30,000 tons.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, September 17.

Several of the markets were rather featureless this week, and business, with the exception of foodstuffs, marked a falling-off both on home and export account. The rate of exchange with several near continental countries further moved against them, and such a situation naturally led to reduced purchasing on their part. There was rather a sensitive feeling at times owing to labour unrest, with manufacturers largely disinclined to exceed pressing requirements.

SUGAR.—As regards free parcels business proceeded with more freedom, and white Mauritius, sold, 117s; American granulated, 120s; crystallised West India, 100s to 103s as to sample; fine syrups, 80s; Jamaica muscovado, 70s to 72s. There is improvement in demand for American syrup, and quotations are largely nominal. Liquid glucose, 52s.

COFFEE.—Demand from home-trade buyers proved rather more active, but export trade is still difficult to manage. Fair quantities offered in auction, and all the finer home grades met a steady inquiry at a full range of prices. Some fine bold Blue-Mountain Jamaica sold up to 118s 6d, and peas from 180s to 200s. Terminal market, after being steadier, assumed a quieter tone.

COCOA in poor request, and market rather depressed. Some Trinidad sold, 89s to 91s; West Coast African, 56s to 57s. No public sales were held this week.

TEA.—In auction, some 35,500 packages Indian and 37,300 packages Ceylon were brought forward, and all the finer descriptions met a good demand at full recent rates; but common Indian were again easy, though lower descriptions of Ceylon sold with more freedom, and realised firm values.

RICE in steady support, and Rangoon, two stars, spot, sold, 44s; arrived, steamer, 40s; and September-October, 37s 6d. Rangoon bran steady, quiet.

SPICE.—Pepper market ruled quieter. Fair black Singapore, spot, sold, 7d; October-December, 7⅛d; Lampong, spot, sellers, 7½d; Aleppy, 7¼d; Tellicherry, 8d; white Singapore, 1s 2½d; Muntok

NATIONAL BANK OF COMMERCE 1839 IN NEW YORK

ditto, 1s 3½d; ditto, October-December, 1s 2d to 1s 1⅝d. Zanzibar cloves, spot, sold, 1s 7½d. Pimento, sellers, 4d. Fair flake tapioca, spot, sold, 2¼d per lb; ditto, fair Penang seed, spot, done 25s; sago flour, September-November, sold, 22s 6d; farina, ditto, 30s 6d; desiccated coconut, fine cut, spot, sold, 83s to 83s 6d; medium, 92s 6d.

JUTE firm to dearer, with sellers reserved, and a fair trade resulted. Native first marks assortment, old crop, August-September, usual ports, sold, £45 for actuals and £41 10s subs; new actuals, August-September, £52 to £53; subs, £46 10s to £48; actuals, September-October, £50 10s; subs, £45 15s to £48; lightning, actuals, old crop, September-October, £35; subs, £33 10s to £34; ditto, new subs, £35 to £36. Hessians and twills more freely dealt in, and firm.

HEMP.—Manila quiet, but sparingly offered, and market firm. J grade, August-October, sold, £68 10s to £69; K, ditto, £58 10s. New Zealand quiet, and fair quality in dock sold, £51. Italian firm, but trade still slow.

SHELLAC.—Market quiet. Fair T.N., spot, 640s; October, sold, 540s to 525s, and 535s.

COPRA.—Market firmer, but rather irregular at times. F.M.S. Straits. August-October, London, sold, £56 10s to £57 5s; October-December, £56 15s to £57 15s; Ceylon, October-December, London, sold, £57 10s to £58 5s; ditto to Rotterdam, £58 and £58 10s; F.M, Straits, October-December, Marseilles, £55 10s. Palm kernels, afloat, sold, £40 to £40 5s; and October-December, £39 10s to £40, and £39 17s 6d.

MENTHOL.—Kob-Suz, spot, sold, 31s; Japanese peppermint oil, 7s; aniseed, 4s 1d; and slab camphor, 6s 3d per lb.

EGG PRODUCTS in quiet request on former terms. Liquid yolk, September-November, sold, 100s per cwt. Albumen, spot, sellers, 4s 10d per lb.

RUBBER.—Market flat in sympathy with weakness in America. Crepe, spot, sold, 1s 8d to 1s 6½d; October-December, 1s 8¾d to 1s 7d; January-March, 1s 10d to 1s 8d; January-June, 1s 11d to 1s 9d. Sheet, spot, sold, 1s 7d to 1s 5¼d; October-December, 1s 7¼d to 1s 5½d; January-March, 1s 8d to 1s 7d. Fine hard Para, spot, 1s 7½d, sellers.

OILS.—Linseed quiet, but firmer. Spot, net, naked, 82s; September-December, 79s 6d. Rape firm. Crude, spot, 75s; refined 90s. Cotton firm. Crude Egyptian, 73s; Bombay, 63s; refined edible, 94s. China wood firm. Hankow, spot (barrels), 109s; August-September, 101s; and Hong Kong, spot, 105s. Palm kernel firm. Crushed, spot, 80s; extracted, 79s. Palm quiet. Softs, July-August, 60s 6d; Lagos, 62s 6d. Coconut dearer. Ceylon, spot, sold, 94s; August-October, 93s; Cochin, ditto, 98s. Soya firm. Oriental, afloat, 72s; October-December, 74s; deodorised, 90s. Japan fish quiet. August-October (cases), 42s. Cod liver dull. English, spot, sold, 48s. Groundnut firm. English crushed, naked, spot, 83s; deodorised (barrels) 105s. Turpentine irregular. American, spot, 145s; September-December, 146s 6d; January-April, 151s. Rosin slow. American, grade B, 47s 6d; F, 56s; G, 56s; K, 57s; M, 57s 6d; WW, 59s; French, F/G, 53s; H, 53s; WW, 54s; extra pale, 55s. Petroleum advanced sharply; American, spot, 2s 4½d; and water white, 2s 5½d per gallon.

OILSEEDS.—Linseed market firmer. Calcutta, afloat, quoted £40 15s; September-October, sold, £40 5s to £40 10s; Bombay, September-October, £42; Plate, afloat, Hull, £36 10s; September-October, sold, £36 10s. Rapeseed dearer. Toria, September-October, Antwerp, sold, £35 10s, £36 10s; real bold Ferozepore, £34 10s to £35 10s; brown Cawnpore, £32 10s, £33. Cottonseed easier. London Egyptian, f.a.q., September-October, sold, £19 10s; Bombay, spot, £14 10s; September-October, at £14 10s. Castor seed firm. Bombay, September-October, Hull, sellers, £29 10s. Gingelly steadier. Chinese, afloat, to Continent, sellers, £48 5s. Groundnuts quiet. Coromandel, August-September, £41.

METALS.—Tin: The market opened firmer last Monday, fair dealings being concluded in cash at £271 10s to £273 10s, three months' £276 to £279, further advancing on Tuesday to £275 to £280, while finally registered at £279 15s. An easier tendency prevailed during the middle of the week on realisations, which were quietly met, cash declining to £274, and three months' to £279 5s. Thursday's market exhibited a higher range, and after fairly active buying values of these dates reached £279 and £279 15s respectively. The demand was well sustained on Friday, cash fluctuating to £277, and three months' to £282. English ingots £276 to £277. Copper: The standard market continued to improve until Tuesday last, and after good supporting orders, October date moved up to £99, three months' to £99 15s. Irregularity prevailed during the middle of the week, cash reaching £100, and three months' declining to £99 10s, while done on Thursday at £100 5s cash, and £99 15s to £99, since at £99 5s, three months. At Friday's session the tendency was rather weaker, a limited business being done chiefly in three months' at £99 10s to £98 15s; electros, £112 to £118; strong sheets, £168; best selected, £107 to £108. Lead steadier at £35 15s. Spelter weak, £39 12s 6d to £40 17s 6d. Antimony: Regulus, English, ordinary to best, £52 to £55. Aluminium: Home trade, £165; export, £185. Wire bars maintained at £117 to £118.

An American Banking Connection

TO those interested in the development of trade with the United States and the establishment of permanent markets there, a banking connection will be valuable to the extent that its American service is efficient and comprehensive.

The Guaranty Trust Company of New York offers its facilities for complete international banking to firms of standing engaged in the American trade. Its financial service is based upon the unusual comprehensiveness of its organization in the United States and the knowledge of the needs of British industry and commerce which it has gained in the twenty-three years it has been established in Great Britain.

The Officers at any of our three English offices will be glad to discuss with the merchant his problems of finance and to describe our facilities in detail.

DIRECTORS.

JOHN LEWIS MAJOR, Sculcoates, Hull (Chairman and Managing Director).
WILLIAM THOMAS COX, Tettenhall Road, Wolverhampton } Managers.
LT. COL. HENRY ERNEST HANSON, D.S.O., Sculcoates, Hull }
LT. COL. WILLIAM HENRY WELLSTED, Tranby Lodge, Hessle, nr. Hull.

Established in 1857, the Company owns and manufactures "*Solignum*," the well-known wood preservative used in most countries of the world as a preventive of decay in timber. The Company's main business is the distilling and refining of coal tar and petroleum products: its steadily expanding activities including the manufacture of tar for roads, Solvent Naphthas, Insulating Materials, Motor Spirit, Naphthalene, Asphatic Varnishes, Carbon for Electrodes, Fuel Oils, Creosote, Carbolic Acid, Refined Petroleum Products, Selected Coal Tar Colours, etc., for all of which there is a constant and increasing demand.

The prospectus shows that after providing for the £50,000 6 per cent. Preference Shares already issued, the assets are sufficient to cover the Preference Shares now offered fully four times as to capital, while the Ordinary Shares offered are covered as to £1 15s. 0d. for every £1 Ordinary Share; while the Auditor's certificate shows that the sum of £8,500 required for the dividend on the Preference Shares now offered has been covered, on an average, 2½ times annually for the last six years on an average issued capital considerably less than half that now issued and offered.

The present issue is rendered necessary by the continuous expansion of the Company's business.

Prospectuses and forms of application can be obtained from the Bankers, Solicitors, or Offices of the Company. (Quantities of 20 or upwards should be applied for by telegram to the Dorland Agency, Ltd., 16, Regent Street, London, S.W.1.) The Subscription List will close on or before MONDAY, 20th day of September, 1920.

SECRETARY AND REGISTERED OFFICES:—
THOMAS WHITEHEAD, Sculcoates, Hull.

The List of Applications for Purchase will CLOSE on or before the 22nd September, 1920.

Application will be made to the Committees of the London, Calcutta and Bombay Stock Exchanges for permission to deal in the Stock.

BURMA CORPORATION, LIMITED.

(Incorporated under the Indian Companies Act, 1913.)

CAPITAL.

Authorised.	In Ordinary Shares of Rs. 10 each.	Issued or Agreed to be Issued.
Rs. 20,00,00,000 (£20,000,000).		Rs. 13,54,16,890 (£13,541,689).

Offer for Sale of

Rs.1,00,00,000 (£1,000,000) 8 per Cent. Convertible First Mortgage Debenture Stock 1925-1930 at par.

REPAYABLE AT 110.

Each Stockholder will have the right on the 30th June or 31st December in any year up to and including the 31st December, 1925 (on giving one calendar month's prior notice in writing to the Company in London or Rangoon) to exchange his Stock at par into fully-paid Shares of the Company at the rate of Rs.11 of Stock for one Share of Rs.10 up to the 31st December, 1923, or at the rate of Rs.14 of Stock for one Share thereafter up to the 31st December, 1925, fractions of Stock being paid off at par in cash.

A London Register of the Stock will be established, and all payments of principal and interest to Stockholders on such Register for three calendar months prior to any payment will be made in Sterling at the fixed rate of exchange of Rs.10 to the £.

Preferential consideration in allotment will be given to Shareholders of the Company.

Interest on the Stock is payable half-yearly on the 1st January and 1st July in each year, and the Stock is repayable after the 31st December, 1925, and on or before the 31st December, 1930, at 110.

A redemption fund will be established at the end of 1925 into which will thereafter be paid yearly sums equal to 20 per cent. of the Stock then outstanding which will be applied in redemption of the Stock by drawings at 110 or by purchase in the open market at not more than 110. The Company has the option of paying off at 110 the whole of the Stock outstanding at any time after 1925 on six months' notice.

The Stock will be secured under a Trust Deed in favour of Trustees by means of a specific mortgage on the mining properties, railway and fixed plant, and a floating charge on the remaining assets and undertaking of the Company.

Additional Debenture Stock to the extent of Rs.1,00,00,000 (£1,000,000) ranking pari passu with that now offered may be issued for the purpose of further expenditure on the undertaking, including advances to or the acquisition of Shares in subsidiary Companies, provided the redemption fund is increased proportionately and the net annual earnings are certified by the Company's Auditors at the date of the issue to be at least twice the annual charge at such date for interest and redemption fund on the total Stock to be issued.

Applications for the Stock must be for not less than Rs.100 (£10) or multiples thereof, and the Stock will be transferable only in such amounts.

Subscriptions (for the United Kingdom) will be in Sterling at the fixed rate of 2s. per Rupee.

[*Continued on Page 463.*

BURMA CORPORATION, LIMITED—(*Continued*).

PARTICULARS.

The following information as to the position of the Company has been supplied by the Chairman.

To THE NATIONAL MINING CORPORATION, LIMITED:—

Gentlemen,—Burma Corporation, Limited, was incorporated at Rangoon on the 17th December, 1919, and took over as from the 1st January, 1920, the undertaking, assets, and liabilities of Burma Mines, Limited (incorporated in England), in consideration of the issue to the Vendor Company of Rs.13,54,16,820 (£13,541,682) of its share capital fully paid.

ASSETS.—The undertaking thus acquired includes.—

1. The Bawdwin Base Metal (zinc, lead, silver, and copper) Mines, in the Upper Shan States of Burma, held under Lease from the Indian Government at a royalty of Three-quarters of One per cent. of value, of the Metal contents.
2. Various other leasehold mining and other properties.
3. The Railway, 46 miles in length, connecting the Mines with the Burma Railway System.
4. The Hydro-Electric Power Installation at Mansam
5. The Collieries at Nam Ma.
6. The Iron Ore Mines at Thondaung, Man-Mak-Lang, and Kungka.
7. Extensive plant, including Crushing Mills, Concentrating and Sintering Plant, Smelters, Lead and Silver Refineries, Power Plant, Locomotives, Rolling Stock, &c.

ORE RESERVES.—Development in the Mines which have over 20 miles of workings has been in progress since 1913. The Ore Reserves now amount to over 7½ million tons, proved and probable, and, with their metal contents and gross values, may be summarised as under:—

		ASSAY.					VALUES.
		Lead.	Zinc.	Copper.	Silver.	ozs per ton.	
HIGH GRADE ORE.	Tons.	%	%	%	%		£
Lead Zinc	4,157,462	26.7	18.8	0.4	23.9		68,104,780
Copper	335,681	12.8	7.7	11.0	23.1		6,044,597
Total proved and probable	4,493,143	25.7	18.0	1.2	23.9		74,149,377
200 ft probable Extension	974,000	28.0	14.0	1.0	24.0		15,174,920
LOW GRADE ORE.							
Chinaman Ore-body	1,600,000	7.5	4.8	0.2	5.1		6,790,400
Gossan	1,600,000	5.0	—	—	5.0		3,093,333
						Total	99,208,030

These values are arrived at on certain assumed prices far below those at present ruling being taken as a basis. These assumed prices, namely, Lead £22 per ton; Zinc £33 per ton; Copper £80 per ton; Silver 40d. per oz. are above the pre-war average, but it is considered that the average prices likely to be current in the future cannot well fall below these figures.

The known ore bodies do not in any way indicate even an approximate limit to the Mine as a great producer, the prospects of developing further ore bodies being considered excellent.

OBJECT OF PRESENT ISSUE.—Supplementing the large capital outlay already incurred, recent construction and development expenditure has been made out of profits. The Ore Reserves now, however, justify extension of the plant up to a capacity of 1,500 tons of Lead-Zinc Silver Ore, and 150 tons of Copper Ore per day, and the present issue of Debenture Stock is made in order to provide further working capital required and thus release future profits for payment of dividends.

METALLURGY.—High recoveries by known metallurgical methods are obtainable, and still higher and more economical recoveries are anticipated from new processes now being developed.

POWER FLUXES AND TRANSPORT.—The Hydro-Electric Power Plant at Mansam is nearing completion, and the development of the Collieries at Nam Ma is being pushed forward rapidly, the coal from which will probably not cost more than Rs.3 per ton at the Mine. This will largely reduce the cost of power.

Limestone flux and barytes for the Refinery are available close to the smelter in quantities far exceeding requirements. Ironstone deposits for fluxing the Zincy Ore are also being worked and supplies are ample for many years to come.

The Company's present Railway to Namyao Junction will be replaced by a new line from Namtu of 1 metre gauge to correspond with the gauge of the Burma Railways system, and the section between Namtu and the Mine will be electrified.

COMPLETION OF NEW PLANT.—The completion of the new plant may be looked for in about three years time, but during that period various portions will be brought into operation and an increasing improvement shown in the output as well as in efficiency and economy.

The remaining expenditure on the plant is estimated at Rs.1,60,00,000 (£1,600,000), including about Rs.30,00,000 (£300,000) for the Railway to and Power Plant at the Nam Ma Coal property and for a Distillation Plant in connection therewith.

TONNAGE PROFIT.—Profits depend upon the prices received for the metals, and in the following estimates the metal prices assumed as above for ore reserve values are again taken as a basis.

On the daily treatment of 1,650 tons of Ore as stated with overall recoveries of—Lead, 90 per cent.; Silver, 88 per cent.; Copper, 93 per cent. (in Copper Ore only); and Zinc, 83 per cent. (in form of concentrate), the daily production should be as follows:—

Lead	358 tons
Zinc concentrates	427 tons
Silver	32,576 ozs.
Copper (containing 2,700 ozs. Silver)	14 tons

and the profit per ton on the metal price basis above assumed, i.e., Lead £22 per ton, Zinc £33 per ton, &c., would be £4 13s. 0d. per ton treated.

This profit of £4 13s. 0d. per ton should rise with the quotations of Lead and Zinc over the prices assumed above and as shown in the following Table—in which Silver and Copper are taken to be constant at 40d. per oz. and £80 per ton respectively:—

ZINC PRICES.

Lead Prices. £	£33.	£37.	£41.	£45.	£49.	£53.	£57.	£61.
	£	£	£	£	£	£	£	£
22	4.65	5.12	5.60	6.08	6.55	7.03	7.51	7.98
26	5.53	6.00	6.48	6.96	7.43	7.91	8.39	8.86
30	6 42	6.89	7.37	7.85	8.32	8.80	9.28	9.75
34	7.30	7.77	8.25	8.73	9.20	9.68	10.16	10 63
38	8.19	8.66	9.14	9 62	10.09	10.57	11.05	11.52
42	9.07	9.54	10.02	10 50	10.97	11.45	11.93	12.40
46	9.96	10.43	10.91	11.39	11.86	12.34	12.82	13.29
50	10.84	11.31	11.79	12.27	12.74	13.22	13.70	14.17

A reference to this Table will show that on the metal prices ruling at the present time, the profit would be £8 12s. 0d. per ton treated, without allowing for extra Silver or Copper profit, equal at to-day's ruling prices for these latter metals to a further profit of £1 18s. 0d. per ton.

ANNUAL PROFIT.—The property is earning at present date at the rate of Rs.60,00,000 (£600,000) per annum and may reasonably be expected on completion of the plant to work up to a profit based on the indicated treatment capacity of 500,000 tons annually, and on the profit figure of £4 13s. 0d. per ton of not less than Rs.2,50,00,000 (£2,500,000) per annum, without considering other profit sources referred to later and excluded from these estimates.

If, however, present Metal prices are taken as the average of those to be maintained in the future the profit should be over Rs.5,00,00,000 (£5,000,000) per annum, plus such addition.

The above estimates are also based on exchange being Rs.10 to the £1, ocean freight, Rangoon to England, £2 per ton (pre-war freight was under 20s. per ton), on mining, milling and smelting costs as supplied by Mr. R. G. Hall, the Company's Resident Manager, on treatment of middlings by the Elmore process, and on the mining and treatment of 1,500 tons of average lead-zinc ore and 150 tons of copper ore per day.

No account is taken in these estimates of:—

(1) The saving by the future use of the Coal from the Company's Collieries in place of imported fuel.
(2) The saving in freight on Lead and Copper marketed in the East.
(3) Profits from low-grade ore, the bulk of which can undoubtedly be treated at a substantial profit, though probably at a distant date.

The statements and figures contained under the above heading from "Ore Reserves" to "Annual Profit" inclusive, are taken from or based upon a written report of Mr. John A. Agnew, M.I.M.M., a Director of Burmah Mines, Limited, to your Corporation, dated 30th April, 1920, such report being a summary and interpretation of the reports made from time to time by the Technical Advisers of Burma Mines, Limited, and of the development, exploration and testing work carried out by its staff.

For the purposes of this letter the Rupee is taken at the fixed rate of 2s.

Yours faithfully,
T. R. WYNNE,
Chairman.

Dated 31st August, 1920.

Applications for purchase must be lodged with the Head Office or a Branch of Lloyds Bank, Limited, or with Tata Industrial Bank, Limited, together with the amount payable on application.

If any application be not accepted in respect of the full amount of the stock comprised in the application, the surplus amount paid on application will be appropriated towards the amount payable on acceptance, and any balance will be returned to the Applicant, and where any application is not accepted, the amount paid will be returned in full. Interest at the rate of 10 per cent. per annum will be charged on any amount overdue.

Failure to pay the balance of the purchase money payable on acceptance will render the amount paid on application liable to forfeiture, and will also give to The National Mining Corporation, Limited (hereinafter called "the Corporation"), the right to resell the Stock in respect of which the default shall have been made.

A brokerage of ½ per cent. will be paid by the Company in respect of all accepted applications by the public (other than Underwriters' applications) bearing the stamp of a Broker or Bankers.

Stock Certificates will be delivered in due course in exchange for Letters of Acceptance duly receipted for the final or full amount payable on the Stock.

The Corporation will procure the direct allotment to Applicants of all Stock applied for and accepted hereunder.

The originals of the above Letter and of Mr. Agnew's Report, the Agreement between the Company and the Corporation (under which the Corporation agrees to subscribe at par for the Stock now offered for sale for a commission of 5 per cent., the Corporation paying the Underwriting Commissions, and the Company paying all other charges and expenses, including brokerage, attendant upon this offer) and copies of the Memorandum and Articles of Association and draft Trust Deed of the Company can be seen at the Offices of Messrs. Guedalla, Jacobson and Spyer between 11 a.m. and 4 p.m. on any day while the List remains open. The Corporation is paying to Underwriters an over-riding commission of ½ per cent. and an underwriting commission of 2½ per cent.

Application for an official quotation for the Stock now offered for sale will be made in due course to the Committees of the London, Calcutta, and Bombay Stock Exchanges.

Particulars of this Offer for Sale, and Application Forms, may be obtained from The National Mining Corporation, Limited, from the Bankers, or from the Offices of the Company.

Dated 16th September, 1920.

THE MONEY MARKET.

THERE have been considerable transfers of credit this week, including a large payment to the Australian banks by the Commonwealth Bank of sums due for sales of wool. Tax payments are also said to have been on a large scale, and the big decreases in Government securities and Other deposits shown in the Bank return was another cause of stringency. In addition to further discounts of October bills to be exchanged into Treasuries, the Bank of England made loans to the market on Thursday and yesterday at 7½ per cent. over the turn of the month. Bankers report rather less pressure for advances in the country, chiefly because the uncertain industrial outlook and the sluggish demand for goods at present prices is causing a drawing in of enterprise. A check to inflation produced by a sulking public, diminished industry, and un-

employment is not a pleasing remedy if a better can be found. And a better is surely available if the necessary cut in prices enables the public at home and abroad to buy, and industry to be resumed and carried on with the same or a smaller volume of credit. At present there is a deadlock and an uncomfortable tying up of credit because certain articles are alleged to be unsaleable, because holders will not face the necessary cut. By postponing it, they run a serious risk of making the position ultimately worse. In America the situation has been faced more boldly, and an easing in the rate for time loans is, perhaps consequently, reported by our New York correspondent's letter on a later page. Opponents of the dear-money policy have to note that the lowering of the price level in America is attributed by well-informed observers there to the high rates imposed by the Federal Reserve board; though it is possible to contend that credit restrictions can be brought about by other means. Bankers have a difficult problem to solve, because they know that too fast a fall in prices might cause trouble. But the present deadlock is thoroughly unwholesome, and attempts to evade its consequences by holding up prices and financing those who are sitting on stocks of goods that are too dear seem likely to make worse trouble in the end. But it is, of course, impossible for industry to resume activity if labour troubles are constantly threatened. Discount rates have been easier, but hardened yesterday, owing to the growing scarcity of money.

* * * *

The Bank return was favourable. A decrease of £29,000 in the stock of gold and an increase of £321,000 in the note circulation left the Reserve £350,000 lower; but there was a net decrease of 15¼ millions in the securities held, and of 15½ millions in the total deposits. Government securities declined by 20½ millions, while Other were 5¼ millions higher. An addition of 1½ million was shown by Public deposits, while Other declined by 17 millions. The Currency Notes Circulation was reduced by £1,378,000 to £353,038,000, which includes £3,370,700 for notes called in but not yet cancelled. This makes the fiduciary issue £306,888,000, or £13,712,000 below the maximum.

* * * *

The following table shows Public Income and Expenditure for the week ended September 18, 1920:—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	30·136	Supply Services	17·710
	Mln. £	Interest on Debt.....	1·261
Less Debt reduction	9·599	Sundries	·795
Added to Exchequer balances.....	·771		
	10·370		
	19·766		19·766

These operations decreased the debt by a sum of £9,599,041, and caused the following changes, which are reflected in our table of National Debt given in another column:—

	Mln. £		Mln. £
Treasury Bills	+ 17·164	Bank of England Advances repaid	— 12·250
Treasury Bonds..	+ ·190	Public Departs. Advances repaid	— 9·250
National Savings Certificates	+ ·300	Surrenders of Bonds, &c.....	— 1·385
		Depreciation Fund.....	— ·500
		Other Debt reduction	— 3·069
		Sundries	— ·800
	+ 17·654		— 27·254

Customs and Excise brought in £14,070,000, as compared with £9,556,000 for the corresponding period last year. Under special receipts £6,681,053 came into the accounts. The floating debt was reduced by just over £4¼ millions

* * * *

The exchange market has displayed features of considerable interest. The strong upward movement witnessed in the New York rate last Saturday was continued on Monday, when the quotation reached 3.55, presenting a rise of over 5 points on the previous Friday's figure. No satisfactory explanation of this movement was evident, and as no factors which would justify it have since been revealed, it is evident that the market was receiving support from some unknown quarter, possibly from American coverings. The possibility of a prolonged coal strike lifting from this market the weight of impending cotton purchases is more than counterbalanced by the general demoralisation of all the exchanges which would necessarily follow such an event. A sharp break occurred on Wednesday, when the rate fell back to about 3.48½, from which it has recovered at the time of writing to round 3.49. Future quotations, which showed a slightly easier tendency at the beginning of the week, are again round 1½ points per month above spot rate. The Paris rate fell rapidly early in the week from round 52.85 to 51. The rumours of French borrowings in this market may have had some influence, but the relief to be looked for from this direction could only be of slight extent. On Tuesday an upward tendency was evident, the rate reacting to 51.60, at about which level it has remained, Friday's early quotations being 51.70 to 51.80. Futures remain at about 17 to 22 points per month under spot. The Brussels rate continued to move in sympathy with Paris, being quoted 49.25 yesterday as compared with 49.17 last Saturday. The spread between the Belgian and French quotation decreased during the week to about 2.40 to 2.50, but this figure tends to increase with any rise of the Paris rate. The sharp depreciation of German marks on Monday continued on the following day, when the rate touched 260. This was immediately followed by a reaction to about 208 on Wednesday. Somewhat violent movements in this market were not unexpected, since it has been freed of practically all control, and the quotation yesterday, 220, compares with 227 last Friday. The quotation for futures has slightly fallen to about .50 per month. The exchange on Holland shows slightly more activity, and rates have moved against this country, the figure yesterday, 11.25½, comparing with 11.27 a week ago. Forward quotations are now about spot rates. Scandinavian rates have all moved in our favour. This movement is most marked in the case of Norway, which jumped to 26.30 on Wednesday, and after somewhat violent fluctuations on Thursday, when it touched 26.75, was quoted yesterday at 26.25, showing a rise on last week's quotation of almost one kroner. Sweden and Denmark were quoted yesterday 17.45 and 25.55 respectively. The Italian rate continued sensitive to the labour position in that country, and ranged from 80.50 to 83 during the week, the latter figure being quoted yesterday. The Swiss exchange remained fairly steady, and was quoted yesterday about 21.68. Spain moved fractionally against us, finishing round 23.75. The Austrian, Polish, and Finnish rates show little feature of interest, and all moved in our favour. Buenos Ayres moved with the New York rate, and was quoted at 58⅜ yesterday as compared with 56⅞ the previous Friday. Rio quotation came over at 12½d. The price of silver, which fell to 59½d during the week, has again recovered to almost last week's closing price, and in Eastern rates there is little change to record on last week's quotations.

EVENTS OF THE WEEK.

SEPTEMBER 18TH.—Food Controller estimates increase in working man's budget at Christmas as 9s 6d per week as compared with last year.

SEPTEMBER 20TH.—No result from conference between Sir Robert Horne and miners' representatives. League of Nations settles Polish-Lithuanian dispute. Police reprisals at Balbriggan.

SEPTEMBER 21ST.—Delegate conference of miners decides that nothing has occurred to "justify the prevention of a strike." Riga Peace Conference opens.

SEPTEMBER 22ND.—Conference of miners, railwaymen, and transport workers on miners' claims. Meeting at Downing street. Premier suggests a joint inquiry. Five Irish police killed.

SEPTEMBER 23RD.—No decision reached in conferences of "Triple Alliance" and miners' executive. M. Millerand elected to French Presidency.

SEPTEMBER 24TH.—Coal strike postponed for one week.

THE PROBLEM FOR BRUSSELS.

How much will be effected by the conference of highly distinguished gentlemen from all the chief countries of the world now assembled at Brussels to discuss the World's Monetary Problem? We hope and believe that it may produce some very beneficial results, though perhaps rather on the negative side. It will be something achieved if it brings home to the nations that are now suffering from lack of capital and depreciated currencies that a great international loan to be issued by the League of Nations or some other international authority is not a practicable scheme, because no international authority can at present be given power to pledge the revenues of the States that are in a position to lend money; that financial transactions between Governments are, in fact, a thing to be avoided henceforward, because it is necessary in all countries that the expenditure of the State should be curtailed; that schemes for a new international currency are equally impracticable, and would be quite futile as a means of securing stability in rates of exchange, because the impoverished countries would have just the same difficulty in obtaining the new international money as they now experience in buying or borrowing dollars and sterling; and that proposals for "mobilising" the claims of Entente countries on Germany by means of an Entente guarantee are merely suggestions that the wealthier members of the Entente should promise to pay the German indemnity if Germany cannot do so, and so are scarcely a reasonable proposition. Having thus cleared away some of the impracticable aspirations by which the very practical problem of world finance has been obscured, the conference can do something by reasserting the truths already published by the Supreme Council, and mostly ignored by the nations which it represents—namely, that what the world needs is real peace, the withdrawal of restrictions on the exchange of commodities, the cessation of credit and currency expansion, and the limiting of official expenditure to the sum that can be provided out of revenue. But its efforts will be of little use if they are confined to a repetition of those wholesome platitudes to which plenty of lip service has already been done. It can place on record the fact that the fixing of the amount of the indemnity is an urgent need, because the recovery of Central Europe cannot be begun in earnest until this question is settled, and because without that recovery the prosperity of the rest of the world cannot be restored in full measure. It can also bring home to the more prosperous countries a truer conception of the appalling distress that exists in those that have been most seriously impoverished; and can show those who have, or might have, a margin of goods and services to spare, how necessary it is that that margin should be increased, by harder work and less extravagance, and devoted to the ultimately profitable task of setting the economic machine to work again by the provision of real saved capital. The conference, with the weight of international authority behind it, might deliver a message that would open the eyes alike of Governments that waste their people's resources on ill-considered military enterprises, and think more of crushing their late enemies than of restoring the economic life of all countries, of well-to-do people who devote such time as they can spare from extravagant frivolity to endeavours to evade taxation, and of wage-earners who restrict the output that is so sorely needed in this crisis, and so make it impossible to improve the terribly depreciated standard of their fellow-workers in less favoured countries. Further, the conference—though perhaps the number of officials who adorn it will make this difficult—might do something by impressing on the Governments of the world that we are still suffering from too much control, and that we shall not get back to a sound business basis until industry is relieved from restrictions, and complete freedom is granted to production and distribution of goods and their passage from one country to another. Lack of goods and difficulty in the distribution of the goods available are at the bedrock of the world's economic problem. Goods are scarce because labour will not work as hard as it did; because the appliances with which it works have not been properly maintained; because employers and merchants

are holding back goods instead of cutting prices to a level at which consumers can and will buy; and because countries which were once great producers lack machinery and raw material, or, in the case of Russia, are kept in a state of disorganisation by politics, internal and external. Distribution is difficult, partly because transport machinery by land has deteriorated seriously through the war, and above all because those who are most in need of goods cannot afford to buy them at the ruling prices owing to the depreciation of their currencies.

The steadying of these depreciated currencies is thus an all-important step to the necessary increase of production. In the Memorandum which Professor Cassel prepared for the instruction of the conference, he laid stress on this need, and for the adandonment—except, as we understood him, in the case of Great Britain—of the belief that the old parities can ever be re-established. A practical scheme of currency reform for Austria—one of the most difficult cases—has been prepared by Sir Ernest Harvey, as financial adviser to the Austrian section of the Reparation Commission. It suggests the formation of an Austrian Privileged Bank, with a capital of $50,000,000, with a board on which the majority would represent the stockholders. The bank would have the exclusive right of issuing notes that should be legal tender in new Austria; it would take over the existing note circulation of the Austro-Hungarian Bank now in liquidation, and exchange it, krone for krone, into its own notes; it would take over from the Austro-Hungarian Bank a corresponding amount of Austrian Government debt, to be specially and preferentially secured with the consent of the Reparation Commission. By this arrangement the Austrian Government by handing over the sole right of issue to the new bank would be, in effect, obliged to cease living on the printing press, except in so far as the bank was prepared to give it credit. Whether it could carry out this urgently needed reform without precipitating revolution is a question that can only be answered by those acquainted with Austrian conditions. Sir Ernest Harvey evidently thinks that it could, and he is a keen and sensible observer, with exceptional opportunities for judging.

The new bank would redeem its notes by cheque on New York at 200 kr to $1, and would issue notes against deposits of dollars in New York at the same rate. This rate was suggested at the time when the scheme was prepared, but would, of course, be subject to modification in respect of the rate current at the time when the scheme was adopted just as the extent of the capital, and whether it were expressed in dollars or another currency would depend on the requirements and arrangements finally arrived at. The bank would also issue new notes beyond those exchanged for the Austro-Hungarian Bank's issue, by making temporary seasonal advances to the Government, by purchases from approved Austrian banks of approved foreign bills, and against deposits of foreign monies with its agents in important financial centres.

One of the conditions on which the new bank would consent to start would be that the Government should cancel all legislation interfering with trade, and revoke all price regulations. This again seems to be an almost impossible counsel of perfection, but is clearly essential to the success of the scheme. The Government would also be asked to promise monthly payments of interest and amortisation of the securities backing the note issue, and the Reparation Commission would be asked to facilitate arrangements for freeing the Austrian banks from their pre-war indebtedness. By the success of such a scheme sound currency and stable exchange, with the immeasurable benefits that would follow, would be secured for Austria. Sir Ernest, a seasoned expert on exchange questions, believes that there would be no fear that the Bank's cash would be exhausted by the presentation of notes for redemption, because, with prices in Austria uncontrolled, more currency would be needed, and because the opportunities for enterprise in Austria—given good money and steady exchange—would stimulate the demand for notes. If the consent of the Austrian Government and of the Reparation Commission, and the foreign (American or other) capital required, could be secured, there is no question that such a scheme might work wonders in Austria and in other countries which would, if it succeeded, quickly follow its example.

A PREMATURE BALLOT.

In one significant respect the strike which was due to begin on Monday, but is now postponed with a fair prospect of settlement, differs from all others of recent years. The negotiations between the coal miners, the Coal Mines Department, and the Government—both before and since a ballot of the pits was taken—have been conducted with open doors. The three parties to the dispute—the miners upon whom the final decision rests, the Government who are responsible to the public for the mining industry, and the public themselves who are the ultimate sufferers and paymasters—know with precision the opposing points of view, and can weigh their merits. This is no lightning strike suddenly imposed upon a bewildered public. From first to last nothing has been hidden, and there never has been a strike in which full publicity, as a peace factor, has been given a greater opportunity. The miners and the Board of Trade have laid all their cards upon the table, and the Board, with the full consent of the miners, has day by day called in the public to see every card played. This week, during which the railwaymen and transport workers have interposed and the heads of the Cabinet have joined forces with the President of the Board of Trade, the policy of full publicity has been continued. Whatever happens, no one can say that industrial war has been due to official secretiveness.

Few can read the voluminous verbatim reports of the conferences—reports which have been issued with admirable promptness—and fail to see the rock which has blocked the path of the negotiators. The ballot of the pits, a ballot taken upon claims which everyone now sees to have been misjudged, has again and again interposed its lumpish bulk. It was taken in order to strengthen the hands of the miners' leaders; it has ended by weakening them. As free agents one cannot doubt that Mr Smillie, Mr Brace, even Mr Frank Hodges would have settled with Sir Robert Horne. It must be plain to all those who have read the reports of the conferences that the miners' leaders dread a strike, and are eager to settle on the very reasonable basis proposed by the President of the Board of Trade. But that great rock of a ballot lay across their path, and they could not discover a way round it.

Not only was the ballot premature, it was also based upon claims which now in the clear light of the conferences are seen to have been misjudged. The original claims were that the export profits, alleged to be of vast amount, should be cut up between the private consumer and the coal miner. Now, even if there be no strike, it is seen that the export profits are not, and will not in the immediate future be, more than half the number of millions estimated by the Miners' Federation. The demand for a price reduction has been dropped, but with the results of the ballot before them the miners' leaders have felt compelled to insist upon the claim to an immediate increase in wages. It is, however, significant that they did not base this claim now upon the amount of the export profits. They put it forward as due to the miners in compensation for the increase in the cost of living since March last, when the latest advance was granted. It was further contended that the miners were granted the Sankey wage to improve their standard of living, and that the calculation of their increase in pay based upon the cost of living should exclude the Sankey wage from consideration. In other words, the miners claimed the Sankey wage *plus* a percentage increase equal to the percentage increase in cost of living. The Government disagreed with this view, but offeerd to abide by the result of an impartial inquiry. The railway men and the transport workers maintain that the miners' wage claim is just and should be granted, and it is quite likely that an impatrial tribunal would be of the same opinion. The more confidence the miners have in their wage claim the more ready should they be to accept the Government's offer of a tribunal, especially a tribunal which would examine and report quickly. We do not for a moment suppose that their leaders would refuse it, or that the other members of the Triple Alliance would support them in refusing it, were it not for the forbidding and frowning rock of that oppressive ballot.

In one most important, indeed vital, direction the conferences have opened up prospects of great improvement

n the coal industry. The miners' leaders, while quite ustly repudiating the sole responsibility for the disastrous lecline in output, have shown anxiety to face the fact of he decline, and to co-operate in removing its causes. Much of the falling off of one ton per week per man in production of coal—a fall which has taken place since 1917, and has been rapidly progressive—is no doubt due to the condition of the mines, and to the system of guaranteed profits to coal owners, made necessary by Government control. The owners and managers have little interest in working their seams to the utmost capacity; rather does their interest lie the other way. If we divide the responsibility for declining output between the miners and the coal owners, we shall probably not be far wrong. There is all the more reason, therefore, why the miners and the coal owners should come together, and under the stimulus of the Government should seek to improve methods of production. If this be done, and the miners be given, as everyone will agree that they should be given, a direct increase in pay based upon improved output, then out of this long and difficult dispute may come bright hopes for the future. Nothing could be of greater importance to the country. The coal industry, the most important basic industry which we have, is in a state of rapid decay. If the decay be not arrested, and arrested soon, the industrial future of the whole country will be gravely imperilled.

The coal conferences, as revealed day by day to the anxious public, have been of extraordinary interest. One figure stands out, that of a newcomer in political life who has proved himself to be a great public servant. In Sir Robert Horne, President of the Board of Trade, the British public has discovered a man. Day after day, for hour after hour, without rest, Sir Robert Horne has borne the whole burden of the negotiations with the miners' representatives. He has displayed throughout those qualities of tact, reasonableness, clear insight, sympathy, and firmness which compel the respect and admiration of opponents no less than of friends. Although a distinguished lawyer, he has never throughout the negotiations made those cunning lawyers' points which so exasperate those of us who are not lawyers. The reports of these coal conferences are worthy of preservation. In them is revealed the peculiar British way of doing things. On both sides, that of the miners and that of the Government, there were no fine speeches, and no appeals to prejudice. Both sides kept to business, treated one another frankly and firmly, and honestly sought after a happy issue out of their deliberations. So long as Ministers treat working-class representatives as Sir Robert Horne did the miners, and so long as working-class representatives are of the quality of the miners' leaders, we may talk idly of revolution in this country, but we shall not suffer from it.

GRAND TRUNK PACIFIC DEBENTURES.

SURPRISE is being pretty generally expressed in the City at the attitude of the Canadian Government in respect of the Grand Trunk Pacific debenture stock, the interest on which has now gone unpaid for three half-years in succession. The facts of the case are fairly simple. The Grand Trunk Pacific is a separate company, of which the entire share capital is held by the Grank Trunk Company proper. Grand Trunk Pacific bonds are guaranteed, some of them by the Dominion Government, others by the Grand Trunk Company. The Grand Trunk Pacific is at present not even earning its working expenses, and obviously, therefore, has no money with which to pay its own bonds. The Canadian Government during the war paid the whole of the interest on the bonds, by whomever guaranteed; and since March, 1919, when the Canadian Minister of Railways was appointed receiver, and in that capacity took over control of the property, it has continued to pay them.

The position of the Grand Trunk Pacific debenture stock is different from that of the bonds. They have a guarantee from the Grand Trunk Company, but only to the extent of this company's surplus after payment of its own fixed charges; and the guarantee is only in respect of each completed year, and not cumulative. Now, the Grand Trunk for the last year or two has barely covered its own debenture interest, and this guarantee is, therefore, temporarily valueless. Further, while the bondholders can presumably foreclose and sell, the debenture holders' rights cannot go further than putting in a receiver. Clearly the receiver of the Grand Trunk Pacific is stating the facts accurately when he writes in a letter published recently in the *Evening Standard* that *as Receiver* [our italics] he has no funds with which to pay the debenture stock interest. But as Minister of Railways he has other resources at his disposal; and investors who have, after careful investigation of the position, invested in this stock, are wondering why these resources should not be devoted to the purpose. It seems to be high time that the Canadian Government should tell holders of this stock what their position is and will be. In the majority report of the Royal Commission of 1917 it was recommended that the ownership of the Canadian Northern, the Grand Trunk, and the Grand Trunk Pacific should be vested in the Dominion-owned company which is now called the "Canadian National Railways," and that the Government should "assume responsibility to this company for the interest on the existing securities of the transferred companies." And this report was signed by Sir Henry Drayton, now Finance Minister of the Dominion. In the case of the Canadian Northern debentures, the Government is acting on this recommendation. It is true that the Canadian Northern undertaking is already vested in the National Railways, while the Grand Trunk and Grand Trunk Pacific properties do not technically pass till the arbitrators' award is made. But for all practical purposes the Government is already in possession, and while the difference may be serious from a strict legal point of view, investors are inclined to argue that in the forum of business equity it does not carry much weight. But there is more than this. At the Grand Trunk shareholders' meeting on February 19th last, the chairman was questioned as to the position of the Grand Trunk Pacific. He replied by quoting the statement of the Minister of Railways in the Dominon Parliament on October 16, 1919: "The Grand Trunk Pacific is a subsidiary of the Grand Trunk, and when we take over the system we shall assume the liabilities in connection with the Grand Trunk Pacific; when we take over the Grand Trunk Railway, we then assume the interest on all the bonds." Now, bonds and debenture stock, especially one that was a mere "income" security, with its interest contingent on earnings, are not the same thing; but an ordinary investor might not recognise this distinction which the Canadian Government is now making. It may be added that, had the Canadian Railway Commission, which is, after all, a Government organ, consented at an earlier date to the adequate increase in railway rates which was long overdue, the Grand Trunk would have all along been earning a net revenue, and its guarantee would have been effective.

What, then, is the position of the Grand Trunk Pacific debenture holders? We may assume that the new railway rates now at length sanctioned will produce to the Grand Trunk Company a substantial net income beyond that required to meet their own fixed charges; and on this net income the Grand Trunk Pacific debentures have the first claim. It is not clear, however, in what manner, after the Government takes possession, the finances of the Grand Trunk will be kept separate from those of the other undertakings absorbed into the Canadian National Railways. There is, further, an interesting legal question. The Government at present are in possession of the Grand Trunk Pacific Railway as receivers in respect of monies advanced to the company. Apparently as unsecured creditors they rank behind the debenture holders. When they become the shareholders, they can only do so subject to the debenture holders' rights. It apparently might be possible for the debenture holders to put in a receiver in front of the Government receiver, and oust the Government from the management. The case, however, is hardly likely to arise in practice. We cannot doubt that before long the Canadian Government will act in the spirit of the report of their own Finance Minister, to which we have already referred:—"We think this is a case for generosity rather than strict justice. Canada is under obligations to the Grand Trunk shareholders." With regard to the contention of investors that they ought to have

been paid current interest, much may be said on both sides. Even if it be granted that the Government is already, in effect, in possession of the Grand Trunk system, it did not thereby assume a liability greater than that of the company, which was to pay the interest on the Grand Trunk Pacific 4 per cent. debenture stock if and when earned. But since many investors believe that they have a grievance, it seems highly desirable that an explanation of the position should be given.

TEA PLANTATION COMPANIES.

GOVERNMENT control of tea ended on May 31, 1919, and the removal of the prohibition on foreign-grown teas followed. But early in June the tax on British-grown tea was reduced to 10d per lb, while the tax on tea grown outside the British Empire was still retained at 1s. It has been pointed out that one of the results of Government control was to cause planters to pay more attention to quantity than quality production. This is noticeable in the large quantities of tea of the common varieties at present on the market.

In reviewing the position of a representative group of tea companies for 1919 it may perhaps interest readers if they first of all peruse the figures of imports of tea during the past three years, and for this purpose the Board of Trade returns are shown :—

IMPORTS OF TEA.

Ceylon and Deps.	73,410,648	98,105,653	144,706,570	4,496,485	6,062,608	9,556,091
Total from British poss	222,784,322	472.756,342	436,451,902	13,667,532	29,535,950	29,119,783
Java	8,079,482	250	35,732,729	468,094	10	2,373,891
China	8,272,418	1,568,626	26,941,371	444,153	263,699	1,957,796
Total from foreign countries	18,477,982	2,123,198	62,674,100	1,041,350	297,448	4,331,687
Total imports	241,262,304	474,879,540	510,439,600	14,708,882	29,833,398	34,203,110
Entered for home consumption	277,435,595	311,151,407	388,465,533	..	..	..

In 1913 our imports were 366,023,125 lbs, of which 305,530,044 lbs went for home consumption and 57,555,768 lbs were re-exported. For 1918 just over 2 million lbs were re-exported. Last year these figures jumped to 29,693,845 lbs. Partly as a result of preferential duties, and partly as a result of a practice which sprung up during the war, British tea-growing undertakings in Java and elsewhere are sending tea direct to America and the Continent which formerly went *viâ* London, and in consequence these no longer appear as re-exports. Stocks in hand on December 31, 1919, amounted to 226,584,000 lbs, which compares with 135,295,000 lbs at December 31, 1918, and 138,408,000 lbs at the end of 1913. Tea in bond at the end of August, 1920, is stated to be 222,478,000 lbs. The reports of tea companies show that this increased stock is to a great extent carried by the plantation companies, which are waiting favourable opportunities to sell at prices which will show a small margin of profit. At present low grade teas are being sold under cost of production and freight.

In the following group of twelve tea companies net profits and production have been extracted from their balance-sheets and compared with the two previous years. It will be seen that in some cases profits have increased, although production has remained fairly normal. This is a matter for some surprise, as the companies have had to contend with many difficulties as a result of higher working costs and scarcity of materials and freight :—

* Loss.

Consolidated Tea and Lands is to be commended upon a satisfactory performance, but East Indian Tea unfortunately reveals a debit balance on its profit and loss account. Among the smaller concerns Chubwa is worthy of mention. Chargola's decrease in crops and profits is owing to drought and blight, which seriously affected the plantations. Some of the companies deplore the loss of Russian markets, but the principal complaint is over labour difficulties. For instance, the outlay of last year of one company for importing labour amounted to £25,842. The average expenditure of this company for the same purpose during the war averaged £4,293 a year.

An interesting tabular statement appears in the report of the Jhanzie Tea Association, Limited. This shows the average price realised for its tea from 1882 to 1919. This company produces a good quality of Indian tea rather above the average. Beginning in 1882 with an average price per lb of 1s 0.58d, the first noteworthy rise is in 1886, when the price worked out at 1s 7.18d, then a decrease to 11.06d in 1889 is recorded. In 1893 the price is down to 9.77d, and in 1904 a further drop to 7.62d is shown. From this date to 1916 a gradual rise occurs, with occasional set-backs. In 1918 it is 9.85d, and in 1919 1s 5.64d is recorded.

The summary analysis below shows the balance-sheet position of the various companies :—

	Capital, including Debentures.	Reserves and Undivided Profits.	Creditors and Bills Payable.	Estates and Property.	Plant and Stocks.	Debtors and Advances.	Cash and Investments.

Our final table shows pre-war and current share values, together with dividends and yields. Ceylon Tea Plantations increased its ordinary share capital in 1918 from £188,000 to £376,000. Chargola paid 5 per cent. interim dividend, but passed its final dividend. The dividend for Lungla (Sylhet) at 7½ per cent. is equal to 15 per cent. on the old capital :—

It is stated that companies are seriously considering measures for restricting production, in view of big crops on hand and present state of markets. For the current season, with a substantially higher rate of exchange, cost of production will show a further increase. On the other hand, tea drinking in America, France, and Germany is becoming more popular, and Russian markets may once more be open before long. It is probable, however, that the companies have taken these possibilities into consideration.

Business Notes.

Employment in August.—According to the September issue of the *Labour Gazette* employment was good, on the whole, during August, although in many industries it showed a decline from the high level of previous months. The trade union percentage of unemployment was 1.6 at August 31st, as compared with 1.4 per cent. in July and 2.2 per cent. in August, 1919. The monthly figures since 1913 read as follows :—

End of—	1913.	1916.	1917.	1918.	1919.	1920.
	%	%	%	%	%	%
January	2·2	0·6	0·3	1·0	2·4	2·9
February	2·0	0·5	0·3	0·9	2·8	1·6
March	1·9	0·5	0·3	1·2	2·9	1·1
April	1·7	0·5	0·3	0·9	2·8	0·9
May	1·9	0·5	0·4	0·9	2·1	1·1
June	1·9	0·5	0·4	0·7	1·7	1·2
July	1·9	0·4	0·4	0·6	2·0	1·4
August	2·0	0·4	0·5	0·5	2·2	1·6
September	2·3	0.4	1·3	0·5	1·6	..
October	2·2	0·3	1·1	0·4	2·6	..
November	2·0	0·3	1·1	0·5	2·9	..
December	2·6	0·3	1·4	1·2	3·2	..

In cotton weaving and wool sorting and in the linen, lace, leather, and boot and shoe industries employment continued depressed. The percentage of unemployment among workpeople (skilled and unskilled) covered by the Unemployment Insurance Acts was 2.88 on August 27th, as compared with 2.73 on July 30th. The number of trade disputes involving stoppages of work, reported to the Department as beginning in August, was 139. In addition, 123 disputes which began before August were still in progress at the beginning of the month. The total number of workpeople involved in these disputes was about 86,000, as compared with over 90,000 in the previous month, and about 272,000 in August, 1919.

Retail Prices.—The monthly figures published by the *Labour Gazette* relating to retail prices and the cost of living generally show a further rise in August. At the end of last month the general cost of living figure shows an increase of 161 per cent. since July, 1914, as compared with 155 per cent. at the end of July last and 115 per cent. a year ago. Retail food prices were 167 per cent. above pre-war level at September 1st, as compared with 162 per cent. at July 31st and 133 per cent. on November 1, 1918. There was a rise of 4d per lb in the maximum price of Government butter, and a seasonal increase in the price of eggs. These and advances in British meat, bacon, and milk were partly counterbalanced by a seasonal decline in potatoes.

Housing Position.—The first annual report (Cmd. 917) of the Ministry of Health on Housing and Town Planning has just been issued. In describing the work of the department, it admits that "progress during the year in the actual production of houses was by no means as rapid as had been hoped." Up to the end of March, 1920, 9,097 schemes had been submitted by 1,553 local authorities, and the number of houses in schemes which had been started was 52,031. Plans providing for 161,837 houses had been approved. With reference to land acquisition, negotiations for the purchase of 2,986 approved sites were conducted by the Inland Revenue Valuation Office. The price asked, £3,904,946, and the price agreed, £2,809,112, showed a difference of £1,095,834. The cost of land in housing schemes of all local authorities where site and price had been approved was £5,094,428 for 27,782 acres, an average cost of £183 per acre. The Ministry confirmed 204 orders for compulsory acquisition of approximately 7,226 acres of land. During the year under review loans sanctioned for housing schemes amounted to £41,684,843.

Railway Statistics.—The railway statistics, issued by the Ministry of Transport, for the four weeks ended July 18th show that the total freight traffic conveyed was 1,340,859 tons, or 5.2 per cent. in excess of the preceding four weeks (which included Whitsuntide); compared with the four weeks ended May 23rd, which were not affected by holidays, the tonnage conveyed shows a decrease of 584,692 tons, or 2.1 per cent., but owing to an increase in the average length of haul the ton miles worked were only 1.2 per cent. less. The estimated receipts per ton mile, excluding cost of collection and delivery, compare as follows :—

	Four Weeks Ended July 18.	June 20.
	d	d
General merchandise	2·486	2·561
Coal, coke, and patent fuel	·870	·925
Other minerals	1·078	1·122
Total freight	1·444	1·517

HARRISONS & CROSFIELD, LIMITED.

ISSUED CAPITAL ... £1,837,966.

Agents and Secretaries for Tea and Rubber Estates.
General Exporters and Importers.
Shipping, Banking and Insurance Agents.

1-4, Great Tower Street, London, E.C.3.
With BRANCHES and affiliated Companies throughout the East and elsewhere.

The main fluctuations in the tonnages of the principal commodities conveyed, compared with the two previous periods, were as follows :—

	Four Weeks Ended June 20.	May 23.
	Tons.	Tons.
Coal, coke, and patent fuel	+1,095,000	— 8,000
Ironstone and iron-ore	— 86,000	—208,000
Iron and steel	+ 70,000	— 38,000
Pig-iron	+ 28,000	+ 51,000
Roadstone	+ 28,000	+ 55,000
Bricks	+ 20,000	+ 6,700
Timber	+ 19,000	— 21,000

The passenger train mileage run during the four weeks ended July 18th was 609,968 miles in excess of the previous four weeks. With regard to freight working, the average wagon load has increased from 5.40 tons to 5.47 tons, the train load from 132.84 to 134.33 tons, and the train miles per engine hour from 3.30 to 3.31. The net ton miles worked per engine hour, viz., 444.70, are in excess of those of any previous period in the current year.

Commodity Prices in America.—Another very heavy decline is recorded in Bradstreet's Index Number of commodity prices for August. The figure for September 1st—$17.9746—shows a decline of 4.5 per cent. from that of August 1st; the decline from the peak point of February 1, 1920, was 13.9 per cent., and the September 1st number was, in fact, the lowest recorded on the first of any month since May, 1919. It is still, however, 106 per cent. above August 1, 1914. Weakness in textiles, especially in cotton and cotton goods, and in the provisions group, with smaller declines in hides and leather, metals, vegetable oils and naval stores, offset some strength in dried fruits, miscellaneous products, and coal and coke. The month saw a heavy break (10 cents) in cotton, resulting in lower prices for cotton manufactures, and also saw weakness in groceries, prominent among the latter being sugar, with a drop of 6½ cents, tea 5 cents, coffee 2¼ cents, and rice 2 cents. A slight downward turn in building materials, due probably to the check to construction, was an event of the month. Coal and coke were stronger, reaching, in fact, new high record levels, and a number of foods, notably dairy products, advanced, as did meats. No less than 10 out of 13 groups declined in August, and 40 individual commodities moved lower, while 26 advanced and 40 remained unchanged. A Reuter telegram from Manchester (New Hampshire), dated September 22nd, states that the Amoskeag Manufacturing Company announces a reduction of 33⅓ per cent. in the price of manufactured cotton goods. The present weekly production of the company, which employs 10,000 operatives, amounts to 4,000,000 yards. Explaining the reduction, the company states that it fears that the cotton market, which is already unsettled owing to a heavy cancellation of orders, might reach a condition similar to that which compelled companies in the woollen line to close down.

International Cotton Statistics. — The International Federation of Master Cotton Spinners' and Manufacturers' Associations has published statistics relating to the consumption of raw cotton during last season, and stocks of raw cotton in the hands of spinners on July 31, 1920, together with particulars relating to the number of spindles throughout the world. The figures with regard to raw cotton consumption are the first issued since the

end of the war, writes our Manchester correspondent. Returns have been received from all countries, with the exception of Austria and Russia. On the basis of the statistics the consumption of American cotton during the twelve months ending July 31st last is given as 12,430,000 bales, plus 70,000 bales for Austria, or a total consumption of 12,500,000 bales. The amount of Egyptian cotton used during the twelve months is 860,000 bales, and of Indian cotton 3,680,000 bales. The total world consumption of all kinds of cotton for last year, except what was used in Russia, may be put down as 19,100,000 bales. Stocks of raw cotton at the mills throughout the world on July 31st last were: American 2,275,000 bales, Egyptian 273,000, Indian 1,925,000, and sundries 502,000 bales, making a total of 4,975,000 bales, in addition to cotton held by Russian mills. According to the returns received 10,327,930 spindles were idle on July 31st, and to this number must be added the idle spindles of Russia and Austria, and a certain percentage for those mills which have not made returns, so that throughout the world there are at least 16,000,000 idle spindles out of a total spindleage of 154,200,000. With regard to Great Britain returns have been received from the owners of 51,645,401 spindles, and of these 50,045,902 spindles were active out of a total estimated number of spinning spindles in the country of 58,692,410. The consumption of cotton in Great Britain is given as 2,620,785 bales American, 389,062 bales Egyptian, 51,129 bales East Indian, and 124,338 bales of sundry cottons, making a total of 3,185,314 bales. On July 31st English spinners held stocks of 250,263 bales American, 94,765 bales Egyptian, 10,262 bales East Indian, and 29,334 bales of sundries, making a total of 384,624 bales. It is of interest to mention that out of the 50,045,902 active spindles in Great Britain making returns there are 39,391,318 mule spindles and 10,654,584 ring spindles. Of the same total 34,648,871 spindles are using American, East Indian, and sundry cottons, while 15,397,031 spindles are consuming Egyptian cotton. There were on July 31st 609,994 spindles in course of construction, and 1,599,499 spindles standing idle.

Cotton Mills Strikes at Oldham.—An irregular dispute has arisen in the cotton spinning industry at Oldham, writes our Manchester correspondent, and out of the 230 mills in that town about 180 are on strike. The position is rather complicated, but it may be said that, owing to the shortage of operatives during the war, the Masters' Association and the trade union came to an arrangement whereby female creelers were admitted into the factories, and in most cases the employers consented to pay the full wages of these operatives, although they did the work of little piecers, who are usually paid by the minder of the mules. Recently negotiations have taken place between the Employers' Association and the executive committee of the trade union for a variation of the terms of employment, and a week or two ago it was agreed that in future the minder and the big piecer should pay three-quarters of the wages earned by the creeler, and the remaining quarter be paid by the employer. The workpeople in the mills not only object to the agreement, but protest against an arrangement of this kind being made by the trade union without taking a ballot of the members. The strikes, of course, are unauthorised, and the operatives are not receiving any benefit from the trade union. Last Tuesday a special meeting of the emergency committee of the Federation of Master Cotton Spinners' Associations was held in Manchester, when it was decided to support the action of the Oldham Employers' Association. It was also resolved that a special meeting of the Federation General Committee should be held on Tuesday next for the purpose of considering the taking of united action in the event of the Oldham dispute not being terminated. It may be said that owing to the trade depression the Oldham employers have not so far been concerned by the stoppage of yarn production, and it is anticipated that the dispute will make it unnecessary to inaugurate a scheme of short-time working in the mills. It is understood, however, that the Federated employers are contemplating locking-out the whole of the operatives in the mills under their control unless the workpeople at Oldham return to the factories at once. If action of this kind is taken it will mean throwing out of employment 200,000 operatives and bringing to a standstill nearly 50,000,000 spindles in Lancashire.

Dyers' Claim for Higher Wages. — Our Manchester correspondent writes:—The operatives engaged in the dyeing and finishing industries, which are chiefly carried on in Lancashire and Yorkshire, have made an application for an increase of wages of 40 per cent. on current rates, a minimum of £5 per week for adult males and £3 for females, and a guarantee of 25 per cent. over day rates for piece workers, together with payment for all statutory holidays, a week's holiday with pay, and a strict limitation of working hours to 48 per week. It is understood that about 80,000 workpeople are interested in this claim for higher wages. A joint conference between the employers and the trade union officials was held in Manchester at the beginning of this week, and after some discussion it was stated on behalf of the employers that they would give immediate consideration to the application, and arrange for a further joint conference at an early date, at which their decision would be given.

Egyptian Cotton Crop.—Our Manchester correspondent writes:—Cables have been received in Manchester during the last few days to the effect that the outlook for the Egyptian cotton crop for this season is less favourable than a month ago. It is reported that the plants have been injured by hot winds, the pink boll worm, and slight fogs. At one time it was expected that the production for the twelve months ending July 31st next would be quite 7,500,000 cantars as compared with 5,660,000 cantars last year. According to recent advices it is feared that the growth for the current year will not be more than 6,500,000 cantars.

A New Polish Loan.—The British Overseas Bank announces that the Polish Treasury is issuing on October 1st next a Four per Cent. State Premium Loan, 1920, up to 5,000 million Polish marks, in bonds of 1,000 marks each. It is a 40-year loan, with yearly coupons (free of tax), and during the first 20 years there will be a weekly drawing of one prize of one million marks, the first drawing to take place on November 6th next.

The London School of Economics.—The following lectures are open to the public without fee:—"Economics as a Liberal Education," by Sir William Beveridge, director of the school, on October 4th, at 5.30 p.m.; "Coal as a Factor in International Trade," by Professor Sargent (Professor of Commerce), on October 5th, at 5 p.m.; "The Origin and Growth of English Commercial Law," by Professor H. C. Gutteridge (Sir Ernest Cassel Professor of Commercial and Industrial Law), on October 6th, at 6 p.m.; "Published Balance-sheets and Accounts," by Professor L. R. Dicksee (Sir Ernest Cassel Professor of Accountancy and Business Method), on October 7th, at 6 p.m.; and "Forms of Industrial Self-Government," by Professor L. T. Hobhouse, on October 14th, 21st, and 28th, at 6 p.m.

UNITED STATES.—THE FRENCH LOAN—DOMESTIC FINANCING — THE MONEY OUTLOOK — CROP REPORTS.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 10.

THE fact that subscription lists of the new $100,000,000 French Government loan, which was offered here this week, were closed one hour after they had been opened on Thursday is conclusive proof that the terms of the issue were very attractive to banking and investment houses throughout the country. It also indicates that the offering was oversubscribed, and seems to foreshadow a prompt disposal of the bonds to final investors. The new

British Bank of Northern Commerce, Ltd. *Barclay's Bank, Ltd.*

securities are already commanding a substantial premium in the outside or kerb market. The terms of the issue are already familiar to your readers.* The underwriting syndicate, headed by Messrs J. P. Morgan and Co., offered the bonds at par and interest, and announced that Anglo-French external loan 5's, due October 15th, with final coupon attached, would be accepted in payment for the new bonds at 102½ per cent. flat, viz., par and accrued interest to maturity. The 8 per cent. interest rate, together with sinking fund redemptions at 10 per cent. premium before maturity, is the stiffest charge ever made for a loan floated in this country by a leading European Government. With the underwriting syndicate's commission added, the total cost to France is probably close to 10 per cent. But this seemingly excessive cost is no reflection on French credit. The fact is, France was a "belated borrower," and, as one commentator remarks, entered our autumn market at a time when credit facilities were already pretty well allotted to other applicants, and when the banks were carrying the heavy burden of crop-moving and other seasonal demands. Furthermore, the price which France is paying cannot be considered exorbitant when time funds here are commanding 8¾ per cent., and are hard to get even at that figure. The $20,000,000 Swiss loan lately placed in this country bears an 8 per cent. interest rate, while the recent $50,000,000 Belgian loan, carrying a coupon rate of 7½ per cent. was offered at 97¼ and interest. The proceeds of the new loan will be used to redeem that much of France's $250,000,000 share of its Anglo-French loan maturing October 15th. It is not yet entirely clear as to how the remainder of this obligation will be met, although it is generally estimated that France has repurchased about $60,000,000 of the Anglo-French 5's, and gold shipments to this side of at least $50,000,000 are expected to be made for French account.

The marked success of the French loan offering has had a stimulating influence upon the bond market, since it is taken as foreshadowing an increased investment demand. A great deal of new domestic financing must be done, especially by railroads; how soon it will be undertaken depends largely upon the development of such a demand. The stock market continues quiet, though displaying a fairly firm undertone; operations for the rise seem still to be held in check by the uncertain outlook with respect to money, trade, and industry. This week time money rates have been a shade easier at 8½ to 8¾ per cent., with somewhat freer offerings, the improvement apparently being based on expectations that gold arrivals, by strengthening the position of banks, will serve to lessen the general money stringency. No permanent relaxation can reasonably be expected until banks build up their reserves. The ratio of cash reserve to deposit and note liabilities at the end of last week stood at 42½ per cent. for the entire Federal reserve system, or only ¼ per cent. above the low point of the year.

The Government crop report this week was rather disappointing in that it showed a further reduction in the total wheat yield, which is now estimated at 770,000,000 bushels, or 171,000,000 bushels below that of 1919; such a harvest, however, would be greater than that of any year before the war. In most other respects the report was favourable; it showed the best September condition for corn in many years, and predicted the largest crop on record, with a promised yield of oats exceeded only three times in previous years.

* See *Economist*, September 11, page 394.

FRANCE.—BRUSSELS CONFERENCE—THE RESTITUTION OF MATERIAL — FOREIGN TRADE — REVENUE—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, September 21.

THE Financial Conference at Brussels has taken precedence this week in the minds of economists over every question, even including that of the Presidential elections. France is admirably represented. M. Celier is too well known to need any introduction, and he is well supported by M. Lefèvre, of the Crédit Lyonnais, and MM. Fleuruau and D'Avenol. The programme for the meeting, which opens this week, is that each country should lay before the Commission a report of its financial and economical situation, as to its budget, its monetary system, and its exchange. It is proposed then that three special Commissions should be appointed, the first to advise as regards the credit of the different States, the second to deal with the balance of trade, and the third to consider how far it is possible to re-establish the credit of each State by means of international credit. After the Commissions have made their report, the Conference will meet and submit its resolutions to the various Governments concerned, and an international statistical office will also be created. Public opinion here is hesitant as to what the Brussels Conference can result in. It is willing to accept any measure that can really contribute to the amelioration of the present unsatisfactory situation, but it remains sceptical as to what success can be looked for from a Conference that recalls, if only vaguely, the vagueness of the League of Nations.

It has now become possible to gather some definite idea of the amount of work that has been done by the French Office for Industrial Reconstitution in connection with the recovery from Germany of the factory, plant, and other industrial material that was carried away from this country during the war. It is officially estimated that during the period of their occupation the Germans carried away from French territory industrial material with a pre-war value of over 1,000,000,000f. The task of tracing and identifying this material, which had been transferred to all parts of Germany, was a colossal undertaking.

During the first 18 months that elapsed after the signature of the armistice the Industrial Reconstitution Office, the headquarters of which was at Wiesbaden, succeeded in recovering nearly 300,000 tons of material, and restoring 228,064 tons to French industry. A large proportion of this total was identified by its French owners, who visited the various parts of Belgium, Germany, Austria, and Alsace-Lorraine whither it had been removed. Of the total amount of material that has been recovered, 137,677 tons was discovered in Germany, 40,603 tons in Belgium, 495 tons in Austria, and 25,386 tons in Alsace-Lorraine. French railway material to the amount of 23,176 tons was found in various parts of Belgium and 786 tons in Germany itself. In addition to these 228,000 tons, a further amount of 218,864 tons has still to be identified. The greater part of this, or 138,463 tons, has already been brought back to this country, and is awaiting identification, while another 21,270 tons is *en route* from Germany.

Among the material found and identified 24,695 tons is awaiting acceptance by its legitimate owners, while 34,436 tons that has been traced and is still in Germany has been found to be in such a condition that its legal owners have refused to accept it in restitution for what they have lost. In such cases the persons whose property has been removed have the right to have their destroyed or irreparably injured material replaced by satisfactory substitutes. In a large number of cases, as may be expected, manufacturing plant has been broken up and distributed piecemeal in such a manner that it can never be recovered.

The French trade returns for the first eight months of the current year, as compared with the corresponding period of 1919, show that this country has in that period reduced the balance against her by the amount of 5,845,071,000f. The total amounts of exports and imports for the first eight months of the two years compare as follows :—

	1919. Francs.		1920. Francs.
Imports	21,743,346,000	....	24,561,195,000
Exports	5,743,218,000	....	14,406,138,000
Deficit	16,000,128,000	....	10,155,057,000

The detailed figures for the two periods, which show a comparative increase of imports amounting to 2,817,849,000f, and of exports to the amount of 8,662,290,000f, are as follows :—

IMPORTS (000's omitted).

	January 1, to August 31, 1919.		Inc. or Dec. 1920.
	Francs.	Francs.	Francs.
Foodstuffs	6,118,929	6,658,159	— 539,230
Raw materials	11,324,485	8,338,750	+ 2,985,735
Manufactured goods	7,117,781	6,746,437	+ 371,344
Totals	24,561,195	21,743,346	+ 2,817,849

EXPORTS.

	Francs.	Francs.	Francs.
Foodstuffs	1,299,609	624,340	+ 675,269
Raw materials	3,215,690	987,755	+ 2,227,935
Manufactured goods	9,226,052	3,582,504	+ 5,643,548

Totals	14,406,138	5,743,218	+ 8,662,920

The national revenue returns for August show total receipts amounting to 882,013,900f, or an increase of 203,076,400f over Budget estimates, and of 215,034,700f, as compared with August, 1919. The revenue from registration duties amounted to no less than 70 per cent., or 62,969,000f, more than the estimate, while indirect taxes produced rather more than 93,000,000f more than had been expected when the Budget was framed. This unexpectedly large increase was derived chiefly from beers, railway tickets, amusements, tobacco, gunpowder, motor spirit, and petroleum. It is to be noted that the taxes on motor spirit and petroleum yielded, during the month, 22,198,000f. Customs yielded 12 per cent. more than the Budget estimate for the month, and 15 per cent. more than during August, 1919. The revenue from posts, telegraph and telephones, however, although some 27,000,000f greater than in August last year, was some 18,500,000f lower than the estimated receipts from this source, owing to the recent important increase in rates. The yield from postages, which have been raised from 15c to 25c for ordinary letters, was 9,643,400f below the estimate for the month, and that from telephones rentals, which have been raised from 450f to 750f a year for private users, was 6,878,100f less than the Budget forecast. The month's increase in revenue brings the total increase for the first eight months of 1920 to 2,468,795,600f over that for the corresponding period of 1919. The revenue from taxation for the first eight months of the current year has been 2,176,574,600f above the Budget estimates for that period.

The general political situation continues to exercise a very marked effect on the Bourse. The rise in the price of foreign money has also had its influence in increasing the value of certain securities. The French 3 per cents are heavy at 53.80 as against 55.60; the 5 per cents have lost 1f 50, falling from 86.90 to 85.40; the 1917 4 per cents have dropped from 69.85 to 68.75; the 1918 4 per cents from 70.55 to 69.40; and the 1920 5 per cents from 101.65 to 100.05. Banks generally have shown depression, Banque de Paris dropping from 1,755 to 1,685 and Union Parisienne from 1,274 to 1,230. Railways and Shipping are both depressed, selling having been effected with a view of investing in the new loan. Thus, Transatlantique has dropped from 425 to 395, Messageries from 425 to 416, and Chargeurs from 1,275 to 1,170. Metallurgical shares have not been in great demand; Aciéries de France are at 930, as against 980, and Chantiers de St Nazaire at 1,585, as against 1,740. Despite the high price of copper, which is at and about £100, Tintos, owing partly to industrial troubles, have fallen from 1,740 to 1,680, and Boleo is back from 970 to 955. Mexican Eagles have shared in the general slump and dropped from 622 to 597, but recovered again to 615. Shell remains strong at 427, while Royal Dutch has actually risen to 40,000.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

GERMANY.—EXCHANGE COLLAPSE—BOURSE—STATE TRADE MEASURES—POTASH SYNDICATE—COMPANY STATISTICS.

(FROM OUR CORRESPONDENT.)

BERLIN, September 16.

JUST a year ago the Federal Government restored freedom of dealing in foreign exchange. The immediate result was a sharp drop in Reichsmark, and the course, with one or two slight recoveries, continued downward until it touched bottom in the late winter. A sudden recovery began in the first half of March. This mark fall movement was accompained by rapidly rising prices, a Bourse boom, abundant export at prices which at first were so low that they caused an international dumping panic, frantic buying by Germans, who saw no end to the decline in their currency's buying power at home and abroad, and, as result, great productive activity. The March-May rise in mark exchange induced in all these respects a contrary movement; Bourse quotations fell, prices fell, but, as the foreign exchanges fell much more rapidly, export became difficult, the public, in the belief that the mark's buying power would continue to increase indefinitely, ceased buying, and industrial production declined. The last week has brought indications that the first of these two movements is about to be repeated. Whether it will continue as it did last winter is not certain. In both cases the exchange levels determined, not reflected, general business conditions; and this exchange movement is not governed by Germany's foreign payment balance, but almost exclusively by buying and selling of marks and mark securities by speculative foreigners, with whom, as a rule, only general political and financial prospects count.

To-day, sterling (selling rate) closed at 218, the dollar at 63.57, the gulden (100) at 1,926.05, and the Swedish crown (100) at 1,258.25. Allowing for the recent decline of European currencies against American, it follows that the mark has lost nearly half its price of last May, when the dollar fetched a little over 34, and sterling a little over 133. A fortnight ago (September 2nd) sterling sold at only 176.70, and the dollar at 49.35, and the mark's loss in these two weeks is almost as much as in the first three months after its rise came to an end. That the mark in May rose rather higher than price level and diminishing export possibilities justified was the opinion of best authorities here, and a reaction was certain. But the present rapid decline is put down to the change in plans as regards the Geneva Conference. As the immediate cause of the recovery in March was the announcement of Entente plans for helping Germany to her legs, this view seems justified. To large classes of Germans whose individual interests conflict with those of the nation as a whole the new movement is welcome. The propertied and commodity-owning classes reaped enormous advantage from the headlong monetary depreciation of last winter, and it might even be argued paradoxically that the nation did not lose, as the incentive to production was undoubted, and the currency recovery of the spring caused an universal fall in production. In fact, each reversal of the exchange's course, by making readjustment necessary, has brought losses and waste; and it is plain that the stabilisation of the mark at any level, however low, would be preferable to the violent oscillations of the past year.

The Bourse bull movement, the most marked of all phenomena of the "catastrophe boom," is well under way. The last report shows the average quotation of 10 leading loans and 25 banking, industrial, and shipping stocks at 13,377m on September 11th, as against 13,018m a week before. Since the 11th, the movement has been steadily upward. In addition to the mark exchange fall were other factors: in the metal industries the renewed French permission to export minette to Germany, and further company fusion reports; in potash stocks, for which there was a great demand on the 13th, the first annual report of the Potash Syndicate; and for shipping, the American agreement with the Norddeutsche Lloyd, though this, being anticipated, had limited effect. The abandonment of a Hamburg strike plan had more effect. To-day were considerable realisations in the favourites of a week ago, particularly German Petroleum and the strongly inflated Bochum Cast Steel; but for electrical and shipping securities there was strong demand. Yesterday reserve was shown on account of a motion submitted to the Hessian Landtag requiring the Federal Government to withdraw the present currency from circulation and issue new notes. The hoarding of notes with aim of escaping payment of the emergency levy, and the increment of income and increment of property taxes, is known to have taken large dimensions. Also, since the mark exchange recession took the appearance of a lasting movement, there has been wholesale hoarding of foreign notes, which has led to a sharp rise in note quotations of several countries as compared with other currency. On September 1st Dutch notes sold at 1,585, and telegraph transfers at 1,590; to-day the first sold at 1,962 and the second at 1,927. From both exchange and taxation standpoints there is a demand for Government restrictive measures against currency hoarding.

The coal situation foreshadows some improvement. The working of extra shifts continues to increase. The average daily production on the Ruhr in August was 287,879 tons, as against 280,154 tons in July. The Government has promised special coal rations to the sugar industry, but has recommended, meantime, resort to brown coal as far as possible, and next year, it is stated, this industry will have to rely entirely upon brown coal. The Coal Commissioner declares that in the textiles branch only mills which are economically working will get any supply at all. At present, in all industries coal is being used by factories which work on much reduced time, and therefore unprofitably, and this increases the shortage of factories which might be run fully and cheaply. The Government has reduced export duties on imported categories of machines. On certain textile machines the duties are entirely suspended; on ten categories they are reduced to 2 per cent. Duties on machines for working stone and wood, hydraulic presses, rivet machines, and mechanical hammers have been reduced to 2 or 1 per cent., and on bakers' and butchers' machines to 3 per cent. The prohibition of coffee import has been removed, but not more than 500 bags a day may be imported. From January 1st will cease the prohibition against import of exposed cinematograph films, but here also imports will be limited—to 15 per cent. of the native production (1,200,000 metres) of 1918. Only negative films will be importable, and these will be rationed among producing and importing firms in existence since January 1, 1919, and January 1, 1917 respectively. The newspaper publishers have started an agitation for abolition of State paper control, at present embodied in the Directing Board for the German Newspaper industry. At present paper is rationed by this body, but shortage no longer exists; high prices have cut down consumption, and papermakers are even getting export licences on the plea that nothing but export can save them from reducing output and discharging workmen. The State control of book and magazine material ceases on October 1st. The plan for an All-German Compulsory Paper Syndicate is said to be fully prepared.

The first report of the Potash Syndicate, for 1919, shows that with exception of America, Germany has not regained her former customers on aything like the old scale. The Potash Syndicate is one of the compulsory fusions which were planned by Wissell and Moellendorff for all industries. It is governed by a body representing producers, traders, and consumers, with equal representation in each class for employers and employees. Germany, in 1919, consumed 6,370,326 double-centners of pure potash. She exported 700,000 d.c. to the United States, and a little over 100,000 d.c. to Great Britain. The three Scandinavian countries together imported 560,000 d.c. The whole home and foreign sale of pure potash was 8,120,024 d.c., as against 10,016,643 d.c. in 1918. The total home and foreign sale of potash salts was 41,599,269 d.c., of which 28,312,124 d.c. consisted of kainite and sylvinite.

A Statistical Bureau report on development of share companies and limited liability companies during the last ten years shows a much greater increase in total capitalisation than in the number of companies. The number of

companies in existence at close of 1919 was 5,715, as compared with 5,222 ten years before, and the total capitalisation was 21,035,811,000 marks, as against 14,897,851,000 marks. The increase of total capitalisation in 1919 was more than twice as great as in the maximum year before the war.

POLAND—INDUSTRY AND THE WAR-MONEY AND CAPITAL—A NEW INCOME AND PROPERTY TAX—A LITHUANIAN CENSUS—DANZIG AND THE HAMBURG-AMERICA LINE.

(FROM OUR CORRESPONDENT.)

WARSAW, September 14.

POLISH industry has not been affected in the same degree as agriculture by the Bolshevik invasion. There have been no requisitions of machines and raw materials similar to those practised by the German occupants. Nevertheless industry is suffering from the strain of the war. The rolling-stock, which has been always insufficient for the commercial needs of the country, has been put actually more or less entirely at the disposal of the military authorities, and the factories have great difficulties in getting the necessary coal and raw materials. Great quantities of coal have been amassed during the Bolshevik invasion in the collieries, but they cannot be brought to the place of destination. Actually, as compared with pre-war conditions, the working capacity of the mills amounts in the textile industry to 27 per cent., in the cement industry to 20 per cent., in the pottery trade to 10 per cent., in the chemical trade to 25 per cent.

Superabundance of money and a capital famine are the result of paper inflation, and of the small economic activity of the country. Though milliards of new monetary signs are put every month into circulation, there is no capital for the extension of industry. This is easily explained by the fact that the inflation is causing a rise of prices, which is completely absorbing the new milliards of paper marks. An undertaking which before the war could be started with 20 millions, would be actually impossible without floating a hundred times greater capital. It has been calculated that for building new locomotive works a capital of two milliards is necessary.

Such amounts cannot be obtained, but even the circulating capital necessitates at present prices so big amounts that industrial undertakings must resort to the help of the Government. The factories working for the army are provided in this manner with the funds necessary for the running of the enterprise. Nothing could illustrate better the unhealthy conditions which are a result of paper inflation.

The Polish Government is making strong efforts to put its financial system on a saner basis. On August 27th a new decree introducing an income and property tax was published. The existence minimum free from taxation is varying, according to the size of the locality, from 2,500 to 6,000 marks. The following statement may give an idea of the rates :—

Marks.		Marks.
10,000	income-tax	190
30,000	,,	1,680
50,000	,,	3,875
100,000	,,	11,000
500,000	,,	125,000
1,000,000	,,	280,000

Unmarried persons with an income of more than 12,000 marks pay an extra tax of 20 per cent.

The scale of the property tax is progressive, but as a whole it is very moderate. It rises from 0.085 per cent. for a capital of more than 20,000 marks to 0.5 for a capital of six million marks.

The new taxes will be payable from January 1, 1921. It may be doubted if the Ministry of Finance will succeed in preparing until the end of this year all the measures necessary for the introduction of the new taxes. Certainly a great part of the national income will evade the tax, because all the profits made in speculation and profiteering, which actually absorb so much of the nation's energies and capital, will be hardly detected by the financial authorities.

During the time of occupation of a part of Lithuania the Polish Government organised there from November, 1919, to March, 1920, a census of the population. It shows how great was the devastation caused by the war in these regions. In comparison with 1912, the town population has decreased in average by 40 per cent. In some towns, as, for instance, in Troki, the decrease amounts to 68.9 per cent., in Dzisna to 67.5 per cent., in Oshmiany to 61.8 per cent. In Vilna, the capital of Lithuania, there are actually 34.7 per cent. less than in 1912.

The Hamburg-America Line intends to start, together with the Harriman concern, an emigration service from Danzig. The first emigration steamer of the Hamburg-America Line will be probably ready in April, 1921.

JAPAN.—THE NEW TARIFF—PRECAUTIONS AGAINST DUMPING.

(FROM OUR CORRESPONDENT.)

TOKYO, August 15.

AMONG the more important measures adopted by the session of the Imperial Diet recently ended was a new tariff Law which has much interest for the manufacturer and the business man as a protective scheme to prevent dumping and to foster native enterprise. The Law is to come into effect in the near future.

According to the new Law the Japanese Government will create a Board authorised to decide whether goods that foreign manufacturers or merchants bring into Japan are being offered for sale at unlawfully low prices. This Board will be composed of experts, Government officials, and experienced manufacturers and merchants, who apparently have the right to decide the whole matter as to dumping. On the advice of this Board the Government will impose surtaxes on cargo branded as "dumped" by the Board. This tax is in addition to the normal import duties fixed by the Statute Tariff. The maximum limit to the surtaxes will be the difference between the normal market value and the price quoted by the importers of the dumped commodities. Even goods imported before the actual operation of this Law may not be exempt from surtax if placed on the market after the Law comes into effect. The first section of the new Law is thus concerned with dumping.

The second section of the new tariff regulation provides that fuel oil imported expressly on behalf of the Japanese Government shall be duty free if its specific gravity is in excess of 0.904 at 15 degrees centigrade. It provides, further, that all animals imported by public bodies for breeding purposes, or for manufacturing serums, as well as all articles for exhibition purposes, shall be duty free.

The third section of the new tariff schedule is what will have the most serious effect on foreign trade. This section imposes a heavy additional tax on wines and spirits, as well as upon dyes and numerous other commodities largely imported by Japan. The new measure will considerably affect the prohibition countries which have been disposing of their surplus stock in Japan. Wine in bottle is to be taxed at the rate of 47.80 yen per 100 litres instead of 40 yen as heretofore. Beer must pay 16.40 yen in place of 12 yen as formerly. Materials used in manufacturing dyes and for dyeing are to be duty free, including certain skins and fats as well as some mineral products and woods; but heavier taxes are placed on manufactured goods such as candles, saffron, iodine, bromide, zinc powder, salycilic acid, aspirin, bromide of potash, citric acid, alcohol, denatured alcohol, antipirin, aniline salt, artificial indigo, and coal-tar dyes, including alizarine and aniline colours. Most important among these items is coal-tar dye, the old rate on which was 7 yen per 123 lbs; the new law imposes 35 per cent. *ad valorem*, and on artificial indigo 30 per cent. *ad valorem* in place of 40 yen per 123 lbs as before. New duties on machine tools are also very heavy, that on tools the weight of which does not exceed 25 kilograms being raised to 50 yen instead of 37.50, and other weights are raised to a similar extent.

Already the new schedule has created a sensation in the Japanese dye market, and there are indications of a still greater advance. Dyes like blue bamboo, always in big demand, which have been going at 2,000 yen per 100 rin, can now command as much as 2,700 yen per 100 rin, and

sulphur blue and Japanese methyl violet have proportionately gone up in price. Thus is Japan protecting her infant dye manufactures, created by the late war and nurtured at the expense of the nation. Indeed, one reason why the new tariff is to come into force so promptly after its adoption is to keep out foreign competition in dyes as soon as possible.

SWEDEN.—HIGH PRICES—TRADE CONDITIONS—EXCHANGE.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, September 15.

EVERYBODY is complaining about increased slackness in trade and industry and augmented cost of living. During last month, for instance, the official index compiled by the Board of Social Welfare recorded a rise in foodstuff prices by 35 per cent. as compared with July, the enhancements referring mainly to milk, butter, eggs, and sugar, whereas for lighting, fuel, meat, and fish the rise in prices was not so great. For certain kinds of necessities, especially for wheat, flour and coffee, prices went down, but not enough to counteract the inflation generally. Including lighting and fuel, foodstuff costs have now risen from July, 1914 (208 per cent.), to 308 per cent. Although in certain kinds of trade—and mainly in lines supplying articles for the manufacturing industry—slight, and may be only temporary, signs of an improvement are noticeable, the general tendency is downward. The first report of a discount in prices came forward the other day, when I heard that a British firm exporting belting advised its clients of a reduction in prices of 3 per cent., to take force on and after October 1st next. Purchases are made on a much restricted scale, the old careful policy is being resorted to, and everything points to a gradual return to normal habits and rules in business life. The Stock Exchange has, of course, been much shaken up of late with heavy losses, and this notwithstanding the fact that the elections to the Second Chamber of the Diet have so far gone strongly against the supporters of the feared Socialisation idea. Shipping shares have depreciated considerably, with the slump in the freight market, and also probably on account of some unverified rumours that one or two leading companies are in bad straits and have to sell off their tonnage. The last reported sales in the shipping market are, however, quite justified and good policy, old boats still fetching a premium being parted with and the money invested in new tonnage. Swedish currency is occupying a very favourable position, all foreign rates going down lately. The German marks are lower than for a long time, closing yesterday at 8.60 Norwegian, and Danish crowns have receded heavily lately, and for notes in these currencies only 67 for 100 are now paid.

SWITZERLAND.—THE FREE ZONE.

(FROM OUR CORRESPONDENT.)

GENEVA, September 21.

YOUR Paris correspondent mentions the negotiations between Switzerland and France concerning the so-called "Zone franche," the district of France bordering Geneva and its lake. It is necessary to point out that France, according to the Vienna Treaty of 1815 and according to the Versailles Treaty of 1919, is not entitled to create a Customs line on this part of her frontier without the consent of the Swiss Government. The military neutrality of Haute-Savoie is already abolished, and plays no *rôle* in the present discussions. Switzerland also does not insist on the right to sell to the population of the "Zone franche" any other goods than those consumed by the local inhabitants. The exclusion of German goods from freely entering the zone would meet resistance neither from the Swiss authorities nor from the Savoyard population. But your correspondent forgets the principal point, and that is the fact that the agricultural production of the free zone is entirely organised for the near town market of Geneva, and the considerable distance to the next important French town, Lyons, would damage Savoyard agriculture, that is, three-quarters of the Savoyard population.

Every Description of Banking Business.

On the other hand, the craftsmen and small retailers of Geneva could not do without the custom of the "Zoniens." Switzerland will surely agree with the organisation of a French Customs service at the frontier of her cantons Geneva and Valais, if guarantees were given that no administrative arbitration will hamper free export of agricultural goods to Geneva and free export of Geneva retail goods to the zone.

The abolition of the Customs line between the zone and the rest of France is an urgent necessity from the point of view of the development of hydro-electric industry in Haute-Savoie. Last week M. Millerand visited the President of the Swiss Confederation, and it seems as if there will happen a temporary agreement, leaving the definitive solution to the times when the exchange situation will be re-established.

Letters to the Editor.

MESSRS KRUPP'S COAL CONSUMPTION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The edition number 4,019 of the *Economist*, dated September 4th last, publishes an article by your Paris correspondent of August 31st, which, among other things, expresses doubt as regards the *bonâ-fides* of Germany in the fulfilment of her obligation as regards the delivery of coal.

In this connection the article states as a fact that a number of German industrial enterprises have since the Armistice more than doubled their output as compared with the year 1914. As a most striking instance the firm of Krupp in Essen is mentioned, that is said now to employ 54,000 men as compared with 33,000 in 1914.

Your correspondent then goes on to say: "Quite apart from the fact that Krupp's are now undoubtedly manufacturing 12-inch and other calibre guns, much the same as before the war, in spite of the express terms of the Versailles Treaty, people here find it difficult to understand how Germany justifies her failure to furnish France with the coal to which she is entitled, when it is known that the consumption of coal and other materials by the Krupp works alone, in 1914 and 1920, is represented by the following striking comparative figures (we quote those for coal, coke, and iron ore):—

	1914. Tons.		1920. Tons.
Coal	1,500,000	....	2,500,000
Coke	1,558,000	....	3,763,000
Iron ore	4,600,000	....	7,820,000

Similar figures are stated also for other works.

The importance of your periodical among commercial and industrial circles of the whole world have induced us to lay aside our reserve to which habitually, and on principle, we confine ourselves as regards Press news. But in face of this very importance of your journal we cannot refrain from expressing our surprise that you should have opened your columns to such an article.

When the *Echo de Paris* a few weeks ago published an article dealing with the manufacture of war material in our works, we declared that for months past we had, either directly or indirectly, manufactured no manner of war material. But every kind of denial seems futile in the face of such assertions, constantly and intentionally repeated as they are.

Is it not an imputation of a downright offensive nature to the numerous English and French officers, who carry out a constant control over the manufacture of articles in our shops, and who conscientiously responding to their duty search the most remote corners of our works, to pretend that under their very eyes war material should be manufactured?

As regards the number of our employed at our Essen works the correct figures are the following:—

Average during the year 1913-14.. 42,423, including officials.
" " " 1919-20.. 45,505 " "

In judging these figures one must bear in mind that the working hours have been reduced from ten to eight, and that the scarcity of raw material forces upon us in a growing measure the conversion from rough and semi-finished products to finished articles of refined workmanship, and therefore necessitates an increase of labour.

With reference to the figures stated on the consumption of coal, coke, and so forth, we should only be too glad if quantities corresponding to the figures given by your correspondent for 1920 were at our disposal, even to an approximate degree. These figures, however, are so far off the mark that anyone who has the slightest knowledge of the matter will see their absurdity at the first glance.

As a matter of fact, the consumption of ore, coal, and of other material of the entirety of the Krupp works during the year July-June, 1919-20, is very considerably short of that of the year 1913-14. This is not to be wondered at, since out of our 16 existing blast furnaces to which no addition has been made since 1914, for the greater part of the year 1919-20 only six were working. The consumption of ore did not amount to one-seventh of that mentioned in the article for 1919-20. Whether in future even this reduced quantity of ore can be worked will depend on the question whether the coal rations allotted to us will still be further cut down. The coal and coke quantities at our disposal at present hardly amounts to one-quarter of the figure stated for 1919-20.

We should be greatly obliged to you, if you would kindly open your columns to these lines, which simply put facts right.—We remain, yours truly,

FRIED. KRUPP, Aktiengesellschaft Das Direktorium.
Essen, September 16th, 1920.

SIR LEO'S TRIUMPH.

"The Triumph of Nationalisation." By Sir Leo Chiozza Money. Cassell and Co. 7s 6d net.

IN his new book on nationalisation Sir Leo Chiozza Money appears to act upon the principle that if he only says a thing often enough the world will believe it to be true. This volume consists of a jumble of examples of the failure of private enterprise, and the alleged success of State enterprise. With regard to the former, it is not worth while to pause to examine the examples given, for no sane person has ever contended that private enterprise is uniformly successful. With regard to the alleged success of State enterprise, Sir Leo's examples can best be described as little bits of fact carefully selected to bolster up a theory. They count for nothing in contrast with the broad facts that all over the world public enterprise fails in competition with private enterprise, and that in our own country at the present moment every nationalised concern is run at a loss which has to be made good out of the revenue derived from taxing private enterprise.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

Ticket.	Account.
September 29.	September 30.

With each day bringing its fresh set of coal crisis conditions, the Stock Exchange has been in an unsettled mood throughout the week. On Wednesday night, and again on Thursday afternoon, there was a good deal of optimism in regard to an immediate settlement with the miners, and it may almost be said that every hour of business has given rise to fresh rumours, hopes, and apprehensions. All things considered, it is a little surprising that business should have been as active as it has been. Increasing difficulties, however, were encountered by sellers, who desired to obtain reasonable bids for such stocks and shares as are not included in what may be termed the most liquid markets of all. It has been easy enough to buy anything, but a different state of affairs sometimes ruled in regard to selling.

Underwriters of the Five-Towns loan received an average of 71 per cent. of their obligations. The proportions ranged from 44 per cent. in the case of the Bristol stock to 91 per cent. in that of the Swansea loan. Prices of the various stocks accordingly gave way to discounts ranging from ½ to 2 points, but on the fall a sharp run of investment buying was reported. Brighton Sixes went up to 1 premium. The War Loan and other Government securities have been moving narrowly, giving nothing very definite in the shape of a lead to the many investors who have been studying the price of the stock as a possible index to public feeling in regard to a strike. India sterling stocks gave way.

Japanese Four and a-Half per Cents. went up to 108, and dropped to 106 in connection with movements in the American rate of exchange. French bonds, after showing remarkable strength, suffered smart reaction, from which there was again something of a rally. Dollar securities of all kinds have been on the rise, though in less violent fashion than last week. South American bonds are generally quiet, and Mexicans came under a cloud, the absence of fresh news tending to disappointment on the part of those who looked for the immediate announcement of a funding scheme to deal with overdue coupons, this same tendency applying to other Mexican descriptions, except those in the mining markets.

The Home Railway market has maintained noticeable steadiness, and the Undergrounds further advanced, in consequence of the dividend hopes excited by the revised scale of fares coming into operation to-morrow (Sunday). A noticeable movement in this department is the advance of North-Westerns and the heavy stocks. Preferred stocks are also better, though the prior-charge issues continue heavy. Canadian Pacifics further improved. Grand Trunks are neglected, Mexicans inclined to ease off, and Argentine railways not much affected by the announcement of dividends which fulfilled general expectation. The Argentine railway markets receives a fair amount of attention from the investor, without, however, prices being materially altered thereby.

Rubber fell to a shade below 1s 6d per lb, and the market weakened further. On a feeble rally in the price of the produce, there was a little inquiry for certain of the leading shares, but on balance prices are again down. In the oil market the pendulum has swung erratically. Business fell off to a considerable extent, though the public continue to deal with a tolerable amount of freedom in the popular oil shares. The outstanding features are a jump in Trinidad Leaseholds and strong rallies in the market giants. The insurance department displays remarkable strength, and big rises have been recor led in all the principal shares. Evidently the long-protracted liquidation of Liverpool holdings has come to an end, and, in recognition of the financial strength of the leading companies and the possibilities of melon-cutting in years to come, the investor pure and simple is attracted to the market as one in which shares can be safely bought for the longer shot. Royal Exchange shares rose £50 in four days. The banking market is almost ignored. Shipping shares are harder, in spite of the coal outlook. P. and O. and Cunards are decidedly better. Among textiles, the latest trouble in the cotton trade formed the market excuse for the scaling down of quotations, though the fall did not go far, and was soon checked. Shares in companies especially connected with the coal trade—iron, steel, engineering, for instance—have kept surprisingly firm. Electrical descriptions hold the steadier tendency, which they derived from settlement of the dispute in the trade. Gas stocks are quiet after their upward march, and fresh little excitements have prevailed around rises in such shares as British Oil Cakes, African and Eastern, and others. Lively dealings in Dunlops occurred owing to the new issue, applications for which must be sent in to-day at the latest. At the moment, the price of the old is relatively cheaper than that of the new, making allowance for the dividend accrued in the latter.

In the Kaffir market, the high price of gold fails to have any effect in attracting the notice of the public to South African shares. A fire on the Knight's Deep property, involving material destruction, caused the price of the shares to fall from 7s to 3s 6d, but a recovery to 5s 6d occurred on the expectation that the insurance will make up for the greater part of the loss. Paris has been in a particularly wavering mood, and De Beers and Rio Tintos, with other French favourites, moved erratically. Mexican mining shares spurted sharply on the remarkable developments reported from the Esperanza property, Esperanzas enjoying a mild boom. Burma Corporations, after being a good market at 14s 6d in their split form, went back about a shilling. Tin shares have received no attention worth mentioning. Indian and New Zealand mining descriptions are a little better.

5-15 Year Treasury Bonds, repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. These are still on offer. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

London Housing Bonds.—Registered bonds for £5 each or multiples thereof are obtainable for terms of 5, 10, or 15 years, at applicant's choice. Six per cent. interest and full repayment when due are guaranteed by the London County Council on the security of London's rates. Interest payable each September 30th and March 31st. The money will be applied solely for the purpose of housing schemes approved by the Government, and in particular to finance the housing schemes of the Metropolitan Borough Councils. We referred to these bonds in a leader in the *Economist* on June 12th, page 1282.

Charles Semon and Co, Limited.—Authorised and issued capital £600,000, divided into 350,000 7½ per cent. cumulative preference shares of £1 each and 250,000 ordinary shares. The whole of the ordinary shares of the company have been issued to the Textile Corporation, Limited, who paid £2 per share in January last. This is an offer of 349,593 of the above-mentioned preference shares at 17s per share. There are no debentures. The capital and cumulative dividends of the preference shares are guaranteed by the Textile Corporation, Limited. Net assets of Charles Semon and Co., Limited, are valued at £600,000, and profits are shown from 1910. It is stated that a 10 per cent. interim dividend on the ordinary shares of the Textile Corporation has been paid. The financial arrangements of these two companies are curiously interwoven. In the *Economist* for January 31, 1920, when reviewing the prospectus of the Textile Corporation, we set out in detail various agreements between Charles Semon and Co., Limited, and others, which we advise our readers to refer to. Holders of these preference shares have one vote per share as compared with holders of the ordinary shares, who are entitled to two votes per share. While the necessity for these complicated financial arrangements is not apparent, the shares appear to be a reasonable offer, and fairly well secured.

The Batavia and General Plantations Trust, Limited.—Authorised capital £1,000,000 in £1 shares, of which 544,057 have been issued. This is an issue at par of £100,000 five-year 7½ per cent. (free of income-tax) deposit notes, repayable at 105 per cent. by drawings or purchase. These notes are entitled to half surplus profits after payment of 7½ per cent. dividend on the issued capital. The prospectus states that "applications for over £20,000 have already been made under the priority rights of allotment given to shareholders." Holders of these notes are also offered conversion rights at par into ordinary shares. No debentures can be issued without the consent of the holders of these notes. The Batavia and General Plantation Trust, Limited, was incorporated to acquire the undertakings of the Batavia Investments, Limited, the Plantations Trust, Limited, and Plantation and General Developments, Limited, the purchase consideration being 544,050 fully-paid shares of the trust. Assets are valued at £578,000, but it should be noted that this is a valuation by directors. For 1918 a dividend of 6⅔ per cent. was declared, but the prospectus states "payment has been deferred pending remittances from Java." The offer to give half surplus profits to note holders for £100,000, after holders of £544,057 in ordinary shares have received 7½ per cent. dividend seems very attractive, and in the circumstances it is curious that shareholders only applied for £20,000 of these notes. If existing shareholders did not support the issue sufficiently, it is questionable if outside investors will be persuaded to come in.

Norton's Cinemas and Theatres, Limited.—Authorised capital £50,000, divided into shares of £1 each. The company has been formed to acquire four freehold and leasehold picture theatres, also leases or tenancies of four other premises. Mr Norton will sell to the company two theatres for £30,000. No independent valuation of these two theatres is given. The remaining properties are valued at £11,633, exclusive of goodwill. The purchase price for these is to be £12,600. Out of a total purchase price of £42,600, apparently only £5,000 may be taken in shares. This undertaking is entirely a matter for consideration by local investors—preferably for those with knowledge of the directors.

Major and Co.—We are informed that the recent issue of £100,000 8½ per cent. preference shares of Major and Co., Limited, has been over-subscribed.

COMPANY MEETINGS, &c.

KINTA KELLAS RUBBER ESTATES, LIMITED.

RESULTS OF THE RECENT ISSUE—FUTURE PROSPECTS.

The tenth ordinary general meeting of the Kinta Kellas Rubber Estates, Limited, was held at the offices of the company, 125 High Holborn, London, on the 20th instant, Mr Edward Bedford, C.E. (the chairman) presiding.

A representative of Messrs Taylor, Noble and Co., Limited (agents and secretaries), having read the notice convening the meeting and the report of the auditors,

The Chairman said: On the debit side of the balance-sheet you will note that the share issue now stands at 1,275,000 shares, as compared with 1,139,270 shares. The difference of 135,730 shares were issued to shareholders early in the year at 4s 3d per share, and all taken up. In making this issue the whole circumstances were most carefully considered by your board of directors, who finally decided on an issue at 4s 3d per 2s share, equivalent to a premium of 112½ per cent. Our agents, Messrs Taylor, Noble and Co., Limited, guaranteed the issue at 5 per cent., and about one-third of our shareholders heavily over-subscribed the issue, which was an unqualified success. This has placed the company in a very strong financial position.

Coming to the profit and loss account, our crop of 700,023 lbs realised £70,388; in addition we have £2,015 realised from the sale of the balance of previous year's crop, which was taken into the last accounts at 1s per lb. Our gross average price was 2s 2.43d per lb, which was quite a good average. Costs again show a reduction at 8.83d per lb, comparing with 9.41d per lb for the preceding year.

As to the future, we have, as you know, been planting up out of profits to replace areas lost in floods. We have now 2,258 acres of good rubber. We shall continue planting as labour is available, and we shall in future charge the cost of this to capital, as we consider our rubber, which now stands at about £65 per acre, represents very adequate value for its cost. This cost includes all costly factory and other buildings, plant, roads and full equipment. The crop estimate for the current year is for 800,000 lbs, to be produced at the somewhat increased cost of 9.59d per lb. This 800,000 lbs is an estimated increase of about 14 per cent. on last year's crop, but, as for the five months to August 31st we have already secured 349,322 lbs, which shows a comparative increase of 40 per cent. on the corresponding crop for last year, it looks as though our estimated crop would be easily secured.

As I told you last year, we sold forward for 1920 84 tons ex go-down in the East at 1s 11½d per lb. We have now sold 84 tons for delivery during 1921 at 2s 5d per lb. These sales go a long way towards securing the local costs of the estate,

Without any desire to weary you or unnessarily belabour the disastrous effect the last Budget has on our company, it may not be out of place here to mention that we, being a young rubber company, have no pre-war standard of profits, like many others in Malaya, to help us. Our industry lies outside this country altogether, and yet, in spite of this, we shall have to pay excess profits duty at 60 per cent., corporation tax at 1s, and income-tax at 6s.

Mr A. T. Macer, in seconding the resolution, said that he thought shareholders would agree that the report was the best so far issued by the company. He quite agreed with the remarks of the chairman regarding the inequitable working of the excess profits duty. It was hardly to be wondered at that some of the bigger financial houses in the City were thinking of transferring to the other side.

The resolution was carried unanimously.

KALIDJEROEK RUBBER COMPANY, LIMITED.

A VERY SATISFACTORY YEAR.

The tenth ordinary annual general meeting of the Kalidjeroek Rubber Company, Limited, was held, on the 24th instant, at the registered offices of the company, 41 Eastcheap, London, Mr Vernon Wethered, chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said that they were highly satisfactory except as regarded the excess profits duty, which operated very unfairly against this company, and penalised them for their very virtues. The profit was £18,176; they had paid an interim dividend of 10 per cent., and were now paying a final dividend of 22½ per cent., making 32½ per cent. in all. There were 1,510 acres in rubber, of which 917 acres were being tapped at the end of the year; and there were 225 acres of coffee planted as a separate cultivation, to which they were adding year by year. They had reached a stage of development when they thought that, instead of going on inter-planting coffee in rubber, it was better to regard them as distinct cultivations, more especially as their interest in rubber was to be extended by their associating themselves with the Baru (Java) Estates, Limited, in the purchase of a concession of 6,000 acres in Dutch Borneo. This was a good arrangement for both companies, as they had the requisite cash reserves for developing the property.

Work had already begun upon it, and this proposition would be exclusively rubber.

There were certain features in the current year's prospects which were not so favourable as the past year. Up to June prices of rubber were fairly good, but they had since fallen away, reflecting adverse conditions in the way of finance and trade generally all over the world. What was most important of all was that things were no better in America, and even in some respects perhaps worse. They had to some extent mitigated this by selling forward. They had contracts still running "in store Java," 75 per cent. first grade, and 25 per cent. Browns for 1920-30 tons at 1s 9½d and 84 tons at 1s 10¾d; and for 1921 60 tons at 2s 2½d. It must be understood that 3½d should be added to these prices when comparing them with prime sheet delivered ex-warehouse London. Another adverse factor was that the excess profits duty had been raised to 60 per cent., and there was also a new corporation tax. In spite of these adverse factors, he thought that a fair dividend should be forthcoming the next time they met. The demand for rubber was probably now near the worst, and they might hope that the recovery which was generally anticipated by many conversant with the rubber industry would come sooner rather than later.

Mr J. L. Burt, in seconding the resolution, expressed satisfaction with his visit to the estate.

The report was unanimously adopted, and the usual formal business transacted.

† Rates lowered ½% on Jan. 2, 1918, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ¼% on Nov. 6, 1919, and 1% to 5% on April 15, 1920. ‖ Lowered from 3½% to 3% on June 5, 1918, but was raised to 3½% on July 31, 1919, to 3¾% on Oct. 6, 1919, to 4¼% on Nov. 6, 1919, and 5¼% on April 15, 1920. * Changed from 4½% to 4% on Dec. 27, 1917, and from 4% to 3½% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 15, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4½% to 5¼%, and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months' Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5¼%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

BULLION.

The gold movements to or from the Bank of England are no longer announced. For the week ended September 22, 1920, the stock of coin and bullion showed a decrease of £28,724 compared with the previous return.

IMPORTS AND EXPORTS OF GOLD.

Gold Imported into the United Kingdom.		Gold Exported from the United Kingdom.	
Countries from which Consigned.	Week Ended Sept. 22, 1920.	Countries to which Exported.	Week Ended Sept. 22, 1920.
	£		£
Netherlands	2,305	Switzerland	70,500
New Zealand	1,745	Madras	2,500
Total value of imports of gold	4,050	Total declared value of exports registered in the week	73,000

Messrs Samuel Montagu and Co. write as follows on September 23rd:—"Gold: The Bank of England gold reserve against its note issue is practically unchanged—£121,558,755, as against £121,557,845 last week. New York reports the arrival of $10,000,000 and $3,000,000 in gold from France and London respectively. For the reasons detailed in our letter of last week, the arrivals of gold have been negligible. It continues to be in good demand for India. The gold production of the Belgian Congo during the last three years was: 3,573 kilos in 1917, 3,605 kilos in 1918, and 3,450 kilos in 1919. The following were the United Kingdom total gold imports and exports during the month of August, 1920:—Imports, £3,703,063; exports, £4,709,187. Silver: Prices have been fairly well maintained during the week, mainly owing to Indian covering operations, and there has been some purchases for China. This does not seem to indicate any desire to absorb silver in the latter quarter, but have been dictated by the absence of bills offering. The position of the China exchange is still dominated by strong speculative influences, which, from the silver point of view, are not an element of strength. Continental supplies have been rather larger, possibly owing to the recent increased depreciation of the German mark. On the 21st instant, in consequence of better supplies of silver for prompt delivery, there again appeared a premium in the price for forward delivery—the first time since August 17th last.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	Aug. 31, 1920.	Sept. 7, 1920.	Sept. 15, 1920.

NOTICES.

The London Joint City and Midland Bank, Limited, have opened a new branch at 21-22 High street, Christchurch, Hants, under the management of Mr J. G. Gibson. It is also announced that new offices have been opened at East Ardsley (sub to 56 Westgate, Wakefield) and at Praze (sub to Camborne).

Barclays Bank, Limited, announce that they will open on Monday next, the 27th inst., a branch at West street, Rhayader, under the management of Mr Charles Ambrose James.

Mr John A. Terrace, hitherto acting joint manager of the London office of the Guaranty Trust Company of New York, has been appointed manager by the executive committee of the board of directors of the company.

The Standard Bank of South Africa, Limited, announce the opening of agencies at Doyles Prospect (Cape Province), Lindeques Drift (Transvaal), and Lumbwa (Kenia Colony). The agency at Theunissen (Orange Free State) has been converted into a full branch; also a branch has been opened at Dedza, in Nyasaland.

A branch of the National Bank of South Africa, Limited, has been opened at Molteno, Cape Province. The sub-branches of this bank at Warmbaths and Davel, Transvaal, have been converted into full branches as from September 20th. They have also opened a branch at Eldoret, British East Africa.

The London office of the Union Bank of Canada announces that branches of the bank have been opened at Honeywood, Ont. (sub to Shelburne, Ont.), Mansfield, Ont. (sub to Shelburne, Ont.), and Minesing, Ont. (sub to Barrie, Ont.).

The Merchants' Bank of Canada have opened branches at Montreal—Ontario Street East; North Hatley, Quebec; Lisle, Ontario; and at Instow, Sask.

RUBBER OUTPUTS AND DIVIDENDS.

In the table below we give the latest and past three years outputs, and dividends for five complete years of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

Reports and Notices.

Farrow's Bank, Limited, announce that they have opened a branch at Montrose.

At meetings of the security-holders of the Western Railway of Havana, Limited, and the Cuban Central Railways, Limited, held on the 17th inst. at Winchester House, London, E.C., the scheme for amalgamation with the United Railways of the Havana and Regla Warehouses, Limited, was approved.

The offices of Rosehaugh Company, Limited, Culloden Consolidated Company, Limited, Broome (Selangor) Rubber Plantations, Limited, Caledonian (Ceylon) Tea and Rubber Estates, Limited, Naparima Oilfields of Trinidad, Limited, are now at 4 Buckingham gate, S.W. 1.

Major the Hon. J. J. Astor has been appointed a director of Welwyn Garden City, Limited.

GOVERNMENT STOCKS, &c

INDIA 3½ PER CENT. RUPEE LOAN, 1854-55.—The Bank of England give notice that on and after October 1st next they will be prepared to issue new sheets of coupons to the proprietors of loan certificates of the India 3½ per Cent. Rupee Loan, 1854-55. The talons attached to the last coupon sheets must be lodged at the Colonial, &c., Office (India Section), Bank of England, in sufficient time to allow three clear days for examination, and must be listed on forms obtainable at that office.

REPUBLIC OF NICARAGUA GOLD BONDS, 1909.—With reference to the above bonds, the Council of Foreign Bondholders have received a telegram from the bankers in New York notifying the payment of the September instalment of the Debt Service in accordance with the arrangement of May 25, 1912.

BANKS.

COMMONWEALTH BANK OF AUSTRALIA.—Balance-sheet figures for the half-year to June 30th last show that deposits have increased since the previous half-year by 1¾ millions, and stand at £58,985,310, including £17,982,402 at the credit of 539,795 depositors in the savings bank department. Coin and cash balances amount to £6,092,584; Australian Government notes, £1,964,722; fixed deposits with other banks, £1,029,000; while money at short call in London totals £21,430,000. These various cash items, with investments in British, Colonial, and Government securities, £17,975,463, aggregate £48,491,769, out of total assets of £63,679,412, the assets of six months previously being £61,617,736. The profit for the half-year is £392,604, as against £388,672 for the corresponding half-year of 1919, the total profits for the 12 months ending June 30, 1920, being £833,134.

MISCELLANEOUS.

IMPERIAL AND FOREIGN CORPORATION.—The report for the year ended June 30, 1920, states that the income from investments, commissions, &c., amounted to £137,494, as compared with £138,670 for the previous year. After meeting expenses of administration there is a balance of £113,406, to which must be added the amount brought forward, £30,388, making available £143,794. The directors recom-

mend a final dividend to be paid (when the scheme of arrangement is carried into effect) at the rate of 6 per cent. per annum on preference shares to June 30, 1920, subject to tax, the balance of £94,959 to be utilised for adjusting the book figure of investments in order to conform with the proposal in the scheme of arrangement to be submitted to the shareholders on September 24th. A scheme has been submitted to the shareholders for meeting the situation with regard to the Russian interests of the corporation.

PARTINGTON STEEL AND IRON.—The report states that the profit for the year ended June 30, 1920, after providing for depreciation, interest on debentures, interest on five-year notes, interest on loan from the Ministry of Munitions, excess profits duty and corporation profits tax, amounts to £171,691, which, with the amount brought forward, £10,737, provides a disposable balance of £182,429. The directors recommend a dividend of 10 per cent. for the past year on the ordinary shares, that £100,000 be placed to reserve fund. and £26,429 carried forward.

PARENT TYRE COMPANY, LIMITED.—Including the balance brought forward from last year, the amount available for distribution is £184,630, which compares with £175,833 for the year ended August 31, 1919. Dividends absorb £180,650, additional remuneration to directors £1,667, and £2,314 is carried forward, as against £17 brought in the accounts from 1919. During the year calls amounting to £625,000 were paid on the 1,500,000 "C" preference shares of the Dunlop Rubber Company, Limited. The balance-sheet will be found analysed in another column.

PEARSON AND KNOWLES COAL AND IRON COMPANY, LIMITED.—Profits for year ended June 30, 1920, amount to £228,318. The ordinary shares receive 10 per cent. distribution, free of tax, while £96,000 is added to reserve. The balance-sheet incorporates the assets and liabilities of Ryland Brothers, Limited. Total assets amount to £3,113,118. We have analysed the balance-sheet in another column.

STEWARTS AND LLOYDS, LIMITED.—Extraordinary meetings are to be held for the purpose of considering, and if so resolved, passing the resolutions necessary to enable the directors to carry out the terms of a provisional agreement entered into with the directors of Alfred Hickman, Limited, Staffordshire Steel and Ingot Iron Works, Bilston, Staffordshire. This agreement provides that, subject to ratification by the holders of not less than 80 per cent. of the shares of Alfred Hickman, Limited, and to confirmation of the scheme by the shareholders of Stewarts and Lloyds, Limited, there should be issued and paid to the shareholders of Alfred Hickman, Limited, one deferred share of £1 in Stewarts and Lloyds, Limited, credited as fully paid, and 7s 6d in cash, in exchange for each ordinary or cumulative participating preference share in Alfred Hickman, Limited, surrendered. The necessary ratification by the shareholders of Alfred Hickman, Limited, is now complete.

KNIGHT'S DEEP, LIMITED.—The following information has been received from Johannesburg to-day:—"Mill and mill engine-house totally destroyed by fire, and portion of tube mill plant and small portion of boiler-house. Cyanide works saved, except damage to tailings wheel, also crusher station saved. Damage covered by insurance. All operations stopped and day-pay men not required being paid off, also officials given 30 days' notice."

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Harvesting of the remaining portions of cereal crops in this country is adversely affected by unsettled weather, operations being retarded in Northern and Western districts, but a fair clearance is reported from Eastern localities. Farmers have been at leisure to devote attention to theshings, and larger quantities are now coming forward. Well-conditioned samples command the maximum price of 95s on rail or 96s per qr delivered at the mill. Imported grades move off slowly, while somewhat nominal, pending the announcement of revised official prices expected shortly. Flour trade continues fairly active, especially for the product of native wheat, country makes claiming most attention. Prices were advanced by 22s 6d per sack from Monday last, both for G.R. grades and imported descriptions, the former now ruling at 86s ex mill, and the latter 86s 9d to 88s 3d per 280 lbs ex warehouse. Fairly liberal allocations of Chinese have lately occurred, but same do not appear to be favoured by bakers. Maize slow, and values weak in sympathy with a sharp decline in the forward market occasioned by lower Argentine freights and improved crop prospects in that country. Consumers appear to be fairly well stocked for the present, probably in view of the coal strike menace. Plate new ex ship 73s, landed 75s 6d, old landed 72s 6d per 480 lbs. On c.i.f. terms a cargo of Plate afloat sold 73s 6d, with 72s now the nearest value. Parcels of ditto were dealt in, per steamers due at 70s, afloat 71s 3d to 68s 6d, September-October 66s 9d, 67s, to 64s 6d, October-November 66s 3d, 64s 9d, 63s 6d per 480 lbs. Barley generally slow, maltsters being evidently well stocked at the moment, and native descriptions range from 80s to 105s, according to quality, 448 lbs. Feeding descriptions dull. No. 4 Canada Western quoted 75s, Canada feed 74s, Plate 74s, Morocco 78s to 81s, all landed terms. Danubian 70s 6d ex ship, all per 400 lbs. In the forward market few transactions occurred, and tendency easy. Parcels of No. 4 Canada Western, October-November, sold 64s 6d to 64s. Oats: English in fair request, with moderate offerings. New whites quoted 62s to 67s, grey winter 56s to 58s, and blacks 56s to 60s per 336 lbs. Imported dull. La Plata rules at 52s, American white clipped 53s 6d to 54s, Canadian nominally 65s, Norwegian 66s, all landed per 320 lbs. Forward business almost at a standstill, and Plate descriptions largely nominal, while small sales resulted in No. 2 Canada Western, October, at 54s, and No. 3 Ontario at 53s 3d to 52s 9d per 320 lbs. Beans quietly steady. English springs 100s to 105s, new winter 80s to 85s per 532 lbs. Peas in fair request. English maples 105s to 112s 6d, Duns 80s to 85s, small blues 100s to 120s per 504 lbs. Oatmeal firm, with a fair inquiry. Scottish ranges from £40 to £44, American £37 10s per ton. Homeward grain chartering quieter, and rates eased to 100s up-river to U.K./Continent, October-November, for maize, while a large steamer down-river was placed at 87s 6d per ton. North American markets dull, and rates nominal at 11s 6d to 12s range, Montreal to U.K., and 13s to 13s 6d Gulf loading, with 15s to 15s 6d quoted to Mediterranean ports per qr. Eastern markets firmer, and fixtures effected from Bombay/Karachi to U.K., October-November, at 80s to 82s 6d on dead weight. Tonnage is none too plentiful in this quarter, and reports that the embargo on wheat exports will be lifted in a few weeks' time has added further strength. Australian grain quiet, 125s being quoted for new season's loading. Danube firmer, and a fixture at 62s 6d to U.K./Continent shows a rise of 2s 6d per ton on the week.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1920-21, contrasted with 1919-20, 1918-19, and 1917-18.—(Particulars of imports of wheat and flour temporarily discontinued):—

THE IRON AND COAL TRADES.

Our Sheffield correspondent writes:—The pig-iron market continues firm, although there is a dearth of new business, and deliveries have only improved slightly, output being still unequal to consumption. In the finished and partly finished steel departments buying is limited to immediate needs and specifications are lighter. Except a few small sizes and sections and thin sheets, quicker delivery is now obtainable, and the execution of orders for railway and other heavy steel does not often extend over a month. The advance of £1 per ton to cover the higher railway rates is far from being general on finished iron and steel. The easing of the prices of soft basic steel and products thereof has excited an expectation among buyers of further concessions, and this feeling accentuates the stagnation of new business in all directions. The depression is spreading to some of the hand tool branches, particularly twist drills and cutters. The output of saws, joiners' and edge tools, farm tools, and artizans' knives has been far short of the needs of the world, and its disposal is fairly well assured for a long period. Here, however, the inquiries and orders are much less numerous than they have been. Cutlery makers are doing big business in table knives, both ordinary and stainless, and could sell many more than their output. Matters, however, are rather quiet in pen and pocket-knives and razors. Sheffield scissors are being undersold by German goods. A good many of the latter are below the high standard of finish of pre-war days. German tools for carpentry are also making their appearance, but not in very considerable quantity. There has lately been a distinct falling-off in the sales of expensive silver and plated ware, but the demand for the cheaper goods is being maintained at a high level. Collieries have this week been pressed for deliveries of steam and small coal, but they are increasing their own reserves, so that there has been rather less than usual for their customers. Gas companies have also endeavoured to increase their supplies. Small fuels are scarce, and supplies were stopped, this pending the decision in respect to the strike. The demand for house coals is very active. With the object of securing a fairly equable distribution, the Coal Merchants' Federation has issued instructions that not more than 10 cwts of coal shall be delivered to any customer, and only then provided that the consumer has less than a month's supply in his cellar. Quotations are the same as were given last week.

Our Glasgow correspondent (writing on Thursday) says:—The continued uncertainty as to the final outcome in the coal trade negotiations has naturally obstructed this week again the smooth running of business in all commercial circles in the West of Scotland, as elsewhere. In the cases of iron and steel, in all their ramifications, buyers and sellers have been absolutely unable to come to close quarters in the matter of new contracts, neither execution nor delivery being possible of definite adjustment. Consumers are particularly reticent in their action, as there are a crop of rumours in circulation as to American and Continental (chiefly Belgian and German) offers of manufactured steel material in this and other British markets at figures points below what are named at home. But in responsible quarters the disposition is to treat these stories with reserve, for the reason that producers find that there is a strong undercurrent of demand for all sections of British manufactures, which only waits on the assurance of industrial peace in order to materialise. Inquiries from India, China, South America, and nearly all colonies are on a healthy and expanding scale, and in other circumstances than obtain could, it is said, be largely covered. Meantime all branches of industry are inordinately busy, but for how long no one can say. That depends on the supplies of fuel, which in no instance will suffice for keeping steam up over a week or two—if the strike policy takes effect. Every effort has been made to accumulate reserves, but with little success. The colliers have taken good care of that, through limiting their outputs. Last week's supplies of Scotch coal were 250,000 tons below the quantity available for handling in the corresponding week in 1913, and that though the number of hewers was very much greater in the current period. It is evident that there is nothing for it but to wait on developments, which must arise, one way or another, immediately. Informed opinion here is inclined to take an optimistic view of the situation, but no opinion really counts at the moment.

Our Middlesbro' correspondent's report, dated September 23rd, is as follows:—Pig-iron: The market is in a state of suspended animation waiting the settlement or otherwise of the coal position. Prices of pig-iron are unchanged at 225s for No. 3 and No. 4 foundry Cleveland G.M.B., and 260s for mixed numbers East Coast hematite, all for home consumption. Manufactered iron and steel: There is a certain amount of foreign competition in steel bars, but not to any appreciable extent. Steel ship plates, home, £24 10s; steel ship angles, £24; iron ship angles, £30 15s; iron bars, £30; steel rails, £25 net. Iron ore: The ore trade is dull. A little forward business has been done, but buyers are not keen.

(France) Ltd. Deposits are received for fixed periods on terms which may be ascertained on application.

CUMBERLAND IRON.

(BY OUR WORKINGTON CORRESPONDENT.)

Except that activity is diminishing in the steel trade, very little change has occurred in the position of the staple industries of this district for several weeks past. The quietude that prevails in the hematite pig-iron trade is due not only to the fear of a coal strike, but also to the fact that makers are sold as far forward as, in the circumstances, they care to commit themselves, and it is doubtful whether in the event of the upshot of the negotiations between the Government and the Miners' Federation being all that can be desired, there will be much new business done until the middle or end of November. A coal strike would, of course, mean ruin to the hematite pig-iron trade, not only while it lasted, but for long months afterwards, for it would by reason of the heavy costs which would follow in its wake bring makers face to face with the American competition that is now becoming an actuality. If no strike takes place, however, it is still true to say that makers have another twelve months' good trade in front of them. Home requirements are still so large that alone they may be expected to absorb the full production of the twenty-seven furnaces in blast between Workington and Carnforth for a goodly portion of the winter. Certainly it will be next year before makers will have need to consider seriously the business which has been offered to them for the past twelve months by the Continent. The whole of the make continues to go straight into consumption, the Midlands, South Wales, and Scotland absorbing most, if not all, of the low phosphorus iron, and the local steelworks and foundries a great portion of the ordinary iron. Bessemer mixed numbers until Wednesday were quoted at £14 15s per ton at works, but a meeting of the West Coast Ironmasters was held on that day to decide what change, if any, was to be made in prices. There is a fairly keen demand for manganese alloys, ferro especially being an active market.

The outlook in the steel trade is not cheerful, and the mills are busy only on railway material and tube and strip steel. New business is scarce, and the orders on the books do not represent a tonnage which will permit operations to remain at the present scale throughout the winter.

The demand for native hematite ore is far heavier than can be satisfied, and Cumberland and North Lancashire smelters are taking all the metal that is being mined at the pits between Whitehaven and Hodbarrow. No ore can, therefore, be spared for the East Coast or for Scotland. The importations of Spanish ore are very considerable, and some ore is also being brought from Ireland.

A coal trimmers' strike at the local ports, which lasted for three weeks, and only terminated at the week-end, held up the shipping of coal to Ireland so effectively that for the first time since the war the local demand on industrial and landsale account was completely satisfied, and useful stocks were accumulated. The export of coal to Ireland, though now subject to new restrictions which remain in force until all danger of a coal strike has passed, has been resumed, and the whole of the output of the collieries is, therefore, being absorbed.

Local coke is in abundant supply, and there is a temporary glut, with the result that licences have been obtained for the export of 2,000 tons to France. This is the first shipment of local coke to the Continent for nearly twelve months. East Coast coke supplies to West Cumberland total about 10,000 tons a week, and to the Furness district 16,000 tons a week.

By-products are in keen request, and benzol and sulphate of ammonia are an inadequate make.

BY-PRODUCTS TRADE.

TAR PRODUCTS.—The market has changed very little since last report, the feature being scarcity of benzol. Pure quality is worth about 4s per gallon, and 90's 3s 9d and 3s 10d per gallon. The position in pitch remains unchanged, and London prices are now £11 per ton, with £10 15s offered on the East Coast. Crude naphthalene is still scarce, and much wanted by the firelighter trade; prices still have an upward tendency, and now range from £16 to £25 per ton; refined naphthalene remains about £55 per ton. Carbolic acid is weak, crude 60's being 3s 6d per gallon and 40 per cent. crystals 11d per lb. Cresylic acid is rather more active at 4s 4d per gallon; heavy naphtha steady at 3s 6d; solvent naphtha rather slack at 3s. There is very little of fresh interest in intermediate products. Aniline oil and salts are 1s 9d and 2s per lb respectively, while salicylic acid, of technical grade, has fallen to 2s 4d per lb. Apart from this the market continues steady, with prices firm.

SULPHATE OF AMMONIA.—There is no change to report in this market, and prices remain at £24 13s 6d per ton for home delivery. Export business is of small dimensions at rather lower prices, say £42 per ton.

THE COTTON TRADE.

MANCHESTER, September 23.

A very slow feeling has prevailed in all quarters of the market during the week. The absence of demand in most sections has been very pronounced. Buyers have held aloof, and further ground has been lost by producers. Many complaints have been met with from merchants with regard to the difficulties experienced in financing trade, and freer buying seems impossible until the money market is easier. Only sorting up lots have been sold in piece goods for India, and bids for China have been decidedly scarce. Scattered transactions have been put through for certain minor outlets East and West, but the turnover in cloth has been quite unimportant. Manufacturers are being compelled to curtail production on a larger scale, and unemployment in North and North-East Lancashire towns is assuming rather serious dimensions. The position of the yarn market has not been very much affected by the Oldham strikes, but American spinners have been rather firmer in quotation. The offtake, however, remains poor. Egyptian spinnings have been dull and easier in price.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says :—There was a strong feeling in well-informed quarters that the improvement in the demand for wool at the last series of London sales would prove to be temporary, and the course of trade in Coleman street this week has proved this to be correct. The demand has been restricted, and prices have shown a general decline. The effect on this market has been to make still more pronounced the acute depression of the past few weeks. There is very little new business passing in any section of the industry, and quotations for tops and yarns are all more or less nominal. Good average 64's tops may be quoted around 6s 6d, and 2-48's yarn out of this quality 11s to 11s 6d. In most cases holders are prepared to make considerable concessions when definite business is offered. The manufacturers' and spinners' federations have decided to recommend their members who find it necessary to work short time to close their mills from Friday evening to Tuesday morning. Many firms are already working short time, and it is expected that this will become general in the course of a few weeks.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Another series of Colonial wool sales opened in London last Tuesday, when there was the usual attendance of buyers. Considering that an interval of only two weeks has elapsed since the previous series, there is still a good deal of interest in the movement of raw material, and it is significant to find French buyers so well represented. It is regrettable that America is not more to the front as a buyer, particularly considering the favourable rate of exchange, but if more machinery commences running across the Atlantic, more buying will be done by representatives from that country, either in London or Australia. It is highly desirable that the entire industry should pull together, and so help to improve a situation which at present is by no means healthy. The very fact that the Soviet Government has made a move by purchasing both woollen and piece goods is a proof that Russia is in dire need of clothing of all kinds, and it is to be hoped that this is the beginning of a good trade. It has been known for some months that not only Russia but Germany and the whole of Eastern Europe are greatly in need of wool and clothing of all descriptions, and until all the markets on the Continent are open, it is not likely that the textile industry of the world will make any real improvement. No doubt the movement of values to a lower level, with its consequent prospect of cheaper cloths, will help to stimulate buying, but when all is said and done, the great need is for a broader basis of competition in London and a freer movement of wool, tops, noils, wastes, and yarns to pre-war markets on the Continent. Up to 1914 Germany was a great clearing centre for all Eastern European markets, and trade could be done to-day quite as easily if better financial facilities were available. Also there is a need for a more settled state of affairs in the political world. This would give an opportunity for the various Governments concerned to deal with the question of exchange. It is realised in all business circles how imperative it is that these matters should be dealt with as quickly as possible.

Nothing very great is expected to develop in connection with the current series of sales; 133,000 bales are being catalogued, and it will take the trade all their time to get through this quantity satisfactorily. The opening decline of 10 per cent. for merinos, and the easier tendency in crossbreds, is an evidence of the state of the textile industry generally, and if this decline does not become greater there will be every reason for thankfulness. No doubt many home trade users are waiting to see the result of the opening of the sales in Australia, and the fact that the British Government has given shipping companies a free hand to get home what is bought in Australia can be taken as an evidence that the authorities are desirous that the Colonial wool trade should get back to pre-war conditions with all possible speed. Some outrageous statements have been made in the Colonial Press, but the fact that every firm can buy freely in Australia and make their own arrangements for getting wool home as quickly as possible, shows clearly enough that the British authorities are anxious for a revival of the entire industry. Trade in consuming centres does not show much improvement, the quantity of standing machinery being on the increase.

AUSTRALIAN WOOL SALES.

Messrs Dalgety and Co. have received the following cable from their Melbourne branch :—"Wool sales start Adelaide October 1st, Sydney October 5th, Melbourne October 18th, Brisbane October 19th, Geelong October 26th, Western Australia October 29th.

THE TIMBER TRADE.

(FROM A CORRESPONDENT.)

The tone of the timber market over the past month has shown an easier tendency, the spot market now reflecting the recent fall in the Baltic freight market of some £4 a standard. Tonnage of large ships continues plentiful, with a better demand for small craft, and fixtures are now being done on a firm basis of 110s north of Bothnia, 100s Middle Gulf, and 90s to 95s Lower Gulf for clean cargoes, Scanfin charter, to U.K. east coast. Whether the bottom of the market is yet reached is uncertain, but so great are the costs of running steamers on this route that Swedish and Norwegian shipowners declare that they will lay up their tonnage if freights decline further. Roughly, present rates are four times those ruling before the war. Spot prices are irregular, and show a very wide range according to quality, condition, and nerves. For 2 by 7 from £38 up to £56 is being asked, for 2 by 4 £35 10s to £48; many further instances could be cited, but those given will suffice.

Stocks of Swedish and Finnish deals and battens are not so large as to warrant any nervousness, for this country has to lay in large supplies of timber to tide over the winter while the ports are closed, but importers regard with apprehension the likelihood of shippers sending their unsold balances over on consignment, which would immediately have a bad effect on the market. F.o.b. prices for this year's shipments have shown an easier tendency during the past few weeks; this is much more noticeable from Finland, whose shippers appear to be much more inclined to make concessions than their neighbours.

The foreign flooring market has not shown much improvement. Norwegian shippers are asking about £37 basis per standard, f.o.b., and the Swedes not quite so much. There is a very large stock here, and, with only a moderate demand, business is slack. Although the new houses consume a fair, regular quantity of floorings, the unrest in industry is holding back a very large amount of constructional work, in which not only those descriptions, but other sizes, would be used. Canadian spruce is very slow of sale, and stocks are large. Prices for native-grown woods keep firm for good quality of any kind, and are cheaper than foreign, either for soft or hard wood. The new railway rates are the cause of protests from all parts of the country, for they will have the effect of increasing prices to consumers at a conservative estimate of quite 6d a cubic foot. There is a large amount of poor quality native timber lying about the country which, owing to heavy haulage and increased railway costs, is now hardly worth lifting.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

The stronger tone in the market for linseed and linseed oil noted a week ago has continued, and there has been an appreciable advance in both. Higher freights and the unfavourable weather for seeding time in Argentina have combined to give Plate linseed a considerable degree of buoyancy, quotations advancing 30s to 40s in practically all positions. Old crop is firm up to £38 10s, being increased for spot and afloat to Hull, with slightly less for shipment; while new crop, after having a good trade at £35 for January-February shipment, was at Hull on Tuesday quoted 25s above this figure. Little has been done in Indian linseed, shippers offering slowly and quoting higher in view of a possible rise in freights, consequent on large demands on shipping for the wheat which has been released for export. The oil product has been in good request for spot and near delivery, principally on home account, although a moderate demand is also experienced for export. Large sales are reported to have taken place for January-April delivery round £76 and £77, ex Hull mill, these, in turn, having stimulated the demand for seed, since when £78 is quoted, or within £1 of spot value.

A little activity has been seen in cotton oils, chiefly for Bombay crude and ordinary refined (soap-making quality) but edible has been in poor demand, and next to no business recorded. The market for cottonseed has firmed up for spot seed, but nothing is offering at the time of writing for forward loading, either from Alexandria or Bombay.

Soya beans are offering more freely for shipment, but the demand for soya oil is negligible, and does not give encouragement to crushers to increase their commitments. Ground nut and palm kernel oils appear to be in good demand. Castor oil has been advanced by manufacturers £2 per ton, first pressure now being quoted £75 ex mill (barrels included).

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

There was a further fall in hides at the Bermondsey market on Thursday, best ox making 11½d-11⅝d, and dropping ½d-⅝d as compared with last week. Cows also fell ⅜d-½d, calf declining ½d-1⅛d per lb. Best lambs made 13s each, but on the four classes a drop of 3d-6d was noted. Little is doing in foreign hides, tanners feeling too unsettled in view of a possible coal strike to buy raw material far ahead. The demand for export is also flat, whilst America has not yet entered this market to any extent as a buyer of raw hides. Cables from New York describe the hide market as weak and unchanged, with best steers making nominally 28 cents.

The slight improvement in the demand for leather seems to have flickered out again, and orders have been few and far between. The little trade done has been in light bends for ladies' shoes, and in a few lower grades of bends suitable for "a boot at a price"—a feature which shows a tendency to put a low-grade boot on the market to meet the demand for "something cheaper," instead of reducing prices of first-class boots in stock. Reductions are, however, being made on export lines, some of the boots being much cheaper than are being sold at home. Upper leathers are dull and depressed, and both chrome tanners and curriers are having a bad time of it as many men are already out of employment.

Boot manufacturers are still on short time in Northampton, Leicester, and Kettering, and steps have been taken between manufacturers and employees to make the work eke out as long as possible in view of the bad outlook.

Travelling goods makers report a stagnation in trade, whilst fancy goods makers are discharging hands rather freely.

GIRARD TRUST COMPANY
PHILADELPHIA, PENNSYLVANIA.

Chartered 1836.

Equipped to perform all kinds of fiduciary service—under appointment by courts, corporations and individuals.

Correspondence invited.

Capital and Surplus - $10,000,000.

Member of Federal Reserve System.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, September 24.

Taken on the whole the markets exhibited a generally quiet appearance, demand on export account showing no signs of expansion while under the influence of adverse rates of exchange respecting the near Continent. There was more general inquiry for tea, and in the case of jute, prices were advanced sharply in face of very reserved offers from Calcutta, and crop estimates showing a depreciation of about 2½ millions of bales as compared with outturn last season.

SUGAR.—The market for free lots proved fairly active. American granulated sold, 119s; white Mauritius, 116s to 117s; crystallised West India, 95s to 101s; muscovado Jamaica, 70s to 75s; ditto Barbadoes, up to 80s. American syrup slow of sale. Good mid grocery, sellers, 45s. Honey dull.

COFFEE.—Spot goods met a quiet demand, and except for some few lots of fine East India and Jamaica, also Costa Rica, prices ruled weaker. Some mountain-grown Jamaica sold up to 151s; fine Costa, 149s. The terminal market is slow, and December delivery changed hands at 60s.

COCOA.—Dull in absence of auctions. Fine Grenada, sold, 84s.

TEA.—Improved competition ensued for all descriptions, and while common realised steady prices, all good to fine grades marked a hardening tendency. 41,600 packages Indian and 37,500 packages Ceylon were offered.

RICE.—General trade ruled quieter, but sellers asked steady prices.

SPICE.—Pepper quiet and rates barely steady. Black Singapore, spot, sold, 6¾d; October-December, 6¾d; Aleppy, spot, 7¼d; Tellicherry, 7¾d; white Singapore, spot, 1s 2½d; Muntok, ditto, 1s 3½d; ditto, October-December, 1s 1½d. Zanzibar cloves, spot, sold, 1s 8d for fair quality, and pimento, sellers, 4d. Tapioca dull. Fair flake, spot, 2½d; Penang seed pearl, spot, 25s 6d; sago flour, September-November, sold, 22s; and Farian, ditto, 30s 6d. Desiccated coconut, fine cut, spot, sold, 83s 6d; medium, 92s 6d; coarse scarce.

JUTE.—Market very active this week, and prices were driven up on crop estimates showing a reduction of about 2½ millions of bales as against last season's outturn. Native firsts assortment, old crop, actuals, September-October, sold, £54; subs, £50; new actuals, August-September, £60; ditto, September-October, £59 10s, £60 10s; October-November, £59 to £60; Daisee No. 2, actuals, October-November, £55; single marks, £56; lightning subs, old crop, September-October, £41; new actuals, £44; ditto, subs, £42; native firsts, spot, Hamburg, £55; ditto, spot, Dundee, from £52 to £54. Hessians firmer. 10-ounce, spot, sold, 55s to 56s; and 8-ounce, 42s to 43s. A twills, spot, 127s 6d; B, ditto, sold, 112s; D.W. salts, 100s.

HEMP.—Manila quiet, but firm, with few sellers. J grade, August-October, £69; K ditto, sold, £58 10s to £59; and L, £58. New Zealand steady, but trade slow. East African sisal, in auction, cleared at £4 to £5 advance.

Continued on page 495.

The TAILOR VALET Service

EASTMAN'S service offers great convenience and economy to gentlemen who wish to keep their clothes in good order and maintain a uniformly smart, well-dressed appearance all through the year, without the necessity of constantly buying new clothes.

EASTMAN & SON

(DYERS & CLEANERS) LTD.

The service consists of Removal of stains and grease spots, cleaning, doing minor repairs, shaping and pressing.

TERMS:

One Suit per week for one year, £11 15 0
" " " fortnight " " £7 10 0
" " " month " " £3 17 6

Two boxes are set apart for each customer's exclusive use, periodical calls being made from Eastman's nearest branch.

SEND FOR LIST.

OILSEEDS.—Linseed market firmer. Calcutta, afloat, quoted £41 10s; September-October, sold, £41 10s to £41; Bombay, September-October, £42 10s; Plate, afloat, Hull, £37 15s; September-October sold, £37 5s to £36 5s; January-February, new crop, £36 10s, £35 5s. Rapeseed dearer. Toria, September-October, Antwerp, £36 10s; real bold Ferozepore, £35 10s; brown Cawnpore, £33. Cottonseed quiet, but steady. London Egyptian, f.a.q., September-October, sold, £20 10s; Bombay, spot, £15; September-October, at £14 15s. Castor seed firm. Bombay, September-October, Hull, sellers, £29 10s. Gingelly steady. Chinese, afloat, to Continent, sellers, £49. Groundnuts quiet. Coromandel, August-September, £40.

METALS.—Tin, on free selling, continued an easier market until the middle of the week, cash fluctuating down to £270, and three months' to £275 10s. The downward tendency was prolonged on Thursday, cash relapsing to £268, early October to £269, while three months moved between £274 and £273 10s, being since done at £274 10s, and finally £274. At Friday's session cash registered £269 10s to £269; October dates, £270 to £272; three months, £273 10s to £274 10s; and finally at £274. English ingots, £267 to £268. Copper: The standard market declined early in the week, under realisations, both cash and forward moving down to £97. The latter position tended rather dearer at the middle of the week, small dealings being effected at £97 to £97 10s, but an improved business resulted on Thursday; values, however, being lower under realisations, cash being sold at £96 5s, and three months' at £97 10s to £97, since registered at £97 5s. At Friday's session little change occurred, end of October being sold at £96 5s, and three months' £97 10s to £97. Electros, £112 to £118; best selected, £106 to £107; strong sheets, £168. Antimony: Regulus, English ordinary to best, £52 to £55. Aluminium: Home trade, £165; export, £185 Lead easier at £34 17s 6d. Spelter firmer at £40 17s 6d to £41 17s 6d.

TALLOW.—Messrs Colchesters and Woolner write on September 22nd as follows:—The tallow market was steady during the week, and prices were mostly 1s dearer to-day. There is still a good export inquiry, but home demand for the imported article is unusually quiet for the time of year. At auction to-day 1,954 casks tallow were offered, and 1,350 were sold. Quotations are:—Australian mutton: Fine, 78s; good to fair, 77s to 74s; dull to dark, 68s to 60s 6d; hard, 77s. Australian beef: Fine, 84s; good to fair, 74s to 71s; dull to dark, 67s to 63s; sweet, 87s 3d. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 75s; and mixed, 43½, c.i.f., London, 72s. The market letter is unchanged. Town tallow, 65s per cwt. Rough fat per 8 lbs, 7½d to 1s 3½d; melted stuff, 51s per cwt. Quotations are:—Town: 62s net cash, naked, ex works. Country: Frail casks, 55s; home melted, shipping casks, net, f.o.b., good coloured, none; fair to dull, 64s to 60s. Bone fat: White, none; pale, 62s; benzine, 56s; melted stuff, 57s, f.o.b.

THE BROKEN HILL PROPRIETARY COMPANY, LIMITED.

Equitable Building,
320 Collins street, Melbourne,
22nd September, 1920.

CIRCULAR TO SHAREHOLDERS.

Your Directors have been most carefully considering the Iron and Steel position in Australia and the many developments that are taking place in the establishment of new industries in Australia based and depending upon adequate supplies of Iron and Steel. They are now convinced that the interests of the Company require that the Company should be able fully and quickly to satisfy the needs represented by the wants of Australia in this direction.

This necessitates large and extensive additions to the present plant at the Newcastle Steel Works and as a consequence it has been necessary for the Directors to formulate a financial scheme whereby these extensions, which they have decided upon, can be carried into effect. This scheme is now presented to shareholders, whose fullest interest and co-operation in carrying it out is sought by the Board.

The measure of the extension most likely to attain the best economic results, regarding both the amount of output and the cost has only been arrived at after mature consideration by the Board and long and continuous consultations with the General Manager and Chief Officers of the Company.

The chief items of expenditure involved are as follows:—

(a) A further Blast Furnace, making four in all, with the additional Coke Ovens required, together with the necessary accessories.
(b) A By-product plant to be used in conjunction with the present and the new Coke Ovens.
(c) A Duplex Steel Plant.
(d) A Continuous Mill for the production of Billets and Sheet Bars.
(e) A duplication of the present Rod Mill.
(f) A Sulphuric Acid Plant for the supply of acid in connection with the production of Sulphate of Ammonia, and also for galvanising in respect to Wire Drawing, Wire Netting, Galvanised Sheets, etc.

In addition further provision will require to be made for locomotives and railway trucks, wharfage accommodation, steam shovels and railway sidings to cope with the enlarged output.

The expenditure in these directions may be put down at about £3,500,000. To provide for this it is proposed, apart from the Company's existing resources, to raise the requisite moneys required by the issue of £1,500,000 7 per cent. Debentures to be issued at 97 per cent. on terms fully explained in the prospectus relating thereto now being published by the Company, and by an issue of shares as hereunder indicated.

The authorised capital of the Company is £3,000,000 in 3,000,000 shares of £1 each of which 2,100,000 are already issued and fully paid and 900,000 are available for further issue. It is intended to make a further issue of 420,000 (being one-fifth of 2,100,000) shares, and to offer such issue in the first instance to the members of the Company at the price of £2: 5; 0 per share and in the proportion of one share for every five shares held, but without regard to fractional interests. The terms of such offer are set out in the Notice of Issue of Shares herewith. In the case of any shares not taken in response to the offer, these, together with the shares representing fractional interests, will be disposed of by the Directors in such manner and at such time as they may consider most expedient in the interests of the Company.

It has been determined to allow shareholders the right to renounce the allotment of the whole or any of the shares for which they may be entitled to apply in favour of such person or persons as they may nominate on the terms mentioned in the Notice of Issue of Shares herewith.

The right to renounce gives to the Shareholder the right to sell or assign the right to allotment of the shares or any portion of them for which the holder is entitled to apply to some person as nominee should the holder not desire to personally take up the shares. To effect such renunciation it will be necessary for the shareholder to sign a renunciation in favour of the nominee and for any person so nominated to complete and sign an acceptance of shares and a declaration required by Commonwealth Regulations in the forms which will be forwarded with the Notices of Allotment to be sent in reply to applications by members.

The Directors have thought it desirable not to make the issue of the 420,000 shares a public issue, but to make the first offer to the shareholders or their nominees as they are confident that the scheme on these lines will be acceptable to shareholders.

It may be of interest to know that the wire drawing plant which has been established adjacent to this Company's works is already being enlarged, while the erection of Mills for the manufacture of galvanized corrugated and plain steel sheets is now well advanced and it is anticipated that operations will be started in or about October next.

A factory is also being established in the same locality for the manufacture of Wire Netting and kindred industries which Works should be in a Productive position early in 1921.

The firms concerned in the industries mentioned have entered into agreements whereby they take the whole of their steel requirements from this Company and their factories are erected upon lands either leased or purchased from the Company.

In addition negotiations are materially advancing in respect to the supply by the Company of steel for manufacture of tin plates and steel tubes.

With all these subsidiary industries progressing rapidly together with others in contemplation in conjunction with the growing demand for the Company's manufactures the necessity for increased production is obvious. It is important, therefore, that the requisite arrangements for financing by the Company of new plant to meet these demands should be made without delay.

Already considerable expenditure has been incurred in the preparation of the necessary plans and a material advance has been made in the laying down of the foundations and other necessary work in order to facilitate as far as possible the early starting up of constructional work in connection with the new plants.—By order of the Board,

F. M. DICKENSON, Secretary.

Issued by the London Office of the Company,

SEVENTY-SECOND ANNUAL REPORT OF

THE COMMERCIAL BANKING CO. OF SYDNEY, LTD.

(INCORPORATED IN NEW SOUTH WALES.)

Presented to the Shareholders at an Ordinary General Meeting held at the Head Banking House, George Street, Sydney, on Friday, 23rd July, 1920.

The Directors submit to the Shareholders a Balance-sheet showing the Liabilities and Assets of the Bank on the 30th June, 1920, and present the following Report:—

The balance at credit of Profit and Loss, after adding the amount brought forward, and deducting Interim Dividend at the rate of 10 per cent. per annum, paid on 20th January, 1920, rebate on current bills and accrued interest on fixed deposits, reducing premises account, paying Land, Income and other taxes, and providing for bad and doubtful debts, as well as granting to the Officers a bonus on their salaries, amounts to	£306,675 19 11
Out of which the Directors recommend the following appropriations:—	
To payment of a Dividend for the past half-year at the rate of 10 per cent. per annum out of the Year's Profits, £124,413 19s 8d; to Transfer to Reserve Fund, £100,000; to Balance carried forward, £82,262 0s 3d	£306,675 19 11

In terms of Article 94, the Hon. Sir Thomas Hughes, M.L.C., was appointed a Director to fill the vacancy caused by the resignation of Mr. Owen Esmond Friend, in September last.

Sir Thomas Hughes is now eligible for election, and has given notice of candidature.

This Meeting is also called upon to elect a Director, consequent on the retirement in terms of the Articles of Association of the Hon. Henry Moses, M.L.C., who is eligible for re-election, and has given the requisite notice that he is a candidate for the office.

The Directors record with very great regret the death, in January last, of Lord Plunket, and the resignation, through ill-health, of Mr Neville D. Cohen, who both were members of our London Board.

The vacancies have been filled by the appointment of Messrs Henry Samuel Howard Guinness and Lewis William George Butler, to that Board.

It rests with this Meeting to appoint Auditors for the ensuing year.

During the year branches of the Bank have been established at Adaminaby, Baradine, Gladesville, Lake Cargelligo, Mullumbimby, South Kensington, and Willoughby, in this State.

The branch at Thargomindah, in the State of Queensland, has been closed.

GEORGE J. COHEN, Chairman.

THE MONEY MARKET.

PRESSURE for money over the turn of the quarter was extremely acute, loans being called in all round the market to an extent quite unusual at this time of year. The Bank of England did not temper the wind to the shorn lamb, but rather assisted the shearing process, and the bill brokers who wanted cash found that instead of being allowed to melt bills of short currency at Bank rate with the freedom usually permitted, they had to borrow at 7½ per cent. for a week, and some who came late on the last day of September found that they had to borrow for eight days. Measures of this kind can, of course, be easily defended under present conditions, especially as the Bank has, by discounting below its official rate for those who

wanted to apply for Treasury bills, facilitated the exchange of October for December Treasuries. But they have the unfortunate effect of hitting the discount houses, especially those with small capitals, and failing to affect those who really caused the orgy of borrowing, namely, the lenders who put money with the bill brokers and then call it with a rush at the end of the quarter, relying on the Bank of England's making the necessary credit. On Thursday the rate for day-to-day money ranged up to 7½ per cent., but in the afternoon it seemed that the market had taken more than it needed. Yesterday heavy interest payments by the Government were balanced by large repayments to the Bank, and money was still quite difficult to find.

* * * *

	Oct. 1, 1920.	Sept. 24, 1920.	Sept. 17, 1920.	Sept. 10, 1920.	Previous Rate and Date Changed.

* * * *

The Bank return showed increases of £50,000 in the stock of gold and £2,005,000 in the note circulation, with a consequent decrease of £1,955,000 in the Reserve. An addition of no less than 20½ millions to the Other securities reflected the extent of the market's operations up to Wednesday, but, on the other hand, Government securities had declined by 13½ millions. Thus the deposits were 5 millions higher, more than the whole of which went to Other, Public being half-a-million lower. There was an increase of £757,000 in the circulation of currency notes, which amounts to £353,794,900, and includes £3,298,200 for notes called in but not yet cancelled. The reserve was increased by £50,000 in Bank notes, making the fiduciary issue £306,594,900, or £14,005,100 below the maximum.

* * * *

The total amounts at credit of Post Office Savings Banks and Trustee Savings Banks accounts at September 25, 1920, were £342,013,788. This compares with £341,104,250 at the corresponding period last month, and £331,925,539 a year ago.

* * * *

The following table shows Public Income and Expenditure for 12 days ended September 30, 1920 :—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	47·968	Supply Services	58·811
„ Borrowings	16·908	Interest on Debt	5·658
„ Exchequer Balances	·317	Sundries	·724
	65·193		65·193

* * * *

These operations increased debt by £16,907,724, and caused the following changes, which are reflected in our table of National Debt given in another column :—

	Mln. £		Mln. £
Treasury Bills	+ 55·177	Bank of England Advances repaid	— 31·000
Treasury Bonds	+ ·225	Public Departs. Advances repaid	— 1·327
National Savings Certificates	+ ·50	Surrenders of Bonds, &c.	— 3·607
		Depreciation Fund	— 1·160
		Other Debt reduction	— ·190
		Sundries	— 1·260
	+ 55·452		— 38·544

For the twelve days floating debt shows an increase of over £23¼ millions. Advances by Bank of England are cleared off, but Treasury bills have been increased by over £55 millions.

* * * *

Considerable business has been done in exchange, and somewhat violent fluctuations have been experienced in certain markets, notably in the case of Norway. The abandonment of the proposed loan in London lifted the Norwegian rate to 26.75 at one time last week, but on the announcement that negotiations had been successfully concluded to raise the money in New York the rate rapidly relapsed to under 25 on Tuesday, and was quoted yesterday about 24.25. The understanding that a portion of the funds borrowed in New York would be applied in payment of the ships contracted for by Norway in this country had a steadying effect on New York rate, which gradually rose from 3.48¼ on Saturday to 3.50¾ on Tuesday. In the absence of effective support this movement was not maintained, and the rate relapsed to 3.46¾ on Thursday, probably owing, in some measure, to cotton purchases on the report of frosts in the Cotton Belt. The quotation yesterday was round 3.47½. Future quotations fell back during the week to about one point per month. The Paris and Brussels rates showed less movement than of late, Paris ranging from 52.10 to 52.35, and being quoted yesterday 52.15. Paris futures remained round last week's figures. Brussels moved between 49.30 and 49.55, finishing at 49.45. Holland moved against this country, yesterday's quotation of 11.15½ comparing with 11.23 last Friday. Futures remain round spot prices. Denmark moved strongly against this country, about one kroner lower at 24.60, while Swedish currency shows a slight depreciation at 17.53. Switzerland moved fractionally in favour of this country, and was quoted yesterday at 21.70. The Spanish rate, which rose slightly early in the week, relapsed on Thursday to 23.73, and was quoted yesterday at 23.77. The Italian rate, which finished round 84.25 last week, has shown some improvements at 83.50, but remains very sensitive to every rumour regarding the labour position. The Austrian krone improved to round 760 on Wednesday, but this was not maintained, the rate yesterday being 780, while Polish marks have still further cheapened, and were quoted yesterday round 900. The Berlin rate continued to improve early in the week, and was quoted as low as 208 on Tuesday. Yesterday's quotation of 215 shows a slight improvement of 8 to 10 points on the week. Futures remain at last week's quotation. The announcement by the Indian Government of the suspension of Reverse Council drafts has had a disturbing influence on the rupee market, and unless an exportable surplus becomes apparent, it is felt that the value of the rupee must further depreciate. It must not be overlooked, however, that the Indian demand for British manufactures has fallen away, and considerable quantities of goods are held up at the various ports. Bombay T.T. rate at 1s 9¾d to 1s 10d shows a slight fall. Eastern exchanges remain at about last week's markings. Buenos Ayres rate of 57½ compares with 58 a week ago, and Rio is quoted at 12.

* * * *

EVENTS OF THE WEEK.

SEPTEMBER 25TH.—Conference between coal owners and miners opens at Board of Trade. Poles open new offensive. Death of Mr Jacob Schiff. Rioting in Belfast.

SEPTEMBER 27TH.—Coal conference at Board of Trade discusses reduction in output. Reprisals in Ireland. Bomb explosion in Cork. London tube and 'bus fares raised. General discussion on Public Finance at Brussels Conference.

SEPTEMBER 28TH.—Sale of "Reverse Councils" discontinued. Substantial Polish advance. Lord Chalmers delivers address at Brussels on financial situation of Great Britain. Barrack raid at Mallow, Co. Cork.

SEPTEMBER 29TH.—Viscount Grey puts forward proproposals for solution of Irish problem. Reprisals and incendiarism at Mallow. Coal Conference breaks down.

SEPTEMBER 30TH.—National Conference on Cost of Living. Delegate Meeting of Miners' Federation adjourned. Brussels Conference discusses International Trade.

OCTOBER 1ST.—Ministers meet coalowners and miners. Strike notices again suspended.

DIFFICULTIES AND DILEMMAS.

IF we are going to find a way through the almost inextricable tangle in which our economic life has been involved by the war and its results, certain very awkward dilemmas have to be cleared up. On the one hand, everyone shouts at the wage-earner that he must increase output if the world is to be rescued from discomfort everywhere and acute distress in many countries. On the other, the wage-earner who reads his daily paper is confronted by frequent references to trade deadlock, due to the inability of buyers to pay current prices for goods, and is only too likely to proceed to the hasty inference that to increase his output when markets are glutted is a policy that will not benefit him or his employer. This influence would be incorrect, because goods are now difficult to sell, not because they are too plentiful, but because they are too dear; an increase in their volume at a lower level of cost would sooner or later revive demand, and save us from much at least of the unemployment that is now so generally talked of as inevitable, and is a most unconvincing argument, in the eyes of the wage-earner, for increased output. High prices for coal, housing, transport, clothes, and food—things which are absolutely essential to the lives of most of us—mean that we have so much less to spend on other things, and so restrict our demand and cause unemployment. If there were more and cheaper goods, so that our money had greater buying power, we should be able in the first place to consume more, and so give employment by direct consumption, and also, what is perhaps more important and desirable, we should be able to save more, and so give still better employment by supplying industry with funds and by lending to foreign borrowers who want our goods in order to restart industry, and set the world's economic machinery at work again. So diminished output by making things dear leads to unemployment and distress. Some very interesting remarks on this subject were made by Sir Charles Mandleberg in an interview published in the *Times* of September 29th. "If," he said, "an article costs £1 where a man is putting in a fair amount of work, it would cost 25s if he only put in three-quarters of the amount of work. Add to that the overhead costs, and you get anywhere from 33⅓ per cent. to 50 per cent. increase in cost of manufacture." Even more striking and important was Sir Charles' suggestion that in order to relieve the wage-earner's fear that increased output will produce unemployment, an attempt should be made by a meeting of employers and employed to arrive at a scheme "to guarantee at least a living wage to workpeople who are regularly on the staff, in case of there being a shortage of work." Much of the bitterness and suspicion of the wage-earners is due to their feeling that under present conditions their earning power is at the mercy of trade fluctuations which are beyond their control. This is, of course, also more or less true of all of us who work for our living; but there is a great difference in the more and less; and if industry can secure the position of those who are thrown out of work through no fault of their own it will have worked a great reform which may have far-reaching effects. It is all to the good that leading employers should at a time of much industrial friction recognise that a real improvement in the workers' lot is the right way to avoid it. Mr Nugent, Director of the Federation of British Industries, who also discussed the industrial position in the *Times* of the previous day, stated, in calling attention to the present high cost of production, that "nobody wishes to lower the standard of living and labour." If Labour could be made to believe that this was true of all employers the industrial outlook would very quickly brighten. It is very right and necessary to call on the wage-earner for a fair day's work for a fair day's pay, but he has to be satisfied that the fair day's pay will not be denied him if he earns it. He has, and rightly, no use for economic reconstruction that threatens anything like a return to his pre-war standard.

Our bankers also are faced with a very difficult dilemma. They are told to restrict credit so that prices may be lowered, and it is undoubtedly true that prices cannot be lowered if credit continues to expand. But it is argued by bankers that if they restrict credit to the point of checking manufacturing enterprise, the output of goods will be lessened, there will be failures and general distress, production will be reduced more rapidly than credit, and prices will consequently rise. The advocates of the dear money policy seem to think that they can squeeze out the merchant who is holding up goods without hitting or hurting the producer. Lord Cullen put this aspect of the case to the Brussels Conference lately, in opposition to Dr Vissering, who had said that "an increase in the Bank rate would not touch the heart of the problem, especially as it would unfavourably affect production." Lord Cullen argued that "adequate money

rates were the only way to accomplish deflation..... Money rates formed a comparatively negligible proportion of the cost of production, but the bulk of the cost of carrying stock." This is certainly true, but the banker's dilemma consists in the extraordinary delicacy of procedure required in order to bring prices down without checking the production to such an extent that they will go up again. Even if only those who are carrying stocks are affected directly, falling prices along with high cost of production, due to high taxes, slack output, and high money rates, are not a combination calculated to stimulate the producer's enthusiasm. Bankers naturally feel that too rapid deflation, accompanied by a headlong fall in prices and perhaps a crop of failures, is not a wholesome remedy for our present evils. What has to be made clear to the producer is that prices must come down, but gently; the margin of profit that he has lately enjoyed has to be modified, but if he is threatened with heavy loss in working he will work, if at all, on the lowest possible output.

There seems to be all the less need for heroic monetary measures, because the outlook for industry is quite difficult enough without them. We give on other pages the India Council's announcement that it has ceased to offer sterling drafts in India, and some interesting correspondence on the subject. This measure, though it is now stated that the Indian Government will permit the export of 500,000 tons of wheat, can only tend to accentuate the weakness of the Indian exchange, and so to make the sale in India of British goods more difficult. And it was difficult enough before, and the credit restrictions lately imposed by the Eastern banks complicate still further the problem of the home banks. For different reasons—adverse exchanges, too favourable exchanges, lack of buying power, or glutted markets—sales, are difficult in the United States, Japan, Canada, most of the European countries, and elsewhere, while the home market is far from receptive. Under such circumstances the cut in prices, without which demand cannot be restored, seems likely to be enforced on the producer, unless his position is made so difficult that he prefers to stop production.

It is a most difficult position calling for cautious handling of our credit machinery. We want a fall in prices, but it must not be too rapid. We want real peace established and the German indemnity fixed. We want the Treasury bill problem dealt with, so that the Bank of England may no longer think it necessary, as we lately recorded, to threaten those who propose to lend money to foreigners with a rise in Bank rate. Lord Chalmers told the Brussels Conference this week that "the British investment market is open to all comers." Norway's representatives must have been amused. Norway has consoled herself in New York, as we show elsewhere, and the revival of the demand in the United States for European securities is one of the few favourable features in the general outlook. But Mr Boyden, the unofficial American representative, made it clear to the Brussels Conference on Wednesday that the United States will only help Europe freely with capital when Europe is a fair business risk. "The victors must meet the vanquished; a firm peace must be made, and a real union."*

THE QUARTER'S NEW CAPITAL.

A SLACKENING in the output of prospectuses was only to be expected during the summer months, for apart from holiday influences, the pressure in the new capital market in the first half-year, and especially during the first three months, was too heavy to last. Our statistics for the past quarter show new capital applications amounting to £61 millions, as compared with £98 millions in the second quarter and £135 millions in the first quarter. British Government borrowings are included with the exception of Treasury bills and Ways and Means advances, but the effect on this year's figures is small in comparison with recent years. In the first nine months of 1919 British Government loans accounted for no less than £797½ millions out of a total of £903½ millions. For the corresponding period of this year the figure is only £22 millions out of a total of £294 millions. The quarterly figures since 1904 are shown below :—

Daily Chronicle, September 30th.

New Capital Applications.

Year.	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.	Total for Whole Year.
	£	£	£	£	£
1904.....	19,905,000	50,654,000	9,547,000	42,913,000	123,019,000
1905.....	67,301,200	36,915,500	22,854,100	40,116,600	167,187,400
1906.....	30,264,800	55,059,800	10,835,800	24,012,800	120,173,200
1907.....	49,428,600	40,304,600	15,631,400	18,265,400	123,630,000
1908.....	45,287,900	64,385,600	31,541,800	50,988,400	192,203,700
1909.....	64,238,400	56,835,200	27,694,400	33,588,800	182,356,800

1911.....	61,245,000	56,238,800	14,914,500	59,361,100	191,759,400
1912.....	47,966,100	62,377,500	40,687,100	59,819,300	210,850,000
1913.....	50,344,700	70,014,900	29,961,800	46,216,000	196,537,000
1914.....	97,610,200	54,739,100	20,265,200	339,908,100	512,522,600
1915.....	46,313,500	25,693,200	586,772,500	26,462,500	685,241,700
1916.....	156,251,200	131,022,500	111,578,000	186,584,700	585,436,400
1917.....	825,925,200	221,254,300	57,054,400	214,362,100	1,318,596,000
1918.....	475,258,700	220,921,500	329,674,000	367,527,200	1,393,381,400
1919.....	291,901,400	93,879,000	536,502,200	113,776,800	1,036,059,400
1920.....	135,094,500	98,011,700	61,195,600	..	..

Making allowance for the present value of money, the past quarter's figures do not seem very high when compared with the pre-war years—for example, 1912. But on the other hand, in the light of the next table, which analyses the geographical distribution of the new capital raised, it will be seen that the amounts have increased enormously, in that a very insignificant amount has gone abroad during the past nine months, whereas more than half the total raised in the first nine months of 1912 was destined for foreign countries :—

DESTINATION OF NEW CAPITAL.

	First Nine Months.			
	1911.	1912.	1913.	1920.
	£	£	£	£
United Kingdom	22,104,300	36,533,400	25,595,200	264,582,900
British Possessions	39,433,500	35,501,800	56,948,000	25,002,600
Foreign countries	70,860,500	78,995,500	67,778,200	4,716,300
Total	132,398,300	151,030,700	150,321,400	294,301,800

Thus the total required for domestic purposes has expanded more than tenfold in comparison with 1913.

An analysis of the purposes to which the new capital was applied gives the following results :—

Description.	First Half-year, 1920.	Third Quarter, 1920.	Total Nine Months to September 30.	
			1919.	1920.

Hotels, theatres, and entertainments	4,857,000	510,000	2,394,700	5,367,000
Patents and proprietary articles	745,000	323,200	1,123,500	1,068,200
Docks, harbours, and shippi g	17,679,000	140,000	3,082,500	17,819,000
Banks and insurance	15,508,600	167,800	18,776,300	15,676,400
Miscellaneous	37,772,900	10,177,100	26,533,000	47,950,000
	233,106,200	61,195,600	903,538,300	294,301,800

The British Government borrowings include net receipts from National Savings Certificates, £1,650,000 in the past quarter, and 5-15-year Treasury bonds, which are applied in reduction of floating debt, £3,214,000. There were no Colonial Government loans in the three months, but British Corporations have been active. The Corporations of London and the London County Council have each been in the field with Housing loans, while the quadruple and quintuple corporation loans in July and September account for the balance. In the industrial section the largest issues have been Dunlop's £4,500,000 ordinary shares, issued to shareholders only, last month; Harrod's £1,800,000 7½ per cent. preference shares in July; the

Shell issue of £6,443,721 ordinary shares to shareholders at par in August; Armstrong, Whitworth 6½ per cent. debentures, £1,900,000, and Vickers 7 per cent. seven-year notes, £1,425,000, in July; and the African and Eastern Trade Corporation's issue of ordinary, £1,845,000, and preference shares, £820,000, in August.

JUTE TRADE PROSPECTS.

THE report that a combine is being formed in the Dundee jute trade by London financial interests which carried out a similar operation in the glass trade, suggests an inquiry whether success is likely to be achieved. In the glass industry conditions were such that some good fortune was bound to be met with. Foreign competitors were belligerents in the great war, and from them competition was not to be expected for some time. In the jute trade the factors are entirely different. The powerful oversea competitor is in this case India, and India's productive power has not been damaged by the war. Her competition should be as efficient now as before the war, and even before the struggle it had left a decided mark on the British jute trade. Naturally, the tremendous war demand enabled some of the Dundee companies to flourish greatly, and the handsome amounts that have doubtless been devoted to depreciation and reserves should have placed the industry in an extremely favourable position for taking advantage of the worldwide demand that now exists for peace purposes, and is likely to continue for some time to come.

Of course, this is not the first time that the trade has benefited from war conditions. The American Civil War gave it its first important "lift," in the 'sixties of last century, and afterwards there came the Franco-German struggle, which served to double our exports of jute goods. From that time the trade continued to prosper on peace-time demands until the early 'nineties, when it reached the zenith of its prosperity, as will be seen in the following :—

OVERSEA TRADE in JUTE MANUFACTURES (Not Including Yarns).

5 Years' Average.	Exports.			Net Imports. (b)	Excess of Exports.
	Piece Goods.	Other Goods(a)	Total (a)		
	Million Yards.	Thous. £	Thous. £	Thous. £	Thous. £	Thous. £
1864–68	23.7	439	..	..	..	..
1869–73	68.9	1,127	..	..	..	..
1874–78	114.9	1,556	..	..	..	..
1879–83	198.3	2,295	..	..	..	..
1884–88	229.5	2,062	..	..	..	..
1889–93	270.7	2,561	..	..	..	..
1894–98	238.0	2,077	61	2,138	..	..
1899–1903	201.9	1,974	74	2,048	372	1,676
1904–08	177.4	2,234	115	2,349	529	1,820
1909–13	169.8	2,344	203	2,547	914	1,633

(a) Exports do not include bags and sacks.
(b) Imports include bags and sacks.

In the early 'nineties, it will be noted, exports of piece goods exceeded 270 million yards a year, valued at more than 2½ millions sterling. The quantitative figures have never been reached since, though there are reasons for believing that the quality of goods exported steadily improved, until in 1913 the 173½ million yards shipped were worth over 3 millions sterling.

When all allowance is made for this betterment in quality, however, it cannot be said that the trade did well during the quarter of a century ending with 1913. Exports, on quinquennial averages, showed no increase in value, while net imports (retained for home use) grew steadily larger. The reason is not far to seek. Indian competition was responsible for the stagnant exports and growing imports. In the early 'nineties India's exports of jute piece goods ("gunny cloth") were only some 30 million yards, but in 1900 they were 365 million yards, in 1905 658 million yards, and in 1913 no less than 1,022 million yards, worth 10½ millions sterling. These enormous exports consisted of very low-grade goods, their average value in 1913 being little more than 2½d per yard, while British exports in that year were worth 4¼d per yard. Our Indian fellow-subjects had, in fact, succeeded in virtually monopolising business in the cheapest wares, leaving us to do the better-class trade.

Moreover, India's huge exports of jute goods go to much the same group of markets as do ours, and the following may be given as an illustration of the effect this has had on the British trade :—

EXPORTS of JUTE PIECE GOODS.
(In Thousand £'s.)

	From India.		From U.K.	
	1890.	1913.	1890.	1913.
To U.S.A.	134	6,816	1,337	1,572
To Argentina..	..	1,848	248	275
	134	8,664	1,585	1,847

It is not to be wondered at that our shipments to these markets remained virtually stationary, seeing that Indian shipments to the two countries grew from less than ¼ to more than 8½ millions sterling. The wonder rather is that our trade with those countries has kept up so well. Indeed, it is only the *value* that has kept up, the quantity of our consignments to the States having dropped from 152 million yards in 1890 to 90 million yards in 1913, while the quantity sent to Argentina fell from 26 million yards in 1890 to less than 13 million yards in 1913. But, as already stated, the *quality* of the goods sold had greatly altered for the better between the two dates.

Whether Dundee will be able to maintain its hold over the trade in higher-grade goods remains to be seen, but the records since the war are not without promise : —

THE JUTE TRADE SINCE the WAR.

	Exports.			Net Imports. (b)	Excess of	
	Piece Goods.		Other Goods(a)	Total.(a)		
	Million Yards.	Thous. £	Thous. £	Thous. £	Thous. £	Thous. £	Thous. £

(a) Exports do not include bags and sacks.
(b) Imports include bags and sacks.

During the war the need for immense quantities of jute goods was quite beyond the power of Dundee to supply, and imports from India were greatly swollen. But since the return of peace more normal conditions have been established, and it seems problematical whether Dundee can reassume its pre-war position in the oversea trade. Before the war exports were, roughly, three times as large as net imports. That proportion has never been achieved since, though for the first eight months of 1920 exports were at the rate of 11½ millions, and net imports at the rate of 5¼ millions a year, including sacks in both cases.

FOREIGN TRADE OF CEYLON.

CEYLON, the "pear-shaped jewel of Hindustan," lies some 60 miles to the south-east of India. Its pearl fisheries were once the most famous in the world, and at the present time it supplies the United Kingdom with about half as much tea as we receive from India, and twice as much as we obtain from the rest of the world, whilst more than three-fourths of our supply of cinnamon are obtained from this fertile island.

Within ten years of the Portuguese under Da Gama landing at Calicut, on the Malabar coast (May 20, 1498), they had set up factories on the west and south of Ceylon. Pearls, sapphires, topazes, and cinnamon were chief among the products that they brought back to Europe. In 1638 the Dutch began to oust the Portuguese from Ceylon, and 20 years later they captured Jafnapatam, the last stronghold of the Portuguese. The island then became one of the most important Dutch possessions in the East, with garrisons at Colombo, Point de Galle, Negomba, Manaar, and Jafnapatam. In 1795-96 the British dispossessed the Dutch and annexed Ceylon to the Presidency of Madras, but in 1801 it was constituted a separate Crown colony. In 1815 the last of the Kandyan kings, who had reigned in the interior of the island, was captured, and British rule pre-

vailed throughout its length and breadth. With an area about equal to that of Holland and Belgium combined, and a population of about four millions, its total foreign trade in 1913 was valued at £28,967,000, the imports being valued at £13,309,000, and the exports at £15,658,000. The value of the total trade with the United Kingdom in 1913 was £10,921,000 (much more than one-third of the island's total foreign trade), consisting of £3,880,000 worth of imports from the United Kingdom, and of £7,041,000 worth of exports. In the following table is shown the great increase in the value of the trade of the island between 1907 and 1912 compared with that between 1901 and 1906 :—

Value of Imports in £'000's by Ceylon.				Value of Exports in £'000's from Ceylon.			
1901	7,508	1907	8,621	1901	5,994	1907	8,638
1902	7,298	1908	8,696	1902	6,627	1908	8,678
1903	7,751	1909	8,919	1903	7,251	1909	9,801
1904	7,766	1910	10,901	1904	6,951	1910	11,105
1905	7,682	1911	10,960	1905	6,833	1911	12,135
1906	8,234	1912	12,133	1906	7,501	1912	13,264
Average ..	7,707	Average ..	10,037	Average ..	6 859	Average ..	10,603
An increase in the latter period of £2,330,000, or 30·2 per cent.				An increase in the latter period of £3,744,000, or 54·5 per cent.			

In 1913 the value of the imports rose to £13,309,000, and that of the exports to £15,658,000. The percentage increase in the average annual value of the imports from 1907 to 1912 was 30.2, being equal to the percentage increase in the value of the imports by Egypt. The percentage increase in the value of Ceylon's exports in the latter period is seen to have been 54.5, whilst that of Egypt was 40. The corresponding increase in the values of Ceylon's imports (1) from all British Possessions (excluding the United Kingdom) was £1,235,000, or 25 per cent., and (ii.) from foreign countries was £439,000 only, which increase was, however, 55 per cent. The increase in the values of Ceylon's exports to all British possessions was only £234,000, or 17.3 per cent., and to all foreign countries was £1,884,000, or 95.6 per cent. In the next table are shown the chief sources whence Ceylon drew her oversea supplies :—

Imports by Ceylon from	Value of Imports in 1913.	Average Annual Values.		Increase in Latter Period.	
		1901 to 1906.	1907 to 1912.	Actual.	Per Cent.
	£	£	£	£	
United Kingdom	3,880,000	1,974,000	2,629,000	655,000	33·2
India	6,124,000	4,362,000	4,971,000	609,000	14·0
Straits Settlements	759,000	82,000	579,000	497,000	606·1
Germany	401,000	150,000	267,000	117,000	78·0
Japan	274,000	95,000	138,000	43,000	45·3
Australia	251,000	289,000	314,000	25,000	8·6
Java	218,000	7,000	110,000	103,000	1,471·0
Maldive Islands	147,000	123,000	148,000	25,000	20·3
Belgium	115,000	27,000	60,000	33,000	122·2

The trade with India is naturally the dominant feature in the table, but the value of the imports from the United Kingdom is increasing very rapidly, the actual increase in the average annual value (£655,000) of imports already exceeding the actual increase in the value of the imports from India. With the introduction of fresh capital and of more trained managers and overseers for the development of fresh areas in Ceylon, a great increase in trade with the United Kingdom in the shape of railway material and machinery may be confidently hoped for. That the island is ready for increased imports is shown by the enormous percentage of the increases shown in the case of Java and the Straits Settlements. Belgium and Japan will also prove persistent rivals in their attempts to supply the island with manufactures.

In the next table are shown the chief customers for Ceylon's exports :—

Exports from Ceylon to	Value of Exports in 1913.	Average Annual Values.		Increase in latter period.	
		1901 to 1906	1907 to 1912.	Actual.	%
	£	£	£	£	
United Kingdom	7,041,000	3,536,000	5,163,000	1,627,000	46·0
United States	2,580,000	575,000	1,375,000	800,000	139·1
Germany	1,517.000	472,000	797,000	325,000	68·8
Russia	905,000	331,000	717,000	386,000	116·6
Australia	775,000	465,000	596,000	131,000	28·2
Belgium	734,000	161,000	317,000	156,000	97·0
India	605,000	550,000	470,000	— 80,000	..
China	256,000	94,000	194,000	100,000	106·4
Canada	252,000	139,000	229,000	90,000	64·7
New Zealand	167,000	91,000	141,000	50,000	55·0

Notwithstanding the very great percentage increases in the average annual values of the exports to the United States, Germany, Russia, Belgium, and China, it is seen that the actual increase in the value of the exports to the United Kingdom was about equal to the combined increases in the values of the exports to those countries. Ceylon's exports consist mainly of tea, rubber, the products of the coconut palm, plumbago, areca nuts, cocoa, cinnamon, and citronella oil (used for scenting soap), and their values in 1913 are shown in the next table, which also shows the values of her chief imports :—

Imports by Ceylon in 1913.		Exports from Ceylon in 1913.	
	£		£
Rice	3,351,600	Tea	5,852,600
Coal and Coke	993,300	Rubber	4,452,400
Cotton Manufactures	852,600	Copra	1,397,300
Manures	493,800	Oil, coconut	1,115,800
Sugar	361,900	Plumbago	603,100
Grain, other than rice	326,900	Coconuts, desiccated	524,400
Cutlery and hardware	306,800	Coir, manufactures of	222,900
Machinery and millwork	293,700	Areca nuts	202,600
Tea chests	167,600	Cocoa	201,100
Iron: Galvanised wire, &c.	167,600	Cinnamon	160,900
Haberdashery	161,700	Oil, citronella	110,200
Curry stuffs	153,300	Coconuts	92,800
Fish, cured or salted	148,800	Poonac	72,900

Six of the exports shown in the table are products of the palm *Cocos nucifera*, which grows in most tropical lands, especially near the sea. *Copra* is the dried kernel from which the oil has been expressed. *Coir* is the fibre from the husk of the coconut. *Poonac* is the refuse left after pressing out the oil from the kernel, and is used for feeding cattle, and as manure. The total value of the coconuts and their products shown in the table amounts to £3,426,100, and thus ranks the products of the coconut palm as third only to tea and rubber among Ceylon's exports. The cocoa, or cacao, grown in Ceylon and in tropical America and the Gold Coast, is the fruit (seeds) of *Theobroma cacao*, a tree quite distinct from the coconut palm. The following table shows the value of our trade with Ceylon during the last seven years (1913 to 1919) :—

	Imports by U.K.	Exports of U.K. Produce and Manufactures.	Exports of Foreign and Colonial Merchandise.	Total Exports from U.K.	Value of Total Trade with Ceylon.
	£	£	£	£	£
1913	7,797,000	4,185,000	131,000	4,316,000	12,113,000
1914	8,085,000	2,850,000	116,000	2,966,000	11,050,000
1915	12,197,000	1,956,000	113,000	2,069,000	14,267,000
1916	10,730,000	2,746,000	150,000	2,896,000	13,626,000
1917	10,189,000	2,101,000	57,000	2,158,000	12,347,000
1918	11,549,000	1,950,000	21,000	1,971,000	13,520,000
1919	17,268,000	2,466,000	51,000	2,517,000	19,784,000

It will be seen from the table that whereas the imports by the United Kingdom rose in value from £7,797,000 in 1913 to £17,268,000 in 1919, an increase of £9,471,000, or 121.3 per cent., the exports of United Kingdom produce and manufactures fell from £4,185,000 in 1913 to £2,466,000 in 1919, a decrease of £1,719,000, or 41.1 per cent., and our exports of foreign and colonial merchandise fell from £131,000 in 1913 to £51,000 in 1919, a decrease of £80,000, or 61 per cent. But owing to the great increase in the value of our imports, the value of our total trade rose from £12,113,000 in 1913 to £19,784,000 in 1919, an increase of £7,671,000, or over 63 per cent. The two imports which account for this great increase were tea and rubber. Tea rose in value from £4,179,462 (quantity imported being 110,936,000 lbs) in 1913 to £9,556,091 (quantity imported rising to 144,707,000 lbs) in 1919. The value of our imports of rubber rose in the same period from £2,309,324 to £3,605,033. The value of our imports of raw cocoa, of which Ceylon grows some of the best in the world, fell from £164,661 to £79,294. Both the rubber plantations and those of cocoa will probably show a great development in the near future.

Business Notes.

Half-Year's Revenue.—Revenue for the half-year ended September 30, 1920, amounted to £619,299,498, as compared with £458,998,799 in the corresponding period of 1919. This is a net increase of £160,300,699. Customs show a decrease of £4,046,000, while Excise records a gain of £37,621,000. Property and income-tax at £126,335,000 is an increase of £16,818,000, but Excess Profits Duties, &c., are £20,487,000 lower. Under "Miscellaneous" a gain of £115,367,628 is recorded. Receipts from Customs are apparently not up to original estimation, having been put down for an increase of

£640,000 on the year. Expenditure amounts to £541,671,530, as compared with a total estimated expenditure of £1,176,053,000 for the year. On the whole, the figures are satisfactory.

Cotton Trade Short Time.—Our Manchester correspondent writes :—This week the Federation of Master Cotton Spinners' Associations has given further consideration to the state of trade, and on Tuesday last the Emergency Committee received reports from the several districts in Lancashire. After discussion it was officially announced that, in the opinion of the Committee, curtailment of yarn production, both in the American and Egyptian sections of the industry, was desirable. It was decided, however, that a ballot of the members on the question should be deferred, pending a joint conference between representatives of the Federation and the operatives' organisations. It is anticipated that some mutually agreed upon scheme will be arranged, and it is probable that the trade will decide to recommend all mills to work 35 hours a week instead of 48 for a period of two or three months. The irregular dispute which has resulted in nearly 200 mills in Oldham being idle for three weeks is now drawing to a close. The employers have decided to reopen the factories next Tuesday morning, and allow the operatives to return on the terms of the recent agreement on the creeler question. Although trade is very depressed at the present time, certain companies continue to announce big dividends. Numerous stocktaking results have been reported during the last few days, and it is of interest to mention that out of 31 companies, 13 are paying a dividend of 20 per cent. per annum, four 25 per cent. per annum, one 60 per cent. per annum, two 66 per cent. per annum, and one 158 per cent. per annum. Smaller distributions are being made by ten concerns varying from 10 to 16 per cent. per annum. It is probable that at the end of this year the dividends for shareholders will be less satisfactory.

Indian Exchange.—The following announcement has been made in India :—The Government of India have been in continuous communication during the past few months with the Secretary of State on the subject of the sale of reverse Council bills. Since February 1st the note circulation has been reduced from 185 crores to 158 crores on September 15th, and this material contraction of currency has to a large extent been rendered possible by the maintenance of the weekly offer to sell sterling drafts on London. The effect which might have been anticipated on the exchange value of the rupee by reason of the withdrawal of this substantial amount of currency has, however, been obscured by various causes, including the stagnation in the export trade and the abnormal activity in the imports into India of foreign goods. An opportunity for reconsidering the whole question has presented itself on the passing into law at the recent session of the Legislative Council of the Indian Coinage Act, rating the sovereign at Rs. 10, and the Government of India have accordingly, with the approval of the Secretary of State, decided after the sale of September 28th to withdraw for the present, and until further notice, the present weekly offer of sterling drafts on London. The Government of India, however, reserve to themselves the right of resuming these sales should circumstances in their opinion at any time subsequently render such resumption expedient.

Norway's Loan in America.—The National City Company has this week published particulars of the 20 million dollar loan which is being raised by the Kingdom of Norway in New York. The loan is described as an external gold 8 per cent. loan, and is repayable on October 1, 1940. Principal and interest are payable in United States gold coin, interest being free from all Norwegian taxes, present or future. A sinking fund of $1,000,000 per annum will be used to purchase bonds in the open market up to 110 per cent. and interest, during the first ten years, all unexpended balances of this fund being used to draw bonds by lot at 110 per cent. After April 1, 1931, all sinking fund payments ($250,000 quarterly) will be applied to draw bonds by lot at 107½ and interest. The small balance of the loan outstanding October 1, 1940, will be repayable at par. The bonds are not subject to United States income-tax for those who are neither citizens of nor domiciled in the United States.

HARRISONS & CROSFIELD, LTD.

With Branches throughout the East.

Port of London.—The report of the Port of London Authority for the year ended March 31st last shows a strong revival in the trade of the Port. The total net tonnage of vessels arriving and leaving the port amounted in 1919 to 26,335,191 tons, as compared with 14,564,008 tons in 1918, 18,053,002 in 1917, and 40,082,282 tons in 1913. The net register and deck cargo tonnage of shipping increased by 7,688,975 tons, of which 5,554,467 tons were in the foreign and 2,134,508 in the coastwise trades. The financial results for the year ended March 31st compare with those of previous years as follows :—

For Year Ending March 31.

	1914.	1916.	1917.	1918.	1919.	1920.
	£	£	£	£	£	£
Total revenue	3,434,453	4,570,313	4,567,426	4,407,846	5,723,690	8,305,801
Total expenditure ..	2,217,822	2,859,737	2,786,946	2,910,599	3,532,604	5,531,726
Balance of rev.....	1,216,631	1,710,576	1,780,480	1,497,247	2,191,086	2,774,075
Fixed charges	932,786	1,132,005	1,159,140	1,226,917	1,264,567	1,600,323
Surplus revenue	283,845	578,571	621,340	270,330	926,519	1,173,752
Brought forward	89,637	187,808	232,059	340,465	341,953	349,384
	373,482	766,379	853,399	610,795	1,268,472	1,523,136
Written off, &c.	281,578	534,320	512,934	268,842	919,088	1,139,789
Carried forward	91,904	232,059	340,465	341,953	349,384	383,347

The amounts written off include £1,089,789 for "provision to meet expenditure on maintenance, dredging, &c., postponed in consequence of the war," and £50,000 transferred to general reserve, which now amounts to £802,553, interest on investments, amounting to £27,492, having also been added during the year. Fixed charges, including contributions to pension fund, have increased by £336,000. Port stock issued amounts to £28,090,459, out of an authorised total of £32,647,156. The table below shows that while Liverpool still leads as regards the values of total imports and exports (excluding coastwise goods) London is making a rapid recovery :—

	1917.	1918.	1919.	Inc. in 1919.
	£	£	£	%
London (including Queenborough)..	505,800,525 ..	541,909,302 ..	819,875,330 ..	51·3
Liverpool.....	596,977,551 ..	682,997,302 ..	827,986,112 ..	21·2
Hull.....	83,660,761 ..	90,398,722 ..	148,023,115 ..	63·7
Manchester (incl. Runcorn)	88,605,955 ..	107,082,759 ..	146,890,745 ..	37·2
Southampton	24,319,880 ..	39,715,812 ..	41,046,404 ..	3·4
Glasgow	77,053,626 ..	96,536,848 ..	110,248,762 ..	14·2

During the 12 months ended March 31st last the Authority landed or received 2,699,181 tons of import goods for warehousing or for immediate delivery, an increase of 19.8 per cent., as compared with the tonnage dealt with during the previous 12 months.

The Trade of South Africa.—The Department of Overseas Trade is to be congratulated on the admirable series of reports on trade and economic conditions in many important countries which have been appearing during the past few months. These reports are written by the Trade Commissioners in the various overseas dominions and by the Commercial Secretaries at Foreign Legations. The department point out that the views expressed in these

reports are those of the writers, "and are not necessarily in all respects the views of the department." Two more reports have just recently appeared. Capt. C. H. Courthope-Munroe, Commercial Secretary to the British High Commission at Constantinople, in a general report on the Trade and Economic Conditions of Turkey for the year 1919 (Cmd. 942, 2s), supplies a vast amount of information in a volume running to 191 pages, which will be found invaluable by merchants and traders specialising in the markets of the Near East. The second report is by Mr W. G. Wickham, Senior Trade Commissioner in South Africa, on the Trade of the Union for the year 1919 (Cmd. 956, 6d). Perhaps we may suggest that the value of the information supplied in these reports is not enhanced by the long period of time which is allowed to elapse before publication. Mr Wickham points out that the year 1919 was one of disappointment as far as South African trade is concerned. "Every forecast has been upset, every estimate of manufacturers as to the time which would be required for re-equipping and re-organising works has been wrong, and consequently the end of 1919 sees this market still waiting, as it was a year earlier, for British goods to arrive." Having been accustomed for years to adjusting all foreign trade accounts through London on what amounted practically to a system of ignoring exchange rates and balance of trade—the banks making a small charge and negotiating all bills virtually at par—South Africa suddenly found that London could not any longer protect her from the effects of the chaos afflicting world trade. Having no organisation or mechanism for negotiating direct with her customers, South Africa was unable, by shipping gold to America, India, Australia, and other creditor countries, or even by balancing exports against imports, to obtain anything approaching a par of exchange. Trade in consequence has been severely hampered. A large amount of speculative investment has not been accompanied by any really notable expansion of industry and production, capital having been more readily found for the former than for the latter. The most important feature affecting commerce and industry was, of course, gold. The year opened with pessimistic forebodings as to the necessity of closing down 20 or more large mines. The establishment of the premiums in the middle of the year obviated the danger, and has had an important effect on the general commercial situation of the country. "The South Africa note issue is still convertible, and backed by gold. Native labour on the mines continues to obtain payment of wages in gold, and it has in practice been found impossible to stop the considerable leakage of gold through this channel to the homes of the natives, and then abroad, particularly to India." A feature of the trade statistics is the loss of trade by the United Kingdom, and the gain by the United States in almost all directions. The share of the total import trade (excluding specie and Government stores) obtained by the United Kingdom, namely, £21,200,000, is less by £4,500,000 than in the previous year. The percentage is 45.46, against an average for the previous six years of nearly 56 per cent., considerably less, in fact, than in the war years, and equally less than in pre-war years, when Germany was in active competition. Imports from America were valued at £11,250,000, as against a previous highest aggregate of £6,500,000. The percentage of the whole has reached 24.14, as against 13.87 in 1918, 17.92 in 1917, and 9.52 in 1913. The figures show no sign of a revival of German and Austrian competition; Belgian exports amount only to a few thousand pounds, and Japan has lost rather than gained ground. Exports show an enormous increase in total value, the greater part of which, however, is accounted for by higher prices and not by increased quantity.

Restriction of Tea Output.—The Indian Tea Association (London) states that approximately 80 per cent. of London-controlled concerns are prepared to agree, conditionally on there being general support, to a system for restricting the production of tea. The matter was further discussed at a meeting of the general committee, held on Monday, the 27th ult., and, as it was impossible to obtain unanimity regarding the present year's crop, the following resolution was carried unanimously:—"That the committee recommend that the crop for this year be restricted to not more than 90 per cent. of the average crops produced in the years 1915 to 1919, or, as an alternative, that proprietors should cease plucking on November 15, 1920. Further, that the crop for 1921 be limited to not more than 80 per cent. of the average crops produced in the five years 1915 to 1919 inclusive, provided that the proposed reduction for the year 1921 is supported by at least 85 per cent. of the industry." A cable has been despatched to the Indian Tea Association, Calcutta, advising them of the action taken on this side, and asking that the support of members there be obtained forthwith. It is understood that the Ceylon Association in London have passed a resolution recommending all proprietors to take steps at once to reduce their production, and are ascertaining what support is likely to be given to a reduction of 20 per cent. in the Ceylon crop of 1921.

Armstrong, Whitworth.—The directors of Sir W. G Armstrong, Whitworth and Co., Limited, have this week submitted a statement of accounts for the four years ended December 31, 1919. Net profits for these four years are shown as £4,053,605. For writing down capital expenditure £1,000,000 is taken, and preference and ordinary dividends absorb £2,465,093. A balance of £1,049,899 is carried forward to next year's accounts. The report states that "owing to the extent and complexity of the work undertaken during the war, it has been impossible to separate the accounts, and the four years ending December 31, 1919, are therefore submitted as one period. Settlements with different Government Departments and with the Inland Revenue are now sufficiently advanced to enable us to present the accounts." Total assets now amount to £28,062,205, and presumably include interests in Siddeley Deasy Motor Car Company, Limited, the Pearson and Knowles Coal and Iron Company, Limited, Armstrongs and Main, Limited, and Crompton and Company, Limited. The total share capital is now £10,012,500, exclusive of existing debenture stock for £2,500,000. General reserve is £1,400,000, and there is a share premium account of £516,000. A noteworthy item is employees' deposits amounting to £486,691. It is stated that the reorganisation of the works for peace industries is now complete, and "much commercial work has been undertaken."

The Outlook in Guatemala.—Don Carlos Herrera has now been duly inducted into his office of President of Guatemala for the next four years, and business circles welcome his rule. He has had official experience as Minister of Public Works (in 1886) and in public finance. He and his advisers are men of high standing and commercial probity, supported by the best elements in the country, and with a large stake in its prosperity, and the interests of foreign investors are regarded as safe in their hands. Ex-President Estrada Cabrera remains in prison, for his own safety; but it seems probable that he will end his career in exile. The country depends mainly on its coffee, which is of the highest quality, but has not yet recovered its markets in Europe; but sugar and fruit are also important exports, and it is stated that the new Government will seek to develop the revenue. Mining would prosper if the communications of the country were better, and it is stated officially that the new President is desirous of improving them by the construction of new roads, while giving special attention also to railways, telegraphs, and telephones. The interest on the debt has been paid with regularity since the diplomatic pressure exerted in 1913 by the British Foreign Office, and we may fairly expect that the new Government will take steps to pay the arrears of interest, and to keep up the remittances on account of the sinking fund which were duly resumed in 1919.

The Bulgarian Debt—The "peasant Government" which now rules Bulgaria has been bitterly criticised from the standpoint of the town-dwellers; but it is doing its best to restore the national credit by beginning to resume the service of the debt. The announcement is made that it is paying, in French francs, the arrears of interest and sinking fund accrued since Bulgaria entered the war, on

A COUNTRY-WIDE policy of friendly co-operation with well-established, carefully chosen banking correspondents provides for Irving over-seas customers reliable and responsive sources of information and facilities of service in all the market places of America.

IRVING NATIONAL BANK
WOOLWORTH BUILDING, NEW YORK

LONDON OFFICE: PINNER'S HALL, OLD BROAD STREET

the loans of 1902, 1904 and 1907; it promises to complete these payments by December 31st, and to resume the regular service of the debt on January 1st. On the 5 per cent. loan of 1896 the arrears will be paid in nine instalments, beginning this month and ending on January 14, 1923, the regular service being resumed a year later. This loan and the 5 per cent. of 1904 are not quoted in London; the 5 per cent. of 1902 and the 4½ per cent. of 1907, however, are dealt in both here and on the chief Continental bourses, and are secured on certain specified revenues. Nothing, however, appears to be known of an impending resumption of payments in London. Of the other two loans quoted here—the 6 per cent. of 1892 and the 4½ per cent. of 1910—nothing is said in the announcement, but they are secured respectively on the State railway receipts and the port dues of Thrace and Burgas—which will take time to recover—and on the general revenue, so that it seems natural that other loans should have priority.

Rio Tinto Dividend Passed.—In announcing that they propose to pay no interim dividend on the ordinary shares, the directors of the Rio Tinto Company give their usual brief report, which explains the reason for this step. It is stated that the European pyrites markets have not yet recovered from the effects of the war, quantities being consumed are small, and that it will probably be many months before normal consumption is resumed. In the United States market the production of native sulphur material developed during the war is taking part of the pyrites market, and such contracts as can be obtained for pyrites are at very low prices. The cost of coal and iron used at the mines is still very high, but as freights are receding and new sources of supply are being tapped, a reduction next year in the present very high cost of materials is expected. The labour situation in Spain generally has been and is very unsatisfactory. For more than two months our operations have been almost at a standstill. Till then our workmen were fairly satisfied, as we were supplying essential foods at pre-war prices, and during the last few years had greatly improved social and general conditions of life and had modernised housing. The men recently applied for increased pay in lieu of food benefits, and we have acceded to their request, and, so far as we can judge, the men generally are satisfied with the increases granted to cover the extra cost of living. Outside influences, however, are extremely strong, and are preventing the workmen from resuming operations, and, though negotiations continue, no settlement has yet been arrived at."

Johannesburg Consolidated.—The report of the Johannesburg Consolidated Investment Company for the year ended June 30th reflects the benefit which the establishment of a premium has conferred upon the gold mining companies of South Africa. The gross profit is the highest on record, and at £528,300 shows an increase of £182,100 as compared with last year. There was but a very slight increase in administration expenses, and the balance available for distribution is nearly £180,000 higher at £499,200. The following summary shows the results since 1913-14:—

YEAR ENDED JUNE 30th.

	1914.	1915.	1916.	1917.	1918.	1919.	1920.
	£	£	£	£	£	£	£

* Free of tax.

The distribution on the ordinary shares is raised from 7½ to 12½ per cent., free of tax, and takes the form of a 10 per cent. dividend and a 2½ per cent. bonus. The value of the gold produced by the company's group of mines in the year 1919-20 was £9,500,000. The company is also largely interested in the leading diamond mining companies of South Africa, and the report states that last year's dividends were on a record scale. It is pointed out that for the gold-producing companies an adverse factor, in addition to increased working costs, has been the exceptionally high exchange rates charged by the South African banks for the negotiation of sight drafts drawn against gold shipments. The maximum rate recorded was 8½ per cent., but the rate has since been reduced practically to a normal basis. "The Union Government, recognising the ill-effect of these prohibitive rates, introduced the South African Currency Bill, the operation of which will certainly be the means of restricting the further shipment of sovereigns to South Africa."

African and Eastern Trade Corporation.—A circular has been issued to the shareholders of the African and Eastern Trade Corporation, stating that the directors have lately had under consideration a scheme for bringing under one management the various businesses owned or controlled by the corporation and the West African interests owned or controlled by Lever Brothers, Limited, including the business of the Niger Company, Limited, which will involve a substantial reorganisation of the capital of the corporation. A contract with this object has been entered into between Lord Leverhulme and the corporation, the carrying out of which necessitates reorganisation of the capital of the corporation. It is proposed, in the first instance, to create 3,000,000 new 15 per cent. preferred ordinary shares of £1 each, carrying a 15 per cent. cumulative

dividend. These 3,000,000 shares, with the unissued £1 ordinary shares, amounting to upwards of 2,500,000 (which it is proposed to convert into similar 15 per cent. preferred ordinary shares), will provide more than sufficient shares to enable the company to issue to each ordinary shareholder on the register, when the sanction of the Court is obtained to the scheme, a bonus distribution of 1½ 15 per cent. preferred ordinary shares of £1 (paid up in full out of reserve) for every £1 of paid-up ordinary share capital then held by him. The whole of the ordinary shares (both issued and unissued) are to be converted into 15 per cent. preferred ordinary shares for the purposes of the scheme, and a new class of 4,000,000 ordinary shares, ranking behind these preferred ordinary shares, will be created, 1,000,000 of the "B" 6 per cent. preference shares, which have never been allotted or issued, being at the same time cancelled. All the details of the scheme will be interdependent, and subject to the sanction of the Court, but on the scheme being carried through in its entirety, the corporation will issue to Lord Leverhulme or his nominees the 4,000,000 new ordinary shares, to be created as above stated, credited as fully paid in exchange for 4,000,000 fully-paid 20 per cent. "A" preferred ordinary shares of £1 each in Lever Brothers, Limited. It is not proposed to interfere with the existing management of the corporation, and the present directors will continue to carry on its business as in the past. Five of these directors will join the board of the Niger Company, Limited,

THE REVENUE.

I.—An Account of the Total Revenue of the United Kingdom in the undermentioned periods of the Year ending March 31, 1921, as compared with the corresponding periods of the preceding Year.

Treasury, September 30, 1920.

for a period of five years. As it also forms part of the arrangements that the whole of the shares and interests of Lever Brothers, Limited, in West African concerns will be made over to the Niger Company at cost, payable in fully-paid ordinary shares, the unified control and management of the whole of the above businesses will be secured.

Fight the Famine Council.—A three days' International Conference in London has been arranged by the Fight the Famine Council on the restoration of Europe. It will take place on October 11th-13th. There will be six sessions, morning and afternoon, and for each a different chairman. The chairmen are as follows :—Professor L. P. Jacks, Mr Jerome K. Jerome, Sir George Paish, Sir William Beveridge, Lord Parmoor, and Bishop Gore. The following are among the British delegates :—Rt. Hon. Earl Beauchamp, Rt. Hon. T. McKinnon Wood, Mr Sidney Webb, Mr J. Ramsay Macdonald, Sir Sydney Olivier, Professor Arnold Toynbee, Mr A. G. Gardiner, Canon Temple, Mr Frank Hodges, Mr C. T. Cramp, Miss Margaret Bondfield, and Miss Maude Royden. Delegates, including many public and well-known men, will attend from all parts of Europe, and an interesting programme has been arranged. Full particulars can be obtained from the secretary to the Fight the Famine Council, Premier House, Southampton row, W.C. 1.

The Unemployment Problem.—The Industrial League and Council informs us that a number of prominent representatives of labour and employers accepted the invitation of Mr H. V. Roe to spend a recent week-end with him at Leatherhead in order to discuss unemployment. The discussion was opened by Mr Roe, and the conclusions which were ultimately come to were :—

1. Each industry should form a joint industrial council of employers and employed, at which all the incidents of unemployment should be thoroughly and scientifically investigated.
2. Each industry should decide whether it is possible for the industry to maintain and supervise its own unemployed.
3. The representatives of all the joint industrial councils should then meet and consider whether unemployment should be settled by each industry or by all industries as a whole.

UNITED STATES.—LESS MONETARY TENSION—THE TRADE OUTLOOK—DEMAND FOR BONDS.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 17.

THE money tension is gradually relaxing. Call loan rates on the Stock Exchange early this week ruled at 7 per cent., and later at 6 per cent., but of greater significance is the distinctly easier tone displayed by time money which is now quoted at 8¼ to 8¾ per cent., according to maturity and collateral, compared with 8½ to 9 per cent. a week or so ago. In exceptional cases some 60-90-day loans on mixed collateral have been negotiated recently at 8 per cent.—a noteworthy development because little, if any, time money has actually been put out at that rate in Wall Street since last June. Not only are rates lower, but banks seem more disposed to lend funds for fixed periods than heretofore, although offerings are by no means liberal. Reasons for the reduction in rates at this time are not entirely clear, and the improvement was quite unexpected, since crop-moving demands are still heavy, and the position of banks generally, as revealed in their latest statements, was not such as to encourage hopes of an immediate change for the better in the money situation; at the end of last week the average reserve ratio for the entire Federal Reserve system was 42⅞ per cent.; it has remained for some time around that figure, which is near the low point of the year. As a matter of fact, an actual stiffening of rates, instead of any relaxation, had been expected this week, in view of the exceptionally heavy financial turnover. One factor which has undoubtedly contributed to the relaxation in money is the further progress made by railroads in relieving the freight congestion, which in turn has released a great deal of capital heretofore tied up in goods and commodities awaiting shipment. The volume of traffic handled by the railroads in the week ended August 28th, amounting to 985,064 carloads of commercial freight, broke all previous records for that period, and there is reason to believe that the freight movement since then has continued exceptionally large. Another possible and partial explanation of the easier money tone is that banks and other lenders, realising that time money will probably show further relaxation towards the end of the year after crop-moving demands are over, wish to take advantage of the present rates, which are still abnormally high. In some quarters the opinion is expressed that the corner has been turned in the money stringency, and that from now on there will be a gradual improvement. It is unsafe, however, to make any predictions, because, as Governor Harding, of the Federal Reserve Board, points out, loans are expanding rapidly because of crop-moving requirements; "our money market is at present distinctly a lender's, and not a borrower's market," and banks throughout the country are receiving more applications for loans than they can grant.

Trade and industry continue to show a great deal of irregularity. The volume of business, as a whole, can only be described as fair, and autumn trade is very slow in developing, especially in textiles; the advance of the season and the need of supplies have forced purchases of the latter, but uncertainty as to future prices is still causing hesitancy in forward buying. Further drastic reductions have just been made in coloured cotton goods in an effort to stimulate demand, and woollen mills have resumed operations, but buying is not at all impressive; recent reductions in prices of spring woollens have thus far failed to attract much business. Much the same condition prevails in the hosiery and silk trades. The iron and steel trade is, if anything, quieter than in recent weeks; the falling off in demand from automobile manufacturers has not yet been offset by increased railroad buying. Grain prices have declined sharply this week, and the general tendency of commodity prices is still downward.

Securities markets continue fairly active and firm, especially bonds, which reflect increased investment demand. The new 8 per cent. bonds of the recent French loan advanced above 102 this week.

FRANCE.—BRUSSELS CONFERENCE—COAL—DEPRESSION IN THE MOTOR TRADE—NEW CAPITAL—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, September 28.

THE results that may be expected from the International Conference called at Brussels by the League of Nations are being awaited here with more curiosity than impatience, perhaps, from the fact that France is still sceptical of the value of any other argument than force to bring about the fulfilment of the indemnity clauses of the Versailles Treaty. Whether the French view will

prevail in the end remains to be seen, but there is every evidence that, so far from weakening, the determination of France to receive payment from Germany tends to grow in strength. The election of M. Millerand as President of the Republic can only be regarded as confirming this view. In his first Message to Parliament M. Millerand gave first place to the necessity for the Treaty to be executed in its entirety, and this expression of opinion was fully endorsed by the practically unanimous vote of confidence in the new Ministry that was passed by the Chamber.

Domestically speaking, the situation of France is now surprisingly better. The better deliveries of German coal, the absence of industrial unrest of any notable character, the steady increase in production, the gradual redressing of the trade balance, the unexpectedly good harvest, and the strong position of M. Millerand and the new Ministry in the eyes of the country at large are all factors that have given rise to a feeling of greater calm and freedom from nervousness than has prevailed for many months. Thanks to the improved coal deliveries the outlook for the winter is now much better. In Paris municipal stocks have now been accumulated to such an extent that the coal ration, as from October 1st, has been increased (for domestic use) from 25 kilograms per head per month to double that quantity. Prices of coal for the whole country have also been reduced by the Minister of Public Works to the extent of 60f per ton. Ordinary household coal and "boulets" are now sold at 270f per ton, lignite briquettes at 190f, and anthracite at from 260f to 320f, according to grade. The price of ordinary coal used for central heating and for offices, small tradesmen, &c., has been correspondingly reduced to 340f per ton, with other qualities in proportion. Shipments of British coal, which were suspended on the first rumours of a strike, have been resumed, and substantial deliveries were made at Marseilles last week from South Wales collieries. The arrival of 34,000 tons of American coal at the same port during the current month is also reported. Difficulties having arisen between the Belgian Government and certain of the large coal-owners in that country, who argue that the prices fixed under the recent agreement between the two countries are insufficient, deliveries from Belgium latterly have fallen short of the agreed quantity by about one-third.

Pessimistic reports are in circulation as to the situation in the French automobile industry, and constructors have appealed to the Government to prohibit, for the time being, all imports connected with their trade. Sales have fallen off seriously, particularly in the heavier classes of vehicles, and reductions of working staffs have either already taken place or are expected in many factories. The cause appears to be twofold: first, the fact that the French market has been flooded with a large number of cars of every description left behind by the American and British armies, and, secondly, the substantial increase in the price of materials, taxation, wages, and running costs. In accordance with the custom here, many intending buyers placed their orders with constructors several months ago, paying the usual deposit and agreeing to pay whatever the price of the car might prove to be when ready for delivery. The increased cost has in all cases proved to be so much greater than was anticipated, however, that in a very large number of instances the potential purchaser has preferred to sacrifice his deposit and leave the car on the maker's hands. Motor spirit now costs 12f 50c in place of 3f 75c, tyres are four times the pre-war price, garage accommodation has risen from 50f a month to 300f, and other charges are proportionate. Efforts are being made in certain directions to "dump" a portion of the existing French output of cars in England. The outlook generally, however, is regarded as serious, and it is feared that nothing but an all round fall in prices can provide a remedy.

The *Economiste Européen,* for the first time since 1914, publishes a detailed table of capital issues in France. The figures are of peculiar interest, because they cover the period of the war, from 1915 to 1918 inclusively. The figures—which, as it is pointed out, can only be taken as approximative, no matter how much care has been devoted to compiling them—are as follows :—

	State, Departmental and City Loans. Francs.	Various Obligations. Francs.	Share Capital and Debenture. Francs.
1915	15,204,960,000 ..	329,195,000 ..	39,149,000
1916	11,513,978,000 ..	422,382,000 ..	244,659,122
1917	15,435,096,000 ..	1,587,311,000 ..	627,507,850
1918	30,690,456,000 ..	1,127,070,000 ..	701,554,500
	72,844,490,000 ..	3,456,958,000 ..	1,612,870,472

The issues of share capital and debentures for 1915 included 2,660,000f in connection with foreign concerns; for 1916, 99,392,222f (plus 8,571,000f in obligations); for 1917, 151,845,650f; and for 1918, 72,250,000f.

To the totals given above, which add up to a bulk figure of 77,923,318,722f, must be added the amount invested in Bons and Obligations de la Défense Nationale. No official periodical statistics are published, however, as to these investments. Figures that have been published from time to time, however, show that the value of these securities that were in circulation on January 25, 1915, which was 2,487 million francs, had increased to 8,533 million francs on October 15, 1915, 15,074 million francs on September 30, 1916, 20,211 million francs on August 15, 1917, and 30,000 million francs in October, 1918. The amount invested in this form may therefore be placed at an average of 7,000 million francs for the years 1915 and 1916, 6,000 million francs for 1917, and 8,000 million francs for 1918.

The Bourse during the past week was characterised by a good deal of nervousness, and quotations fell generally. The reasons are not difficult to find. The unsettled outlook in England, owing to the action of the miners, the curious settlement of the Italian troubles by the institution of some kind of participation in the operation of the factories by the workmen, and the crisis which exists here in connection with the motor-car, shipping, indiarubber, and other industries were, of course, all factors in the situation. Another disturbing element was the pending new issue of 6 per cent. Rentes, the attractive terms of which have brought forward a large number of offers which, coming on a very narrow market, have made prices heavy. The most serious factor is the depression in the industrial world. This was foreseen several months ago, and is regarded as likely to increase, rather than otherwise, and as more than likely to bring about a general and progressive fall in the price of most products. Rentes have all moved up a trifle. It is officially announced that the Bulgarian Government have resumed interest payments on 1902, 1904, and 1907 issues as from September 22nd for the period between November 1, 1915, and the date of the Armistice, and will pay the balances due before the end of the year, when the regular service of the debt will be resumed. Payment of accrued interest and redemption of bonds drawn in connection with the 5 per cent. issue of 1896 will be recommenced on October 1st, but the regular service in this issue is not to be resumed before January 14, 1924. Banks fell away generally. A special general meeting of the Société Générale has been called for October 11th for the purpose of reducing the share capital of the bank to 250 million francs, which will be effected by a new issue of shares, and the exchange of two old shares each of 250f paid up for one new share of 500f fully paid. Mining descriptions all dropped sharply, Tintos marking a fall of 100f on the persistence of the strike. Oils followed the general trend, Royal Dutch falling from 40,000 to 38,950 and Shells from 427 to 399. Mexican Eagles were marked down from 612 to 593 on very large offerings here, which were absorbed entirely by London. Among sugars, which have been strongly attacked, Sucreries d'Egypt dropped from 1,146 to 1,080 on rumours of a glut in the Far East.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

GERMANY — FINANCES — COMPULSORY LABOUR — EXCHANGE AND BOURSE — EXPORT DUTIES — CROPS.

(FROM OUR CORRESPONDENT.)

BERLIN, September 23.

THE Minister of Finances, Dr Wirth, this week offered and withdrew his resignation. The cause of the trouble was the heavy demands made by the departments for increase of official salaries. The question has been settled in Dr Wirth's favour. In future departmental demands for increased expenditure will not be sanctioned as heretofore by a simple majority in the Cabinet, but will need the separate sanction of the Finance Minister. Within the Cabinet will be formed an Economical Commission, consisting of the Finance Minister, Minister of Industry, and Labour, Food, and Communications Ministers, the first work of which will be to submit a comprehensive plan of financial and industrial reform. It is unofficially reported that the Ministry of Industry has prepared a plan for Compulsory Labour Service for young persons, who will be required to work in coal mines, forests, and agriculture. To the Cabinet Dr Wirth has made a lengthy statement showing the continuing aggravation of Federal finances. The total debt on September 18th was 242.7 milliards, consisting of a funded debt of 91 milliards, discounted Treasury notes and bills 132.3 milliards, and further obligations 19.4 milliards. In addition are floating debts still to be taken over from the States and the capitalisation of interest due to the States for surrender of railways, together amounting to 25 milliards, and debts of 18 milliards to the States for support of soldiers' families and war social work.

The current financial situation, as exposed by Dr Wirth, is much worse. The ordinary Budget for 1920 as it now goes to the Reichstag shows a balanced revenue and expenditure of 39.8 milliards; but 9.4 milliards of the taxes in this sum go to the States and Municipalities. The extraordinary Budget shows expenditure of 39.7 milliards and revenue of only 2 milliards. The railways, posts, telegraphs, and telephones, which really make a third Budget, bring for railways a deficit of 16 milliards, and for posts, &c., 2 milliards. The total deficit is therefore 55.7 milliards marks. This completes the current expenditure proper. In addition Germany will have to pay to German subjects for loss of commercial shipping 17 milliards; for the liquidation of German property abroad 90 milliards; for surrender of arms 10½ milliards; and 13½ milliards compensation under the war losses law of July 3, 1916. The total of compensation to German subjects is 131 milliards, but this estimate leaves out of account the fall in mark exchange during the last few weeks. The burden of the army of occupation and of the different Entente Commissions will be 14.9 milliards. Against these liabilities Dr Wirth promised nothing except a law preventing the States' raising their officials' salaries, so compelling the Republic to follow suit; unshrinking enforcement of the taxes already legalised, and a law by which a large part of the yield of the emergency levy will be immediately realised. The last measure is understood to be some form of combination between the levy and a forced loan. In addition, the Finance Minister promised to stop the increase of the bureaucracy and to hasten the liquidation of the costly war industrial companies and other war economical departments. The Cabinet further decided to prepare a law socialising mining on the basis of the report of the Socialisation Commission.

In connection with the Brussels Conference many unofficial projects are published for fixing the Reichsmark's foreign exchange between narrow limits of fluctuation. Most of these projects take the American dollar as unit, and assume that the real value of the mark is a little above its present exchange, and that the Reichsbank could be so strengthened that it could intervene with purchases to keep the mark between about 40 and 50 to the dollar, until a fundamental improvement in Germany's condition—a stoppage of the inflation or a permanent restoration of the export trade—enabled higher limits of fluctuation to be fixed and maintained for a considerable time. That this could be done only by means of a large foreign loan is admitted. The prospect of such a loan is not considered great, in view of the fact that most of Europe is in Germany's plight, partly in worse plight, and that countries like Norway and Denmark, whose fundamental position is quite sound and which have no undefined war liabilities, have difficulty in contracting foreign exchange loans on bearable terms.

The Reichsbank for the week ending September 15th showed—for the first time for many weeks—a decline in the paper circulation. The decline is only 4.6 millions. On the 18th the foreign exchanges touched their highest in the present movement, sterling selling at 240.75 marks, the dollar at 67.82 marks, the gulden (100) at 2132.5 marks, and the Swiss franc (100) at 1101.10 marks. Since then there has been a slight mark recovery. The Reichsbank denies reports that it has been selling marks, and declares that, on the contrary, it has been buying, and the story that the recent collapse is due to English clearing demands is also denied. It seems that the main causes are speculative deals, but it is also true that Germany's import trade is reviving. In part the revival is due to the fact that the slow mark decline which preceded the recent heavy drop improved the export industry, and so increased the demand for foreign materials, and also to the fact that the Government lately freed the import of maize, lard, oilseeds, coffee (in part), and other products.

The Bourse is moving in close correspondence with the exchanges, being very firm except on days of mark recovery. On September 18th the 35 loans and stocks usually taken as standard registered a sum quotation of 13,884 marks, exceeding the 13,722 of March 1st, the highest point of the year. At the beginning of the week, indifferent crop reports, doubt as to the Brussels Conference, and the slight mark recovery caused reserve, and there was considerable selling by speculators who had bought before the new boom began. Heavy foreign buying was recorded in the 3 per cent. Reichsanleihe, which to-day closed at 65. The stocks of the "Aniline Concern," which is a combine of seven of the largest chemical works, were bought mainly on basis of fusion stories. The course of industrial stocks was influenced by favourable annual reports showing large increases of profits as compared with 1918-19 and higher dividends. Textile companies have declared dividends of up to 30 per cent., or including bounties under various forms up to 60 per cent. These high profits were made during the mark exchange fall and the consequent price-rise of raw materials of last winter. The companies charged the public not on the basis of the prices of materials actually used, but of the much higher material prices at time of sale. Doubled and trebled dividends have also been declared by several metal companies—*e.g.*, the Bochum Cast Steel Company, a

favourite recent object of bull speculation, has declared 15 per cent., as against 5 per cent. last year. The metal and engineering companies report large increases of foreign orders, all a result of the increased buying power of foreign currency, and some textile districts which were entirely without work two months back report that they have now orders for months ahead. The Government is preparing bills for preventing unemployment. The plans cover: (1) Public works, (2) public orders to industries, (3) granting of credit on a large scale, and (4) preventing unjustified closing down or dismantling of works. The last report, for September 1st, shows 419,785 unemployed as against 411,565 on August 15th, but it seems certain that in the present month unemployment has declined. A Commission of mining experts, mineowners, and miners has been appointed to consider measures for increasing the coal output.

The Ministry of Industry has reduced still more of the export duties. The new duty for locomotives, tenders, steam engines, turbines, hydraulic machinery, motors, and goods in similar classes is 3 per cent.; on arc lamps and parts, 5 per cent.; on carbon and metal thread glow lamps, 7 per cent.; on isolation material of porcelain, 5 per cent.; and of other materials, 8 per cent. Most farm machines are fixed at 2 per cent.; sewing machines, 4 per cent.; clocks, 4 per cent.; and machines for the leather, shoe, lime, clay, cement, and allied industries, 2 per cent. The duties on chemicals have also mostly been reduced, and the duties on natural and artificial mineral curative salts abolished. There are further duty reductions on articles classed under about 100 headings in the original schedule of April 8th. The effect of these reductions when taken together with the recovery of the foreign exchanges is considered likely to cause a great increase in export activity.

Reports about the harvest are less favourable. The potato yield will be less than last year's. The beet crop will be good. The rye crop, the most important of all, has proved disappointing. The whole crop of bread grains will not exceed 2,000,000 tons, which means, says the President of the Federal Grain Bureau, that the same amount will have to be imported at a probable cost of 10 milliard marks, counting a price of 5,000 marks a ton. To put such a burden on the population in shape of high bread prices would, says this official, be "unsocial"; so the burden must be borne by the Federal Finances and imposed in "form of general taxation." It is this doubtful policy—the policy of concealing from the working man that he must live worse than he did in 1914—which is largely responsible for the condition of public finances exposed as above by Dr Wirth.

CANADA.—THE TARIFF COMMISSION—THE CASES OF THE FARMERS AND THE MANUFACTURERS—THE RAILWAY RATES DECISION—INSPECTION TOUR BY GRAND TRUNK ARBITRATORS—BUSINESS AND FINANCIAL CONDITIONS.

MEDICINE HAT (Alberta), September 17.

THE Tariff Commission, consisting of a Committee of the Federal Cabinet, held its first session in the City Hall of Winnipeg, on September 13th. As Mr J. A. Calder, Minister of Immigration, who is one of the three Commissioners, has been detained in Europe, and Mr Tolmie, the Minister of Agriculture, who had been selected to deputise for him, had been seized by a sudden illness, only two Commissioners, Sir H. Drayton, the Finance Minister, and Senator Robertson, the Minister of Labour, will be available for the earlier hearings. The Winnipeg session took the form of a limited reconnaisance by anti-Protectionist farming organisations, and a counter-attack on a more extensive scale by the defenders of the tariff system. Mr N. P. Lambert, the Secretary of the Canadian Council of Agriculture, made in a compact memorandum a general indictment of the protectionist system. He traced the history of the anti-tariff movement in recent years, maintained that agriculture, Canada's basic industry, had been unfairly dealt with, and denounced the existing protectionist system as inimical to the proper development of the Dominion. Apart from its fiscal injustices, protection was a wasteful and costly method of raising revenue. The cost of collecting $158,000,000 by Customs duties in the last fiscal year had reached $5,000,000, and he estimated that the consumer in Canada had to pay during 1919 $305,000,000 for the $158,000,000 accruing to the Treasury. He urged the substitution of the New National policy of the farmers' party, whose bedrock is a low Customs tariff, combined with direct methods of taxation. He claimed that the income-tax, if thoroughly and forcefully applied, could be made to yield at least $200,000,000 per annum, and asked for improvements in the machinery and forms. He also suggested the immediate holding of a conference between the Federal Government, the provincial administrations, and the leading municipalities to define their respective fields of taxation, and eliminate the present confusion and overlapping. He contended that the New National policy was devised not for the benefit only of the farming class, but in the interests of the whole country.

Apart from an interlude by the local disciples of Henry George, the rest of the Winnipeg sitting was occupied by the manufacturers. All the leading officials of the Canadian manufacturers were in attendance, and their avowed tactics were to win the first round in the economic debate by unloading a mass of propaganda in defence of the existing tariff. Mr Mackinnon, president of the C.M.A., occupied nearly two hours in reading to the Commission a most elaborate apologia for the protectionist system, and it has been published at length in all the daily papers of Western Canada. It rehearsed many time-worn arguments for Protection, the need for revenue through post-war obligations, the necessity for National self-sufficiency, the impetus given to National development and increase of population, the demand for a variety of occupations and careers such as agriculture could not afford, and the evils of foreign competition, the U.S. and Japan being the chief bogeys. Many ghosts of bygone fiscal controversies like Mr Taft's famous "adjunct" letter to Colonel Roosevelt, which more than any other single thing defeated Reciprocity in 1911, came to life, and statistics were manipulated with some skill. British agriculture was depicted as having come to woeful disaster under Free Trade, and an attempt was made to prove that Great Britain had virtually accepted a Protectionist policy. Great emphasis was laid on the number of American firms who had established branch factories in Canada to escape the drawback of the Canadian tariff. The main fabric of the manufacturers' case was that Canada had adopted the policy of Protection to secure a fuller National development, that it had been successful in this end, that during 40 years neither of the two great political parties had attempted to interfere seriously with it, and that the enactment of the fiscal changes proposed by the farmers' New National policy would spell ruin for numerous industries, and even for whole communities. There were many fallacies in the arguments and inaccuracies in the facts presented in the memorandum, but it constituted a formidable presentment of the Protectionist case. It failed, however, to meet in any way one of the most effective charges of the anti-Protectionist forces in Canada, viz., the disappointing nature of the annual increase since 1878 of the country's population. The result of each of the last three censuses has fallen short of expectations.

This general case was reinforced by a series of arguments advanced on behalf of particular industries. Mr Findlay, president of the Massey-Harris company, stated the case for the agricultural implement industry, which, he claimed, had secured a firm foothold in Canada with the help of the tariff. He argued that the duty on farm implements only added one cent. per bushel to the price of wheat. He made the significant admission that his particular firm, the largest in Canada, could through possession of a valuable export trade, exist without the protection of a tariff, but out of solicitude for the general manufacturing interest he was opposed to any fiscal changes. The textile manufacturers were represented by Mr R. A. Pringle, one of the leaders of the Ottawa Bar, who addressed the Commission for nearly four hours. As he was primarily an advocate and politician, his contribution to an economic discussion was disappointing. The Cost of Living Com-

mission had revealed the textile manufacturers of Canada as making enormous profits, but their counsel contended that they paled into insignificance besides the returns secured by Yorkshire and Lancashire manufacturers, being evidently oblivious to the danger that this might be testimony to the merits of Free-trade. Mr Pringle declared that the adoption of the farmers' policy would force the closing of most of the textile mills in Canada, and that his clients preferred to meet their fate by summary process rather than by lingering torture as the farmers, who aim at Free-trade with Britain by gradual stages spread over five years, planned. Then followed a succession of local Winnipeg manufacturers, who narrated the position of their separate industries and pleaded for the continuance of Protection as indispensable to their salvation. One firm of bagmakers admitted that a lowering of duties would not hurt them, and one plea for the complete abolition of a duty on fuel oil was advanced; the object was to assist the manufacture of some by-products. It was noticeable that there were no demands for increased Protection.

At Medicine Hat, in Alberta, where the second session was held, the farmers made no representations, but the manufacturers presented their case through two local industrialists. One sought continued Protection for coarse pottery, and the other, who was making farm tractors, demanded the repeal of the Order in Council which has permitted since 1918 the free importation of agricultural tractors under the value of $1,400. Both supported the general principle of tariff Protection, but admitted, as did more than one Winnipeg manufacturer, that their higher cost of production, which made Protection necessary, was at least partially due to the duties imposed on articles which were part of the raw material for their industries. The Commission is already disclosing the fatal dilemma which confronts all Protectionist systems—viz., that the finished product of one industry is often the raw material of another equally important. The Commission is now proceeding direct to the Pacific Coast. Sir H. Drayton, thanks to his experience on the Railway Commission, makes a most satisfactory chairman. He is agreeable and quick-witted, and his cross-examinations are always pertinent. Nor has he disclosed any bias towards the manufacturing interests.

The Railway Commission have now announced their decision on the application of the railway for increased freight rates, and, as was foreshadowed, have conceded the major part of the application. Henceforth freight rates will be advanced 40 per cent. on all Canadian lines east of the Great Lakes and 35 per cent. in the western divisions. After December 31st 5 per cent. of this increase will be cancelled in each case. Certain commodities, including milk and material for building roads, are exempted from the increase, and coal is accorded a special schedule, the rate of increase varying with the distance of the haul. Simultaneously passenger rates are advanced 20 per cent. for the time being, but half this increase is cancelled on December 31st, and on July 1, 1921, the existing passenger rates are restored. Sleeping-car charges are advanced 50 per cent. permanently, and excess baggage rates 20 per cent.

The decision has aroused a great outcry of protest from a variety of quarters, and the Provincial Governments of Manitoba and Saskatchewan have decided to exercise the statutory right of appeal from the decision to the Cabinet in Council. The hearing of the appeal will take place before the end of September, but the Government have declined to grant a suspension of the new rates pending the final decision. The Manitoba *Free Press* and Toronto *Globe* have been conducting a vigorous campaign against the award. They contend that while the new rates will not permit the National system to escape a deficit, they present the C.P.R. with the possibility of an unnecessarily handsome surplus. Even Mr F. B. Carvell, the chairman of the Railway Commission, admits that the C.P.R. ought to have a surplus of over 15 million dollars under the new rates, but the critics of the decision claim that this calculation is absurdly low, and accuse Mr Carvell of a too friendly bias towards the great railway corporation.

The three distinguished arbitrators who will decide the issue between the Government and the Grand Trunk Railway have formed the resolution that a personal inspection of the main lines of the system would help them in forming their judgment. They will undertake this task within the next month, and when it is accomplished there is no reason why the real business of the arbitration should not begin at once.

Cutting is practically finished in the West, and with threshing operations completed on many farms the crop is already moving to the seaboard. Rust and frost have done some damage to the later fields, but, on the whole, the crop is satisfactory, and is the most profitable that the prairie provinces have known since 1915. Their yield of wheat is still calculated at 260,000,000 bushels. As farmers are still busy in their fields, country retailers find business somewhat quiet, and this state of affairs is reflected in the city, but it is expected that a vigorous epidemic of buying will start before the end of this month and give a general stimulus to trade. The stock market continues dull, though the paper stocks are active by spurts. With the banks requiring all their funds to finance the crop money is very tight. The revenue returns are very satisfactory, and the new sales and luxury taxes are yielding handsome returns. As a result of them and the increase in railway rates, which will be cumulative, there are fears of a serious increase in the cost of living this winter. Exchange against Europe continues to decline, and is a disastrous barrier to our export trade. There are many complaints of the untoward effect on the Canadian hog market of the restrictions enforced by the British Government upon the price of imported bacon.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised	£3,000 000
Paid Up Capital	1,050,000
Reserve Fund and Undivided Profits	1,146,430

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

ITALY.—A VICTORY OF LABOURISM OVER EXTREME COMMUNISM — THE PRINCIPLE OF CONTROL OF WORKERS OVER INDUSTRY ACCEPTED.

(FROM OUR CORRESPONDENT.)

ROME, Sepember 25.

THE metal-workers' movement, if not at end, is in sight of termination. Horrid events, especially at Turin, are closing the long-drawn dispute: battles in the streets between insurgents and the police, works taken by force when the men, who had entrenched themselves within, attempted to oppose the police. At the time of writing the works are not as yet evacuated, but the agreement between masters and men may be said to be substantially complete.

The chain of events after my last letter (*Economist*, September 18th, p. 438) may be described in the following manner:—Elated by the facility with which men had rendered themselves masters of the works, and by the absence of Government interference to protect private property, a section of the Socialist and Anarchical party thought that the moment was at hand for attaining their ultimate object: Social revolution, overthrow of the monarchy and of the present economic *régime*, and universal extension of Sovietism to all lands, houses, industry, and commerce. The moderate section of union men took alarm at the suddenness of the movement; they stood for Socialism, but they preferred to reach the goal by successive steps. A meeting was convened at Milan; perhaps 500 representatives of labour unions, labour chambers, and Socialist party, for 48 hours, daily and nightly, discussed openly if revolution was to be proclaimed. The whole proceeding was somewhat of a farce, as the would-be conspirators against the State held continuous correspondence with the prefects of Turin and Milan—*i.e.*, with the representatives of the very Govern-

ment which they proposed to overthrow. At last the moderate section obtained the majority. The culminating incident was dramatic. Signor Gennari, secretary of the council of the Socialist party, seems to have read a Lenin message newly arrived from Russia, which gave the signal for revolution. In an impassioned speech Signor D'Aragona, M.P., secretary of the General Confederation of Labour, strenuously opposed the wild scheme, and invited the assembly to be content with aims perhaps less ambitious but more tangible, immediate increases of wages, and, above all, control by workers of industry. The victory of the moderate thesis was also the victory of the trade unionist spirit against the revolutionary communist spirit. In fact, a split is open between the Socialist party and the General Labour Confederation.

When the victory of the moderate or trade unionist section against the political and anarchical one was made manifest, Signor Giolitti stepped in, and convened at Turin, September 15th, the representatives of two great opposing organisations, the General Confederation of Industry and the General Confederation of Labour. The debate must have been long and interesting; at last the representatives of employers had to yield almost all their points, when Signor Giolitti declared that Government would have, by their initiative, imposed the most important and most opposed clause of the control of industry by the men if the representatives of employers had not accepted it. The agreement was, however, as yet not complete; there followed some negotiations in Milan and Rome, till finally at Rome, in the Premier's Cabinet, the two parties could reach the final agreement. The economic clauses are not the most remarkable: the wages were increased by 4 lire daily for men, 3.20 lire for youths from 18 to 20 years and women above 20 years, 2.40 lire for young men between 15 and 18 years and women below 20 years. No payment of wages for the days of occupation, and inversely no payment for damage done by workmen in the works. Increases of wages to commence from July 15, 1920. All men to keep their places, but an interchange between works will be arranged.

But the all-important clause was that relating to control of industry. The decree says: "As the General Confederation of Labour has claimed that the present system of relations between employers and employed should be modified so that the employed by means of their trade unions shall be able to control the industry, and as the same Confederation says that the said control aims to better disciplinary relations between employers and employed and to increase the product of industry and so greatly improve the economic life of the country, and as the General Confederation of Industry do not oppose themselves to the experiment of a control on the said lines in various branches of industry, we, Premier of Italy, decree that a Committee shall be formed composed of six members nominated by the General Confederation of Industry and six by the General Confederation of Labour which shall report on the methods most useful to the organisation of industry on the basis of workmen controlling the technical and financial conduct and the administration of industrial concerns."

The agreement was after September 20th ratified by unions of employers and employed. Especially interesting was the vote of the delegates of F.I.O.M. (Metal Workers' Federation), which gave 148,740 votes for, 42,140 against, and 1,099 abstentions from the agreement. A recent ballot by referendum among metal workers was taken subsequently, and the result—exact figures are as yet not at hand—is undoubtedly favourable to acceptance of the agreement. The Confederation of Labour was thus able to give the proof that the great majority of workers assent to its policy, which is one of progressive transformation of society in a Socialist sense without violence. They claim a great victory, as they have introduced triumphantly the principle of control in Italian industry. The Government claims that a peaceful revolution was made in the relations between capital and labour, and that, by their abstention from interference, the supremacy of Labour over Capital was proclaimed.

These may be bright spots. They are obscured by the means with which the victory of Labour was obtained—*i.e.*, the abdication of State to its primary function of maintaining order and respect for the law, the substitution, even if temporarily, of a new State, of a new order, of a new armed force to the existing State and order. The extremist faction and the Socialist party are not at all content with the solution. They say that the time is at hand for the last effort. What the Government consider a great victory of good sense over anarchy the Socialist party consider as an instalment obtained by the proletariat from a falling and tottering *régime*. As I have already observed in a previous letter, we Italians are a compromising folk, and so we are probably more apt to fulfil the hopes of the Government than those of Italian followers of Lenin.

SWITZERLAND.—PUBLIC FINANCE.

(FROM OUR CORRESPONDENT.)

GENEVA, September 24.

UP to the beginning of the war Swiss finance was one of the soundest in Europe. The Confederation had by 100 million francs more assets than liabilities; after six years of war the Confederation has by 1,100 million francs more liabilities than assets. The Cantons, of which Switzerland is composed, the Treasuries of which are, as a rule, more important for the taxpayer than the Confederation, had at the end of 1913 by 113 millions more assets than liabilities. Now there are in the cantonal balances 75 million francs more liabilities than assets. Of course, the commercial value of the forests, estates, electric power stations, banks, &c., belonging to the Cantons increased in even a higher proportion than the increase of the cantonal State debts. Nevertheless, the cantonal Treasuries have now to impose far more taxation on their citizens than they did before the war, when citizens of most of the Swiss Cantons did not know the meaning of an income-tax in the proper sense of the word. At this opportunity, it is necessary to draw public attention to a grave mistake made in the international statistics of taxation, presented to the Brussels Conference by the "League of Nations." In this statement only the taxation paid by the Swiss citizens for the Confederation are indicated, and not those paid for the Cantons. Now the cantonal Treasury in Switzerland undertakes Civil Services, public instruction, jurisdiction, police services, and practically all Governmental expenses which in other European countries fall on the charge of the central Government, and the money for which is collected by taxation for the central Treasury.

The Swiss leader of Treasury, Federal Councillor Musy, underlined in his Budget speech that he has not yet the means for balancing next year's Budget, there being 50 million francs for which the cover is not yet visible. The net debt of the Swiss Confederation of one milliard francs looks far smaller than that of practically all European countries. But one must not forget that this milliard is a milliard in good money, which means 3 milliards of lire, or 2½ milliards of French francs, or 10 milliards of marks, or 40 milliards of crowns. One must also remember that one-third of the securities held by the Swiss investor are securities the face value of which is expressed in depreciated currencies, the depreciation being in the average two-thirds of the portfolio.

Fortunately, it seems as if the culminating point of the crisis in Swiss public credit has been overcome. The issue of three and five year Treasury Bonds of the Swiss Confederation brought within a fortnight 200 million francs, a result surpassing all optimist estimations. Originally, it was planned to pay off the whole sum within 16 years, but it appears now that there will be possibilities of conversions for war debts, and the Government considers doubling the period of redemption. Unfortunately, the public services in the hands of the Confederation, the Federal Railways, Posts, Telegraphs, and so on, do not yet succeed in balancing their budget, so that from this side the danger of deficit threatens again. The delay in electrification, and consequently the enormous tribute of the Federal Railways to foreign importers of coal, the high rate of the Swiss franc, and consequently the avoiding of Swiss railroads by the transit between North and South, between East and West of Europe, are factors for which nobody in Switzerland is responsible. If the Swiss railways still belonged to private companies, the shareholders would not receive any dividends, at least since 1916.

But now the railways belong to the State, and the former shareholders, now bondholders, continue receiving interest. When anti-capitalist propagandists asked for nationalisation of railroads in Switzerland, they did not foresee that this so-called Socialist measure would turn to be a very efficient protection of capitalist profits.

Letters to the Editor.

INDIAN EXCHANGE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Much speculation is now current regarding the continued depreciation of the rupee and the possibility of an early recovery. Some light has been thrown on present conditions by the report in the Indian papers recently to hand of a discussion in the Imperial Legislature on the introduction of the Indian Coinage Bill.

It will be remembered that on the recommendation of the Indian Currency Commission the par of exchange has been changed from Rs. 15 to £1 to Rs. 10 to £1, the new ratio to be on a gold and not a sterling basis. This was made necessary by the great increase in the market price of silver, as the metal value of the rupee exceeded the face value under the old ratio. The immediate result of the change was a rise in sterling exchange to about 2s 10d. There has since, however, been a complete reversal of the balance of trade with India, and the rate of exchange has fallen to round 1s 10d. The figures for August last, which have just been published, show the transformation that has taken place. In August, 1919, imports into India were Rs. 16 crores, and exports from India Rs. 27 crores. Last August the figures were—imports Rs. 30 crores, and exports Rs. 20 crores. Thus a favourable balance on the month of Rs. 11 crores has been converted into an unfavourable balance of Rs. 10 crores. In the causes of the changes in these figures and the possibilities of their continuance must be sought the probable future movements in exchange.

It will be noted that imports for August have nearly doubled. Stocks of piece goods in India were very low at the end of the war, and the rise in exchange from 1s 4d to 2s 10d stimulated demand by lessening the number of rupees that had to be paid for imports. Indian demand for piece goods is now, however, very dull, and this must appear shortly in reduced imports, which will tend to rectify the trade balance.

The reduction in exports is due to a variety of causes. India's principal exports are raw cotton, hides, jute, tea, and foodstuffs. Her chief customer for cotton is Japan, and the financial crisis in that country has greatly reduced her purchases. The large stocks of hides, jute, and tea in England and elsewhere, and, in the case of hides and jute, the industrial uncertainty now prevalent, have greatly reduced demand. Further, the reduction in the working hours in the jute mills has reduced consumption more than in most industries, owing to the greater relative dependence on mechanical factors and the consequent more direct ratio between working hours and output. The erection of many jute mills in India during the war will also probably tend permanently to affect the balance of jute available for export. With regard to foodstuffs, the cumulative effect of successive indifferent monsoons is seen in a shortage of stocks, which has made necessary a practical prohibition of exports. The present monsoon promises to be a fair one, at any rate over most of India, and it is possible therefore that some of the restrictions may be shortly removed.

A further factor that has restricted the market for India's exportable surplus of commodities is the condition of European countries generally, which makes trade possible only on terms of long credit. One of the main duties of the Indian representatives to the Brussels Economic Conference is to suggest credit or other facilities by means of which Europe may once more become a purchaser.

In view of the large quantity of gold in the country, mostly in hoards it is true, the present unfavourable balance of trade should theoretically be met by an export of gold. There is, however, a constant demand for religious and marriage purposes, which will not be denied, and, as these demands have been insufficiently met during the war, all such floating supplies as exist are quickly absorbed in the country.

The Government of India's sterling balances in England, which would normally be used to support exchange, are quite unable to meet a strain such as the present situation imposes. There is, therefore, nothing to fill the gap between imports and exports, and the gold parity of the rupee is for the present abandoned.

It should be noted that, as the rupee is now harnessed to gold and not to sterling, a recovery in the balance of trade will not necessarily stabilise exchange at the 2s parity, but may drive it once more considerably above this figure. A stable exchange is only possible when sterling itself is once more on an effective gold basis.

In effect, India is only suffering from another form of exchange ailment, from which no country is at present free. Her constitution is, however, healthy, in that almost alone at the present time she can boast of a convertible note issue, and her ailment is therefore more the result of the sickness of other countries than of inherent weakness. —I am, Sir, yours truly, E. P. STOCKER.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The recent Indian Currency Committee recommended the alteration of the sovereign ratio of the rupee from Rs. 15 to Rs. 10.

The necessary Bill has now been brought before the Viceroy's Legislative Council, and a detailed report of the Finance Minister's address in introducing the measure is given in the *Times* of India, Mail Edition, dated September 4th last. He is reported to have said, "Now what has been the history of silver subsequent to the issue of the report? I must refer to the subject, because we have been told that subsequent events show that the high price of silver which then caused us so much apprehension cannot be a permanent danger. When the Committee reported, silver stood at 78d; it subsequently flattered the hopes of those who have advanced this argument by descending to 44d; it now stands at 61d. I remind the Council again that at Rs. 15 parity the melting point of silver is 43d. The conclusion is inevitable. Return today to Rs. 15 parity, and you will either have to re-introduce and maintain the embargo on the export of silver, or you will have to debase your rupee or adopt Mr Dalal's impractical, but to mind almost identical, suggestion of a new coin of a lower fineness."

The argument is clear; at a certain London price of silver the bullion value of Rs. 15 is said to be worth more than one sovereign. This is to completely ignore what is a very vital factor in the whole problem, that one pound sterling is very different from one sovereign. The London or sterling price of silver by itself is no measure whatever of the point at which Rs. 15 are meltable, as against one sovereign. If the sterling price of gold or the dollar cross-rate were taken into account, then the sterling price of silver could be a means for measurement, but there is no suggestion in the Finance Minister's address that he has in mind that consideration. His remark that silver "now stands at 61d," which was the sterling price when he spoke, immediately followed by the statement that the melting point of silver is 43d (the melting point at the 15 to 1 ratio being 43d gold), shows that he regards the sterling quotation as sufficient in comparing the bullion value of the rupee and the sovereign. To find the gold value of silver it is as useless to compare silver with sterling as it would be to compare silver with, say, wheat or tin. Sterling fluctuates in gold just as those commodities do. The point raised herein does not appear to have been commented on in the debate in the Viceroy's Council.

I am not here discussing whether the new ratio which is the subject of controversy in India is a good one or not; the error in the reasoning is cardinal. For, if the sterling price of silver only had risen, which is what the Finance Minister is basing his legislation on, it would not have been necessary to alter the ratio of Rs. 15 to one sovereign, which has been in operation for 23 years, and the old exchange of 1s 4d gold per rupee could have been maintained instead of the present intended 2s gold.

There is one further consideration regarding this legislation. The sovereign which is current coin in India is good value throughout the world. Export is not prohibited. The Indian currency offices will give only Rs. 10 for a sovereign presented. The importer cannot buy with that Rs. 10 one sovereign, or even at present quite one pound sterling of exchange. But he can buy one sovereign's worth of goods anywhere, and it is not difficult to estimate how many sovereigns will be presented for exchange into Rs. 10 at present. The giving of one sovereign in exchange for Rs. 10 is not, of course, contemplated by the Government of India.—Yours, C. S. C.

London, September 28th, 1920.

ANGLO-POLISH TRADE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In its issue No. 4,016 of August 14th the *Economist* publishes correspondence from Warsaw dated July 22nd.

It may seem to you an old story to refer to a number so far back, but I am writing from Warsaw, and the particular number has just fallen into my hands. We have a great esteem here for such a responsible periodical as the *Economist*, but in this particular number it appears to me that your correspondent has been satisfied with a superficial examination of the mere outward phenomena of trade. The official statistics which he quotes are not up to date, and however much you examine them they cannot lead to very definite conclusions as to the situation in August and much less at the present time.

The general impression which your article leaves on me is that Poland has got into a state of commercial stagnation except in so far as Germany is concerned, and that the political leaders are absorbed in their dream of a powerful Poland.

As the writer of this is an agriculturist, he will show that this is not entirely the case by giving particulars regarding Polish agriculture which, thanks to the exceptional understanding by one of the largest concerns in London of the situation in Poland, already has begun to avail itself of Britain's help.

The following orders were placed in Britain, and four-fifths have been already delivered in Poland for the year 1920 :—14,500 tons nitrate of soda, 36,000 tons phosphate rock, 18,000 tons pyrites, 2,000 tons basic slag, 100 tons Manila binder twine, 2,150 tons harvesting machinery, harrows, and spare parts, 85 tons portable engines and threshers for threshing machines, 15 tons leather belting, and 3,500 tons tractors and ploughs; a total of 76,350 tons, to the value of £950,000.

The above quantities are, of course, very meagre, and would only cover one-tenth of the actual requirements of the forty million acres arable land in Poland, but as such they throw a completely new light on the conclusions of your correspondent when he expressed regret over the lifelessness of the commercial intercourse between Poland and England.

It may be added for the information of the *Economist* correspondent that during the same period the Polish agricultural circles exported to England 6,000 tons of sugar, and that they will this year supply double that quantity, besides oak and pine timber, starch, &c., in exchange for the goods bought in England.

I apologise for taking up so much of your valuable space, but I am sure any details of growing Anglo-Polish trade will be interesting to your readers.—I am, &c.,

(Signed) A. CHRZANOWSKI,
Director of the Warsaw Agricultural Syndicate.

Warsaw.

"SIR LEO'S TRIUMPH."

TO THE EDITOR OF THE ECONOMIST.

SIR,—I ask leave to say that the 17 lines in which my "Triumph of Nationalisation" are dismissed in your issue of September 25th pass the bounds of what is permissible even to an anonymous reviewer.

It is not true that my book "consists of a jumble of examples of the failure of private enterprise, and the alleged success of State enterprise," or that "Sir Leo's examples can best be described as little bits of fact carefully selected to bolster up a theory." If it were true, I should be a most dishonest advocate of a great cause.

As a matter of fact, the "examples" given in my book selected themselves. As to "private enterprise," Coal, Power, Railways, and Shipping selected themselves as the first essentials of British economy. I accordingly gave them due prominence, and it is ridiculous to tell your readers that authoritative treatment of them constitutes a "jumble." From Gladstone to Geddes, from Porter to Redmayne, my authorities are no fools.

As to State enterprise, the war, and not my "careful selection," picked out iron and steel, machinery, chemicals, shipping, brass, nickel, &c., as factors in which private enterprise had neglected our welfare, and as to which State action had to provide a remedy.

Moreover, the *general and aggregate* results of private enterprise on output and employment were measured in peace by the Census of 1907, and are stated on its authority in my book.

So I might pursue in detail the examination of your reviewer's charge. It is as baseless as it is discreditable to its author.

In the concluding three of his 17 lines your reviewer states that :—

"At the present moment every nationalised concern is run at a loss, which has to be made good out of the revenue derived from taxing private enterprise."

This statement, put into circulation in another quarter by Mr Harold Cox, is not true. For example, the wool deals of the Government are running at a very substantial profit. But no doubt, to use his own words, your reviewer imagines "that if he only says a thing often enough the world will believe it to be true." Perhaps it is not surprising that he dislikes my demonstration that nationalisation won the war.

All over the world nationalisation is marching on. It is a pity that men here should vainly oppose instead of wisely directing it.—Your obedient servant,

LEO CHIOZZA MONEY.

Royal Societies Club, St James's street, S.W.,

Books and Publications.

THE PEACE CONFERENCE.

"A History of the Peace Conference of Paris." Issued under the auspices of the Institute of International Affairs. Vol. II. London: Henry Frowde and Hodder and Stoughton. 42s net.

THE second volume of this history is devoted to the terms of the Treaty of Peace with Germany. If anyone will take the trouble to consider, before he opens the book, in what way exactly he would himself have wished this subject to be treated, he will begin to realise some of the difficulties that must have beset those who were responsible for organising and editing this work, and he will take perhaps a more charitable view of the result. We might, for example, have been given a simple exposition of the terms of peace. Another alternative was to assume that the text of the Treaty was well known or easily accessible to the reader, and to write simply a running commentary from chapter to chapter. Or again, a history of the Conference, written entirely by those who were present in Paris, might have attempted to give, not an analysis, but a synthesis, describing, step by step and stage by stage, how each chapter, section, or clause originated and took shape, and by what processes they reached their final form.

In point of fact, no editorial instructions would seem to have been issued at all to the different contributors, with the result that the book as a whole conforms to none of those general methods of approach, and yet contains examples of them all. In the two very short chapters on the League of Nations and Labour Legislation, the text of the Treaty is assumed, and we are given in the one case a commentary, and the other an historical account in outline of the different stages of growth. In the second chapter on Reparation we have little more than an exposition of the Treaty terms. Elsewhere we have a little of everything, and the consequence is that the book is extraordinarily difficult to read consecutively, or

to criticise except in detail. Like the Treaty itself, it is a compilation and not a unity; cracks and fissures are lightly varnished over, but in most cases they are still apparent. Sometimes (as in the two chapters on Reparation) there are definite discrepancies on matters of fact or opinion, which no attempt has been made to reconcile. And as to the tone and spirit that animated the different contributions no amount of editorial ingenuity would have availed to produce even the appearance of consistency. We find rancorous hostility to Germany in the military chapter, and a genuine attempt at understanding in the last chapter of all, dealing with "the new Germany." From self-righteous satisfaction (*passim*) we plunge in the financial chapters to the opposite extreme of scarcely veiled disgust and shame. In the chapter devoted to the principles of the peace a painstaking effort to be scrupulously fair results in an almost complete atrophy of judgment; elsewhere we are led forward from inadequate premisses to convenient conclusions by means of decorous half-truths and a purposeful (and not quite honest) manipulation of light and shade.

In spite of all these differences of tone and method, the reader receives an impression, which grows stronger as he proceeds, that the great majority of these contributors have at least one characteristic in common, namely, a very deliberate reticence. Always we feel that we are being told a good deal less than the whole truth. The evidence may be incontrovertible, so far as it goes, and conscientiously supported by references to chapter and verse; but it nearly all reads, none the less, as if it were evidence for the defence, and not a judicial summing up of the whole case.

The reason for this is not difficult to guess. For this history of the Conference of Paris is written on the assumption that posterity alone can pass judgment upon the Peace. Posterity will have the official documents; even, perhaps, one day, the minutes of the Council of Four. But documents are dry as dust, and terribly voluminous. Only a German historian—if the Reparation Commission permits such unproductive work—could be expected to cope with them. Posterity, therefore, will need guidance and help; this book is intended to supply the need, and to protect the judgment of posterity, by a measured statement to all appearances authoritative and complete, from being carried away, as the judgment of this generation has been carried away, by the terrific indictments which have been brought, in every kind of quarter, against the Peace of Paris.

Posterity will perhaps be convinced, and the Institute of International Affairs will have achieved their object. But present-day readers are beyond redemption. Those who know too much can fill in from their own experiences the gaps that are here dexterously concealed; those who know too little about the Peace still know too much about the spirit of our own times. They will not be impressed by the constant reiteration of the statement that "the main object of the Peace Treaty was to conclude an early and durable peace" (p. 129, p. 138, and *passim*). Early, forsooth! But then posterity will be less conscious of the price that we are paying for the postponement of a settlement until every detail had been provided for, down to the skull of an African sultan and the claim of Portugal to the Kianga triangle. It is even conceivable that those future generations for whom this book is written will not have heard of Shantung, and will therefore not look for the name (in vain) in the Index, or for any discussion of the problem in the text. Posterity may even be prepared to believe that in the days when the Peace of Paris was made the principles of the League of Nations could somehow be reconciled with a belief that "there is only one valid argument against universal military service" (p. 128), or with the statement that "if a purely defensive attitude [of the Allies against Germany] were intended, the line of the Rhine should have been held as long as possible from Alsace-Lorraine to the Dutch frontier," and that it would have been wiser to evacuate the Cologne bridgehead last of all, because it is such a good jumping-off place from which to bring a little "pressure" upon Germany, by the occupation of the Ruhr.

And yet this book should be read—and read carefully—not by posterity, but by the present generation. In 50 years' time it might tend to warp judgment and do some harm. To-day it may be of enormous service, not in forming, but in indirectly confirming and fortifying judgment of the Peace Settlement. For it successfully covers a wide field in considerable detail; it illustrates the mood and temper of those who were responsible for the drafting of the Treaty, and it contains a whole armoury of reliable facts which are not the less useful because they are buried in a mass of questionable comment. There is little danger that this comment will mislead a public which, after one year's experience, has already outgrown the Peace and outlived the spirit of the Peace settlement. If the actions of the Reparation Commission are ultimately made subject to the sanction of public opinion in the different Allied countries, it is of enormous importance to the world that public opinion on the Treaty should be not only definite but well informed. It is definite already, but only because the public succeeds, even on insufficient evidence, in arriving instinctively at conclusions which are in fact susceptible of detailed justification and proof. This history of the Conference of Paris provides, for anyone who reads it intelligently, ample evidence with which the opinion of the Peace that has become established in English-speaking countries can be first justified in detail, and eventually, we may believe, enforced.

BOOKS RECEIVED.

A History of the Peace Conference of Paris. Vol. III. Issued under the Auspices of the Institute of International Affairs. (London) Henry Frowde, Hodder and Stoughton. 42s net.

Rubber Producing Companies, 1920. Official Guide for Investors in Rubber Shares. (London) Offices of The Financial Times, Limited, 72 Coleman street, E.C. 2. 10s 6d net.

This is the eighth edition of this standard work on Rubber Companies compiled by the Mincing Lane Tea and Rubber Share Brokers Association, Limited. Full particulars of more than 600 companies are supplied, including various reconstructions and amalgamations, new issues of shares, and new companies formed since last issue.

The Pathology of Industrial Unrest. With some special references to the Engineering Industry. By D. A. Bremmer. (London) British Engineers' Association, 32 Victoria street, Westminster, S.W. 1. 3d.

A very interesting analysis of industrial conditions of the wage earners' attitude, laying stress on the need for an educational campaign.

Rio de Janeiro: Its Port, Commerce, Industry and Finance, and its Openings for British Enterprise. By George Marr, Secretary of the British Chamber of Commerce in Brazil. (Rio de Janiero) Offices of the British Chamber of Commerce.

The Dairy Industry of Canada. (Ottawa) King's Printer. 5 cents.

Obtainable from Trade Commissioner of the Canadian Government, 73, Basinghall street, E.C. 2.

Crop Reports and General Business Conditions for 1920. (Chicago) Continental and Commercial National Bank of Chicago.

The Nineteenth Century and After. October, 1920. (London) Constable and Co., Limited. 4s.

Income and Excess Profits Taxes. Income-Tax Guide, 1920. Edition revised. (London) Financial Times, Limited, 72 Coleman street, E.C. 2. 1s net.

This guide contains in a concise form particulars of the radical revision that has been made in the working of the income-tax system which renders all previous handbooks practically obsolete.

The Household Account Book of Sarah Fell of Swarthmoor Hall. Edited by Norman Penny, F.S.A. (Cambridge) University Press. 42s net.

Sarah Fell was the step-daughter of George Fox, the quaker. Her "Household Account Book," now printed for the first time, includes much beyond what its title would lead the reader to expect, for incidentally there are set down various sums received or spent on behalf of the local meetings of the Society of Friends.

A Cheechako in Alaska and Yukon. By Charlotte Cameron, O.B.E. With many illustrations. (London) T. Fisher Unwin, Limited. 25s.

Problems of Labour in Great Britain. (In Russian.) By S. P. Turin. (London) "Renaissance Publishers," 84-86 Chancery lane, W.C. 2. 2s net.

The Anglo-Swiss Review. No. 5. (Basle) Aeschengraben 6. 1s.

Dorman Wave Power Tools. The Transmission of Power by Waves Through Liquid. (Stafford) W. H. Dorman and Co., Limited.

The preface by Mr Walter Haddon, chairman of W. H. Dorman and Co., Limited, directs attention to the revolutionary character of "the theory of wave transmission of power."

The Case Against the Lloyd George Coalition. By Harold Storey. (London) George Allen and Unwin, Limited. 1s net.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

Ticket.	Account.
October 13.	October 14.

After going on cheerily enough for the first three days of the week, Stock Exchange markets experienced a sharp setback, both as regards business and prices, on Thursday morning, owing to the deadlock which arose in connection with the coal miners' negotiations. Postponement of the strike had been fully expected to mean that the differences would be composed, so the disappointment was the more acute when the miners took up an attitude which threatened a coal strike at the end of the week. In addition to this particular factor, there had been some little anticipation of a rise in the Bank rate, which played its part in keeping down prices of gilt-edged stocks, and of super-inducing caution on the part of those who contemplated investment in pre-ordinary stocks and shares. In spite of these two influences, however, there has been a fair amount of business doing, and optimism insisted upon looking for a way out of the industrial trouble without a stoppage actually occurring.

The Funding Loan is amongst the features of strength in the gilt-edged list. Upon quotation of the price ex dividend, a fresh volume of buying came into evidence, and part of the deduction of £1 7s 6d per cent. net was easily replaced. The new Corporation stocks are little more than steady, interest in them appearing to have ebbed for the time being. The War Loan will be ex dividend in about three weeks' time, and although the price receded with those of other gilt-edged stocks upon the more menacing strike situation, the market hardened up again. The idea of a rise this week in the Bank rate had received no support in the Consol market, where the flotation of the Norwegian Loan in the United States is held to be a reason for expecting that the 7 per cent. rate will be retained for at any rate some weeks longer.

All the recent excitement has evaporated from the market in French bonds, the Fours and Fives both going back substantially from the levels to which they were whirled up in anticipation of the bonds being available for application to the new French Loan at a favourable price. Norwegians have eased off a little, on the announcement of the new loan. Brazilians, Argentines, and Chilians have a heavy tendency, Russians are further depressed, Government and Municipal bonds alike, and the Japanese list shows irregularity. Peruvian bonds are better, the Corporation stocks and the Salt Loan all advancing.

Home Railways enjoyed a little support from the investing public during the earlier days of the week, but there was not sufficient backing in the movement to maintain prices, which quietly sagged on the latest demand of the men for more wages. Undergrounds are hardly affected by the coming into force of the increased fares on the various systems. In the market for Home Railway pre-ordinary issues, two or three of the debenture class are ½ to a point better, and preferences are left unchanged. Indian Railways show no improvement. Mexicans are still heavy, in company with Mexican Utility and Mexican Government bonds. Nitrate Railways hardened on the dividend announcements of 7s per share on ordinary and preferred. Brazilian Rails continue dull, owing to the rate of exchange, and in Argentine Rails what interest was excited by the dividend announcements last week appears to have worn off, and prices are slipping back again.

Raw rubber is distinctly higher, and this is said to be due to the hope of what will materialise as a result of the policy for restriction of output inaugurated by the Rubber Growers' Association. A good many of the leading shares rallied to some extent, and the less unfavourable outlook for the industry, in the light of production-curtailment policy, attracted a few buyers, mainly from the North. Oil shares have been boisterously active. Amongst the leading features Mexican Eagles stand out with a jump to 12⅝ bid as their best price of the week, optimism being fanned by renewed talk of a "bonus" issue of shares being made admost immediately. The whole of the market showed something approaching bullish enthusiasm, which was, however, severely tested by the hitch in the coal position, with a consequence that the full extent of the rise was by no means held. The insurance market, after going ahead strongly, came to something like a halt towards the end of the week, the rise evidently tempting a few sellers. Shipping shares are distinctly better, and a good dividend from the Cairn Lines attracted attention to the lower-priced varieties, which for some time past have been out of favour. Amongst Textiles, rumours of an early splitting and bonus scheme sent up Courtauids with a run, Listers keeping them company, but, in Courtaulds, a reaction occurred from the best price touched. Other textiles are somewhat subdued by the labour outlook in the spinning trade. Public interest has departed for the time being from Dunlops and from certain of the other industrials which lately were enjoying attention. Gordon Hotels went up smartly on unconfirmed rumours as to the possibility of Lyons assuming control, and another absorption rumour had a sharply favourable effect upon Direct Fish Supplies shares. African and Eastern rose from 3½ to 4¼ on publication of the details of the projected deal with Levers. Profit-takers came in at the higher figure, and there was a substantial drop. Brewery stocks are inclined to give way here and there, owing to a little nervousness apparently engendered by the prohibitionist campaign started in this country. Until Thursday, the iron, coal and steel group had been well maintained, and Welsh colliery shares showed a degree of strength which flattered hopes of an early peace in the trade. But with the later phase which developed in the coal trade, the prices of the shares, together with armaments, came down to some extent. Gloucester Wagons have gone ahead. Imperial Continental Gas gained 10 points in one day, but lost part of the rise. Other Gas stocks are uninteresting.

There is little to say about the Kaffir Circus, because public interest both here, in Paris, and at the Cape, is dormant. The price of gold keeps up well, without having any effect upon share prices. A few Rhodesians are better, Falcons rising with a rush, and De Beers improved in response to a very small amount of buying from France. The mining sensation of the week has been furnished by Esperanzas. Publication of a strike showing nearly 65 ounces of gold to the ton led to exciting scenes in the market, where the price was run up vigorously, although, of course, no one expected that such a find would turn out to be of any great extent. The Tin markets are quiet. Broken Hills gave way on an announcement of the new issue of shares to be made to proprietors at 45s, in the proportion of one new share for every four at present held. West Africans are a little better in a few cases. Rio Tintos were a good market until the announcement that no interim dividend will be paid this autumn. Russo-Asiatics went up a few pence for some reason which the market found difficult to fathom.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

† Amount subscribed to September 25, 1920.

To complete our record of new issues, company secretaries are requested to furnish us with copies of new prospectuses. Our readers can also assist by forwarding copies of prospectuses which may fall into their hands.

5-15 Year Treasury Bonds, repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. These are still on offer. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

London County Council.—Issue of £5,000,000 6 per cent. local bonds for housing. Registered bonds for £5 each or multiples thereof are obtainable for terms of 5, 10, or 15 years, at applicant's choice. Six per cent. interest and full repayment when due are guaranteed by the London County Council on the security of the County of London's rates. Interest payable each September 30th and March 31st. The money will be applied solely for the purpose of housing sihemes approved by the Government, and in particular to finance the housing schemes of the Metropolitan Borough Councils. Income-tax will not be deducted at source where the holding in any one name does not exceed £100. Trustees are authorised by the Trustee Act, 1893, to invest funds in these bonds unless expressly forbidden by the instrument (if any) creating the trust. Advertisements appearing in the daily papers state that £2,250,000 of these bonds have been issued. No mention is made in the prospectus as to a Stock Exchange quotation. It will be interesting to know how investors are to dispose of their holdings should the necessity arise.

Caldwell's Paper Mill Company, Limited.—Authorised capital £300,000 in ordinary shares of £1 each, of which the whole amount has been issued. Eight per cent. mortgage debentures have been issued for £250,000. This is an offer for sale on behalf of the London Investment Syndicate (1912), Limited, of 292,933 shares at par, of which directors and friends have agreed to apply for 120,000. The company was recently formed to acquire, as a going concern, the business of Caldwell and Co. (Paper Makers), Limited, of Inverkeithing, established in 1893, as from October 1, 1919. Surplus assets are valued at £617,483, but debentures have apparently not been deducted. Profits are given from 1918, but it should be observed that these are given before charging excess profits duty, income-tax, and corporation profits tax. The price receivable by the company from the London Investment Syndicate (1912), Limited, is 20s per share, less a commission of £19,500, out of which commission the London Investment Syndicate (1912), Limited, have agreed to pay all the expenses in connection with this offer for sale, including underwriting commission. The London Investment Syndicate (1912), Limited, have entered into various underwriting contracts at a commission of 4 per cent., and an overriding commission of 1 per cent. The paper-making industry is liable to severe fluctuations, and it is doubtful if future profits will be on such a generous scale. However, this is a reasonable offer in its class to investors who wish to obtain a holding in this speculative industry.

Loxley Brothers, Limited—Authorised capital £250,000, divided into 150,000 preference shares and 100,000 ordinary shares. This is an issue of 125,000 8 per cent. cumulative preference shares of £1 each at par. The fixed cumulative dividend is 8 per cent., and shareholders are entitled to an extra quarter of 1 per cent. for every 1 per cent. declared on ordinary shares after 10 per cent. has been paid, but not exceeding 10 per cent. on preference shares in all. The company has been formed to acquire printing works in London and Sheffield. Apparently the purchase price works out at £169,176, of which £87,493 is payable in shares and £81,683 in cash. Assets are valued at £169,176, and independent valuations are submitted. Profits of the combined businesses are given for the past three years. Goodwill is valued at £46,488. The estimated amount of preliminary expenses at £550 is low. The issue is underwritten at 6 per cent. Printing works have not always been successful in the past, but in this particular case the influence of the directors should ensure a steady supply of work. This is a reasonable proposition, subject to the usual industrial risks.

Morland and Impey, Limited.—Authorised capital £255,000, of which £130,970 has been issued. There are 150,000 7 per cent. cumulative preference shares of £1 each, 75,000 10 per cent. preferred ordinary shares of £1 each, and 600,000 deferred ordinary shares of 1s each. This is an issue of 75,000 preference, 25,000 preferred ordinary, and 100,000 deferred ordinary shares, the preferred ordinary being issued at a premium of 4s per share. Applicants for preference or preferred ordinary shares have the right to apply for an equal number of deferred ordinary shares. The company was formed in 1908 for the purpose of developing the Kalamazoo Loose Leaf patents. In 1912 it built a factory at Northfield, Birmingham, and owns 24 acres of freehold land. Including the present issues, the total issued capital will be £240,970. Against this there are net assets to the value of £241,884, goodwill being valued at £1,700. Profits are given from 1915. In the *Economist* for February 21, 1920 (on page 371) we referred to this undertaking. For those who are prepared to take the usual industrial risks these shares are not without attraction. It should not be overlooked, however, that dealings will be mainly on the Birmingham Stock Exchange.

John and James Tod and Son, Limited.—Authorised capital £200,000, divided into 100,000 8 per cent. cumulative preference shares of £1 each, and 200,000 ordinary shares of 10s each. Including the present issue, 80,000 preference shares and 40,000 ordinary shares have been issued. This is an issue at par of 29,320 preference shares. The company was formed in 1916 to acquire the business of John and James Tod and Sons, of Leith, wholesale grocers, established in 1798. All ordinary shares are held by directors. The prospectus states "that the company's free assets, after deducting all liabilities, largely exceed the sum (£80,000) to which the issued preference capital will amount after including the present issue." From the intending investor's standpoint, this cannot be considered a satisfactory statement, and a person would be ill advised to take an interest in a company on such meagre information. The auditors' certificate that "the average net profits of the company for the five years ended February 28, 1920," are sufficient to pay the year's dividend of 8 per cent. on a preference capital of £80,000 "nearly three times over," conveys rather more information, but lacks necessary detail. The shares have not been underwritten.

COMPANY MEETINGS, &c.

BOLCKOW, VAUGHAN, AND CO., LIMITED.

SATISFACTORY YEAR'S BUSINESS.
INCREASED PROFITS.
EXTENSION OF WORKS.
LABOUR AND TRANSPORT QUESTIONS.

The annual general meeting of Bolckow, Vaughan, and Co., Limited, was held on the 1st instant at the Midland Hotel, Manchester, Sir J. E. Johnson-Ferguson, Bt. (the chairman), presiding.

The Chairman said :—Ladies and gentlemen, we are to-day in the peculiar position of having to deal with the accounts of the years ending June 30, 1919, and June 30, 1920, and in the first instance our meeting is an adjournment of that held 12 months ago. I propose, therefore, to ask our secretary to read the notice convening the meeting adjourned from last year and the auditors' report on the 1919 accounts, and I will then formally move the two resolutions relating to the accounts of 1919. That will enable us to close the adjourned meeting, and I will then call on the assistant secretary to read the notice convening the meeting of 1920, and the auditors' report on those accounts, and having done so I will then go through the accounts of 1919 and 1920, explaining them to you in the usual way and dealing with the other matters in which you may be interested. That seems to me the simplest and most satisfactory way of bringing us back to the normal position, and I therefore now call on the assistant secretary to read the notice convening the adjourned meeting and the auditors' report on the accounts for 1919.

The notice having been read,

The Chairman continued :—I beg, therefore, formally now to move the following resolution :—"That the report and statement of accounts and the proceedings of the directors for the year ended June 30, 1919, be approved and adopted."

Major E. A. J. Johnson-Ferguson seconded the resolution, which was carried unanimously.

The Chairman, proceeding, said :—I will now move the next resolution, "That the further dividend of 8 per cent. paid to the members of the company in proportion to their shares in October, 1919, be the final dividend for the year ending June 30, 1919."

Mr Walter W. Storr seconded, and the motion was carried unanimously.

The Chairman.—That completes our meeting adjourned from September, 1919, and I will call on the secretary to read the notice convening the meeting for 1920, and the auditors' report on the accounts for that year.

The notice having been read,

The Chairman, continuing with the business of the 1920 meeting, said :—Ladies and gentlemen, we are now in the happy position of being able to present to you not only the balance-sheet of a year which was completed 15 months ago, but also the balance-sheet for the year ending June 30 last. Up to 1916 we were always able to hold our annual meeting and present the year's accounts within three months of the close of our financial year. The war, with its attendant legislation and taxation, rendered this impossible, and from 1916 onwards we have had to ask your indulgence and present to you accounts which, in fact, were 15 months old. Thanks to the energy of Mr Tongue, our auditor, and of Mr Read and Mr Rawson, the accounts for the year 1919 have had cleared out of them the serious questions pending between the Government and ourselves, and the figures we give you in that account represent the final results of their long negotiations. In the accounts for 1920 there are still many questions unsettled between ourselves and the Government, but our auditor assures me that in the figures presented to you we have made ample provision to cover any liability on our part, and we have not taken credit for any sum due to us, the exact amount of which has not actually been settled.

THE ACCOUNTS.

I will now go through these accounts and compare them with those of 1918—the last which you had before you—and give such explanations as are necessary to enable you fully to understand them. In 1918 our share capital stood at £3,218,380. Owing to the issue of the million fully-paid ordinary shares and the small balance of our previous shares which were unissued, our share capital rose in 1919 to £4,225,919, and is now £4,227,720. Of this share capital 1,860,900 shares are only 12s paid, the balance being fully-paid. There is, therefore, a reserve of £744,360 of uncalled capital, which is a very valuable asset should we at any time require to increase our loans or debentures. In 1918 our outstanding debentures were £555,600; in 1919 they were £472,000; and in 1920 they were £404,900; while since then a further 200,000 matured and were paid off, so that, in round figures, there is only about 200,000 of our old debentures outstanding. In 1918 we had in loans and deposits £113,442; in 1919 it was £61,214; and in 1920 it was £440,527. Now these loans and deposits are mainly sums placed in our hands for short periods by concerns in which we are either directly interested or in close alliance who happen at the moment to have considerable sums at their credit which they are not requiring in their own business, and they are often glad to lend them to us for a short period on terms which are an advantage to both us and themselves. The preference share dividend is a fixed charge, in which there is no variation.

The next item which appears in the balance-sheet of 1918 is "amounts owing to sundry creditors, including provision for war taxation," £1,331,181. In 1919 the provision for war taxation disappears: the various matters having been at length cleared up and the exact figures due to the Government having now been definitely settled, they are simply included in the usual way in sundry creditors, which, in 1919, stood at £880,069. In 1920 the figure of sundry creditors stands at £1,321,205, but there again we have had to include provision for taxation the figures of which not having been adjusted, but, as I have already told you, our auditor is quite satisfied that the figures as given above are perfectly safe to cover whatever liabilities may be found to be due by us. In 1918 we owed our bankers £695,251; in 1919 we had £42,462 at our credit, and in 1920 our account with our bankers was £87,724 at debit. The amount due on salaries and wages in 1918 was £63,668; in 1919 they were £76,273; and in 1920 £146,038; but, as I have explained to you before, those largely depend on the number of days between the last pay-day and the end of the month.

ROYALTIES.

The sum owing for royalties on minerals was in 1918 £40,188; in 1919 £39,393; and in 1920 £51,962. Unfortunately the royalty on one of the collieries held from what is practically a Government Department is on a sliding scale, dependent on the price of coal, and the present high price has very seriously increased the royalty which we have to pay at that colliery, and that accounts for the increase of something like £12,000 in the sum owing. The directors' and auditors' remuneration stood in 1918 at £7,000, and in 1919 and 1920 at £7,300, the additional sum on each occasion being the increase in the remuneration which you voted to your auditor. The next item which appears in the 1919 account, and not in that of either 1918 or 1920, is share premium account. You will recollect that we offered you a million fully-paid ordinary shares at the price of 22s 6d per share, the 2s 6d being premium. We have dealt with that premium by transferring £100,000 to the general reserve, and £26,167 to the fire insurance fund. We think that a proper appropriation of it and one which I have no doubt you will approve of. The next item is the accident and fire insurance reserves. In 1918 they stood at £73,133, in 1919 they are £167,342, and in 1920 £164,715. You may recollect that I told you some couple of years ago that we proposed to increase the sum placed to these various reserves. The result of that is shown by the increase in 1919, and the fact that there has been a small decrease in 1920 is due to the loss we experienced through fire at our basic slag works in August, 1919. Our repairs and renewals reserves in 1918 stood at £172,170; in 1919 they increased to £196,505; but in 1920 they have dropped to £100,948. The cause of this is that during the past year we have had many very heavy claims on these repairs arising out of the war, and the fact that we have been able to carry out those repairs without trenching on our general reserves shows the importance of maintaining these reserves at a large figure.

GENERAL RESERVE.

Now the next item is general reserve. At the commencement of 1918 it stood at £500,000. At our meeting last year we transferred to it £100,000 out of the profits of 1918, bringing it up to £600,000. If you cast your eye down the account for 1919 you will find that, in addition to the £100,000 from share premium, we have transferred out of the profits of the year a further £100,000, making the reserve fund at the close of 1919 £800,000, which is

the figure at which it appears in the accounts for 1919 and 1920.

The profit for the year 1918 was £591,059; in 1919 it was £589,735, while in 1920 it is £696,949, or, including the sums brought in at the beginning of the year from the preceding accounts, the total profit available for distribution was, in 1918, £733,617; in 1919, £746,901; and in 1920, £903,368. Of these we have to deduct the debenture interest and the preference share dividend for the year and the interim dividend paid in March, 1918, which left a balance available for distribution of £576,870 in 1919. Adding the sum of £100,000, which we transferred out of profits to the general reserve, there was a balance of £584,622, and in 1920 the balance to be dealt with is £712,945.

GROWTH OF CAPITAL ASSETS.

Now let me pass to the assets side of our balance-sheet. At the close of the year 1918 our capital assets, land, buildings, &c., stood at the figure of £4,443,974. The expenditure which we have debited to that account in 1919 is £141,723, and in 1920 £425,277. Now you must not suppose that the sum of £141,723 is anywhere near the amount which was expended that year; it is merely the balance left over from that actual expenditure after deducting therefrom the sums accruing through the adjustment of various outstanding claims. That does not apply to the figures of 1920, no such adjustment having yet been possible with respect to many other claims which are still unsettled for this year, and which will have to be dealt with in future accounts. Deducting from these figures the receipts from the sale of land, &c., and general depreciation, we see that while in 1918 our capital assets stood at £4,443,974, in 1919 they stood at £4,470,804, and in 1920 at £4,779,256. The investments stood in 1918 at £714,994, in 1919 at £792,474, and in 1920 at £583,535, the variation being merely due to variations in our holding of Government and the War Loans. In 1918 the value of our stocks stood at £1,381,907; in 1919 they rose to £1,435,056; while in 1920 they stand at £2,026,262. Of course, a certain part of that sum—£645,000—by which our stock in 1920 exceeds what it stood at in 1918, is due to the increased value of everything which we use and produce, but by far the largest part of this sum—and it is a most serious question—is the enormous amount of finished material which we have on hand waiting for transport. As I shall have to say something further about this in the latter part of my remarks, I will pass on to the next item. Royalties on coal and ironstone paid in advance are merely a small item, which fluctuates from year to year, and requires no comments.

SUNDRY DEBTORS.

In 1918 the amount owing to us by sundry debtors was £763,079; in 1919 it was £620,321, and the amount owing to us in 1920 is £1,023,982. Now the £260,000 by which the amounts owing to us in 1920 exceed what they were in 1918 is due in the first place to the increase in the actual amount of our business, and in the second place to the very large increase in the value of our products. The loans and advances have increased from £58,653 to £64,971 in 1919, and to £[illegible]789 in 1920. Those are mainly sums which we have advanced to our subsidiary concerns. That, I think, completes the various items of our balance-sheets.

THE DIVIDEND.

Let me pass to the way in which we have dealt with the balance of 1919, and the way in which we propose to deal with that of 1920. As I need hardly remind you, this time last year we paid you a dividend of 8 per cent., less income-tax, making, with the previous dividend, 12 per cent., and you have accepted that 8 per cent. as the final dividend for the year 1919. We transferred £100,000 out of our profits to the general reserve, which, with the £100,000 we took from the share premium account, brought up our general reserve fund to £800,000, and we carried forward towards this year £206,419. Now this year we recommend you, out of the balance of £712,945 available for distribution, to declare a final dividend for the year 1920 of 8 per cent., less income-tax, which, with the interim dividend of 4 per cent., which we paid you on March 31, gives 12 per cent. for the year. We recommend that £200,000 should be transferred to the general reserve, bringing it up to the round figure of one million sterling, and that the sum of £212,494 be carried forward to next year's account. The reserve fund of one million is equal to very nearly 25 per cent. of our total paid-up capital, and more than 25 per cent. of what is paid up on our ordinary shares. It is a satisfactory position, and one which our shareholders and the general public will, I feel sure, appreciate in estimating the value of your property.

DIFFICULTIES OF THE PAST YEAR.

The year which has just closed is the first completed year since the conclusion of peace, and even yet technically I suppose complete peace does not exist. It has been a trying year to every one. Shortage of material, difficulties of transport, and unrest in Labour have constituted 1920 a year which will long be remembered as one in which difficulties were almost overwhelming. The fact that we have been able to present you with what, I think, even the most exacting of you will admit is an excellent balance-sheet is largely due to the untiring and self-sacrificing energy of our staff, to whom I wish publicly to convey the thanks of our board and of our shareholders for what they have accomplished.

No material alteration has taken place at either our collieries or mines, but, considering the enormous increase in the railway carriage of bricks which came into operation on the first of this month, and which has led the Scotch makers, both of silica and other bricks, to threaten to close their works, if not actually to do so, I think it is fortunate that we have added the production of silica and firebricks to our subsidiary trades.

STEEL WORKS EXTENSIONS.

At our steel works the first part of our large extension has been completed and working for most of the year, and fully comes up in every way to our anticipations. The second part of the extension, our new plate mill, has been completed for some two or three months, and was working during the early part of July. Some of the furnaces in connection with it are at work, and the remainder will soon be completed. Since the middle of July, I am sorry to say that the new plate mill has been standing, not for any fault of the mill, but because of its very perfection, which has led certain of the men to go on strike. They claim to have a veto on and voice in the selection of the men who are to work this mill. It is the same claim in another form which has led to the lock-out of the electrical engineers, and it is a claim which neither we nor any other employer can admit. I hope, however, that wiser counsels will prevail, and that the men will not persist in trying to kill the goose which lays the golden egg.

DECLINE IN DEMAND FOR SHIPS.

Already the exceptional demand for ships has passed. Freights, which were up at 60s to 80s per ton, are down to 20s. On all hands you hear of shipowners trying to cancel orders they had placed for ships, and in many instances paying considerable sums as damages to get those orders cancelled. You have only to read the speeches which the chairman of the leading shipping companies have addressed to their shareholders during the last three months to learn the ground for such action. They tell their shareholders that the present cost of ships is such that ships built at present prices cannot in the future be made to pay. Until that cost is materially reduced the demand for ships will apparently fall off, and that must affect the demand for plates. Those who cannot produce them at the very lowest price possible will undoubtedly be obliged before long to close down their mills. Employers will not go on producing at a loss merely to find employment for men who resist the introduction of improved machinery or methods. It is true that the best modern plant involves labour-saving appliances. By that, and by increased output alone, can cost be reduced. Probably also in many cases it is opposed to old ideas or customs, but it is a well-known fact that the more cheaply an article can be produced, the more demand there is for it, and therefore the more employment there ultimately is. Nothing leads so soon to unemployment as the retention of old and out-of-date machinery or methods of production.

BASIC SLAG WORKS.

I reported to you at our meeting last year that in August, 1919, our basic slag works, which we had purchased from the Government at the beginning of the war, had been burnt down. I am glad to say that Mr Ritchie has been able to reconstruct them on much improved lines. They are now again fully going, and I think the fire, though it cost us £22,000, may be regarded as having been a blessing in disguise.

INEFFICIENCY OF RAILWAY SERVICE.

One of the most serious difficulties that we have had to contend with in the course of the year has been the inefficiency of the railway service, the result of which is reflected in the figures of our balance-sheet. On June 30th, when our books were closed, our stock of finished steel waiting to be despatched was 22,380 tons, worth considerably over half-a-million sterling; nine months before, that is at the end of October, 1919, the stock was 8,765 tons, or little more than one-third what it is now. Since then it has been steadily increasing month by month, until it stands at the present appalling figure. Not only does it lock up unnecessarily at least £500,000, but it seriously inconveniences our customers, and puts us to heavy expense in the handling of this stock.

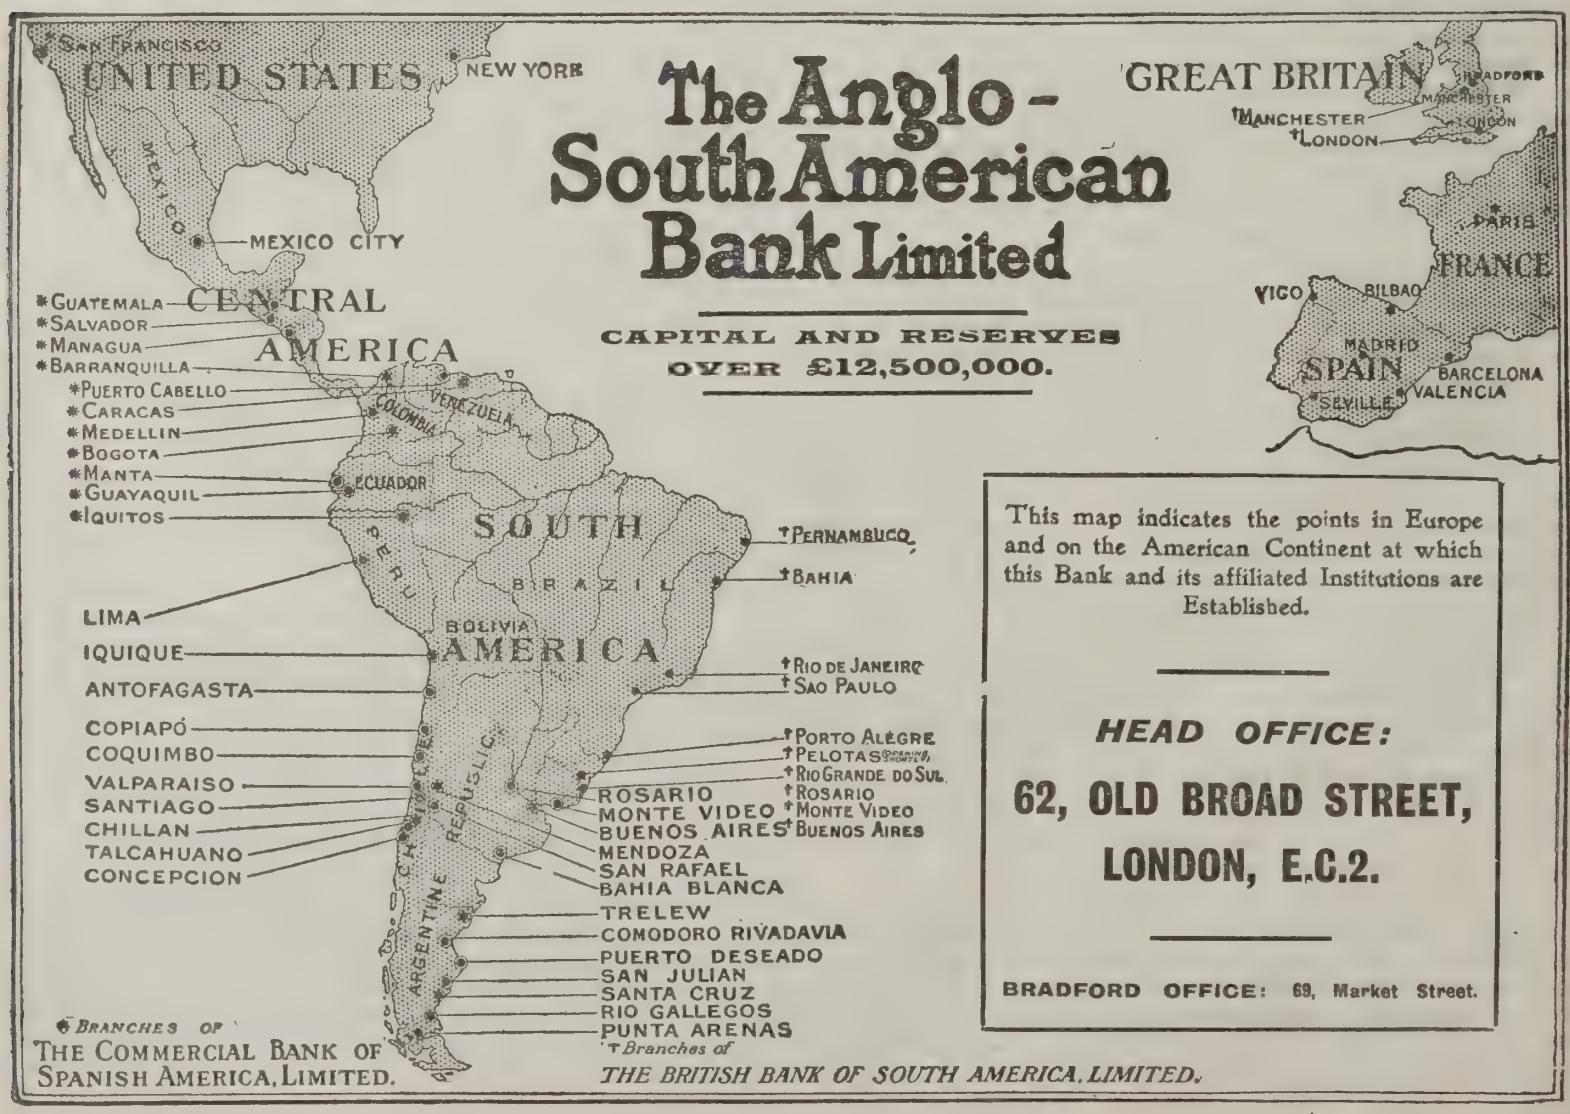
It is a very serious matter that during the last nine months, when we might reasonably have expected that the carriage facilities would have been steadily getting better, the railway companies, on whom we depend for moving the principal part of our finished material, should have shown themselves to be absolutely incapable of dealing with it. Whether it is the fault of an individual railway company or of the Ministry of Transport I have no means of judging, and therefore do not attempt to express an opinion, but if that is a specimen of the reconstruction under Government con-

trol of which we hear so much, all I can say is Heaven defend the country from it.

DARLINGTON ROLLING MILLS.

In 1916 I informed you that we had purchased the share capital of the Eston sheet works; we are entirely satisfied with the result of that purchase, which has formed a valuable outlet for some of our semi-finished products, and we are now engaged in extending those works. Following out the policy we pursued in purchasing the Eston sheet mills, we have during the past year acquired a controlling interest in the Darlington rolling mills. Not only will this concern be a valuable customer for our semi-finished products, but it will enable us to supply the requirements of our customers in many sections lighter than it suits our machinery to roll. I feel confident that we shall find these works a very valuable adjunct to our trade. Mr George Sisterson, the chairman of that company, has taken a seat on our board, and I am sure that his knowledge of that business and of the iron merchant business in which he is also engaged will be very valuable to us. In a letter to our secretary written about a month ago, one of our shareholders drew our attention to the alliance which had been effected by a leading concern in another part of the country, and asked the question whether we did not think it desirable to follow the same course. I have read very carefully, as I always do, the speech which the chairman of that company addressed to his shareholders at their recent annual meeting, and I have also examined their accounts, and I may tell our friend that I think our accounts which we have presented to you do not look any the worse for comparison with those of the company to which he alluded. But the view which I take—and I think the majority, at all events, of my colleagues agree with me on this matter—is that wherever real advantage by an alliance such as that to which our friend alluded can be secured we are prepared to consider it; if it can be carried out on such terms as we consider advantageous to the company we are prepared to carry it through, but we are not prepared to sacrifice the individuality of this concern, nor are we prepared to agree to an alliance on terms which we believe would not be advantageous to the interests of our shareholders. I should not have answered the inquiry so fully as this had not our friend specially asked that I would give him a clear statement of what my views on the subject are, and I felt that he was entitled to an answer. It may interest you to know that we have 10,625 shareholders, and that the average amount of their holding is £465.

THE THREATENED COAL STRIKE.



When we met you here last year the country was in the middle of the railway strike, and I think the members of our board deserve great credit that not a single member was absent from our meeting. This year we meet under the shadow of a coal strike—a strike which most people engaged in business have for a long time regarded as inevitable. While I do not think that at the present moment it is desirable that I should enter into a general discussion of the question, I think the following figures relating to our own concern may be interesting to you, and are certainly enlightening. In June, 1914, we employed at our collieries 8,844 men. They drew in wages during the year ending June 30, 1914, £735,236, or an average wage of £83 2s 8d per man. The total tonnage of coal raised at our pits was 2,320,410 tons, of which 2,137,832 tons was saleable coal, the difference being colliery consumption and workmen's coal. The total tonnage raised per man was 262.37 tons, and the wages cost was 6s 4.04d per ton. I will now give you the figures for the year ending June 30, 1920. The number of men employed at our collieries then was 9,487. The total wages earned were £1,589,036, or an average wage per man of £167 10s. The total tonnage of coal raised during the year was 1,616,233 tons, and the amount of saleable coal was 1,426,135 tons; the tonnage of coal raised per man was 170.36 tons, and the wage cost per ton was 19s 7.96d.

MINERS' WAGES AND PRODUCTION.

Let me summarise these figures. In the year just ending we had 643 more men employed in our collieries than in 1914. The total wages earned were £853,800 more than in 1914, or rather more than double, and the wages of the individual men were £84 7s 4d more, or rather more than double what they were in 1914. In 1920 they raised 704,177 tons less than they did in 1914, or little more than two-thirds of the tonnage raised in 1914, while the average output per man employed at the collieries was only 170.36, as compared with 262.37 tons. The wages cost of a ton of coal in 1920 was 19s 7.96d, as compared with 6s 4.04d in 1914. I may also remind you that in Durham, where our collieries are situated, the men have a free house, or, where that cannot be provided by the colliery company, an allowance for house rent, and in all cases a more than generous allowance of free coal. Further comment on these figures is, I think, unnecessary, but I think it is desirable that every shareholder in our company should have them before him at the present juncture.

TURNOVER LARGELY INCREASED.

There is one other piece of information which, though not arising out of our reports and balance-sheets, may be of interest to you. Our turnover—that is, the value of the goods we sold—in 1915 was £3,157,000, whereas in 1920 it has risen to £7,437,000, or very considerably more than double. During the last three years we have not made a single bad debt, and the total we have lost through bad debts during those six years only amounts to £2,894, a sum absolutely infinitesimal, when compared with the

total amount of our sales in that period. Bolckow's shareholders total 10,625, and the average amount of their holding is £465. That does away with the statement that we, at any rate, are a concern held by a few bloated plutocrats. The Chairman concluded by moving the adoption of the report and balance-sheet.

Captain the Hon. Roland D. Kitson seconded.

Mr E. Hamilton, of Saltburn-by-the-Sea, stated that he was the shareholder to whom the chairman had more particularly referred as having written to the secretary with regard to the combination movement. In his (Mr Hamilton's) aforesaid communication he mentioned that a great iron and steel company in the Midlands and South Wales was amalgamating, and that other great iron and steel companies (like the Blaenavon) were said to be on the verge of joining mergers, and despite the present strength of Bolckow's his view was that it might be strengthened still further by a combination under just and proper terms. Meanwhile he might say that he knew the industry intimately, especially as regards the Middlesbrough district, and he did not consider that their chairman had overrated Bolckow's strong position. Respecting the acquisition of the Darlington Rolling Mill Company by Bolckow's, how did the latter undertaking stand? In regard to the East Kent coalfield, he hoped something would be done, as he was a strong believer in that field, where he had seen the collieries and ironstone mines working. There was no place in the world where they could get coal and ironstone together with good shipping facilities combined like the East Kent coalfield.

Another shareholder asked why, with their various subsidiary and modern by-product plants, Bolckow's did not appear to be supplying an important article like benzol?

The Chairman, answering questions by Mr H. E. Hamilton and other shareholders, said there was no move at present in regard to Kent Coalfields. There was not the remotest truth in the story that any works of Bolckow's had been built on bad ground. The directors would be pleased to consider the question of holding shareholders' meetings alternately in Manchester and Middlesbrough. Mr Hamilton had been defending combination, and another shareholder complained that they could not get their benzol from Bolckow's any longer. The reason was because of combination. They had joined other benzol makers in a benzol combine, and it was only there that benzol could be now obtained.

The resolution was carried unanimously.

The Chairman moved a resolution recommending payment of a dividend of 12 per cent. per annum for the year on the ordinary shares.

Mr Illtyd Williams seconded, and the motion was carried unanimously.

On a resolution of the Chairman, seconded by Mr P. Smith, Mr Illtyd Williams, the Hon. Roland D. Kitson, and Mr George E. Sisterson were re-elected directors of the company.

Mr George Sisterson moved that the sum of £2,000 be placed at the disposal of the directors for the purpose of assisting religious, charitable, and other institutions situated in the neighbourhood of the various properties of the company.

The Hon. Henry D. McLaren, M.P., seconded the motion, which was carried unanimously.

Messrs Alfred Tongue and Co., Manchester, were re-elected auditors.

Mr John Greenwood moved a resolution thanking the directors, secretary, managers, and various officials of the company for their services.

Mr William Heyhurst seconded the resolution, which was carried with acclamation.

Mr Storr replied on behalf of the directors, and Mr George Ritchie on behalf of the staff.

A vote of thanks to the chairman for presiding, moved by Mr Hamilton, seconded by Mr John Bodden, was carried amid cheers.

The Chairman, responding, assured shareholders that he, along with his fellow-directors, would continue to do everything in his power for the great concern of Bolckow, Vaughan, and Co.

ROYAL BANK OF IRELAND.

BIG EXPANSION OF BUSINESS—A NEW CHAIRMAN.

The eighty-fourth annual ordinary general meeting of directors and shareholders of the Royal Bank of Ireland, Limited, was held, on the 24th ult., in the offices, Foster place, Dublin, Mr M. Barrington Jellett, J.P. (chairman), presiding.

The report submitted set out that the net profits of the bank for the year ended August 31, 1920, after making provision for all bad and doubtful debts, amounted to £48,292 18s 1d, which, with the amount brought forward from last year, £6,393 0s 6d, made £54,685 18s 7d. From this amount an interim dividend at the rate of 8 per cent. per annum, less tax, for the first six months of the year had been distributed, leaving a balance of £46,285 18s 7d. Of this amount the board had appropriated to reserve fund and officers' superannuation the sum of £31,003 1s 4d, leaving available a balance of £15,282 17s 3d, which it was recommended should be appropriated as follows, viz.: A further dividend at the rate of 8 per cent., amounting to £8,400, leaving a balance of £6,882 17s 3d to be carried forward to the credit of next year's account.

The report further stated that the directors regretted that Sir James Murphy had found it necessary to resign the chairmanship, but were pleased that he retained his seat on the board. Mr M. Barrington-Jellett had been elected chairman.

CHAIRMAN'S STATEMENT.

In moving the adoption of the report and statement of accounts, the Chairman said he much regretted that Mr John Edward Fottrell, a valued colleague, well known in commercial circles, had passed away since they last met, and they had co-opted Mr Jones, their popular secretary, to a seat on the board. He was sure they would all unanimously approve of what they had done. The report showed that the Royal Bank, although small, was alive and progressive. Deposits showed satisfactory increases, and the business with customers a large expansion. The reserve funds had been brought up to £80,000, thus still further strengthening the financial position of the bank, and this notwithstanding the very large increases they had made to the salaries and bonuses paid to the staff during the year. The success which had attended the opening of their new branches at Ranelagh and Dolphin's Barn had shown that the board's action had been fully justified, and they had every reason to believe that the business in these rising suburbs would expand. They had in contemplation the opening of one or two other branches in the near future.

INCREASING BUSINESS.

The more effectually to meet the discharge of the increasing business, the board had constituted a committee of themselves, consisting of Major Cusak, Mr Clive Brooks and himself, and had also appointed Mr Stanley and Mr Longworth, formerly managers at Cornmarket and Ranelagh, manager and sub-manager respectively at the head office. The result had proved eminently satisfactory, and the discharge of customers' business had been greatly facilitated.

The auditors had called the attention of the board to the increased work thrown upon them by the expansion of the bank's business, and they asked that their remuneration should be increased by 50 guineas each. In the board's opinion that was a reasonable amount, and they suggest that they should accede to their request, and that the increase should be retrospective for the past year.

DIRECTORS' WORTH.

In which connection the board desired to point out that their work, and especially that of the chairman and committee, had also greatly increased, and they suggested to the shareholders that £1,000 per annum should be added to the present remuneration of the directors, which was fixed in the year 1858, and that the sum should be voted to them in respect of last year's working.

In conclusion, he added that he looked forward with confidence to the future of the bank, and to the shareholders reaping before long the benefit of the conservative policy adopted by the board. He formally moved the adoption of the report.

Major Cusack, D.L., seconded the motion.

The Right Hon. Laurence Waldron said the report presented was one of the most satisfactory they had had for some time, and were it not for the depreciation in high-class securities they would have the old 10 per cent. dividend. He was voicing the opinions of the other shareholders when he said they were gratified with the results, and that they appreciated the care and attention which the affairs of the bank had received from the chairman. He was glad to see Sir James Murphy with them to give them the benefit of his wide experience. The shareholders had every reason to be pleased at the progress the bank was showing.

MORE BRANCHES.

Mr C. J. Reddy said the various items shown in the balance-sheet should be segregated. He joined with Mr Waldron in welcoming Sir James Murphy and Mr Jones on the board, and he agreed that the remuneration of the directors should have been increased long ago. He thought the board should be increased instead of bringing in a committee of officials. He thought that officials should be officials and not directors, and as such he was of the opinion that the board of directors should be increased and that people with natural tendencies should be brought in and not make it wholly conservative. They should keep going with the times, and besides, they had waiting at their doors a large volume of business which was going begging. There were many accounts—both deposit and current accounts—which they could get, and he thought his suggestion would help a great deal in getting these accounts. He also emphasised the necessity of having more branches throughout Ireland, and not confine their efforts to Dublin.

Mr David Telford also congratulated the directors on the report.

BOYCOTT OF BANKS.

The High Sheriff said he did not approve of the boycott of banks, and said the proper way to prevent the boycott of any bank in Dublin or Belfast was to prevent there being any reason for the bank being boycotted. They should accommodate themselves with the popular views.

Mr John Thompson said the shareholders, in his opinion, were getting a small return for their money.

The Chairman, in replying, said the policy the directors had adopted was, he thought, a wise one, and with a little patience there would be better results, and before long these would be shown. The suggestions made by Mr Reddy would receive consideration from the board; he was a good client of the bank, and anything he said they would be only too happy to consider.

On the motion of the Chairman, a dividend of 8 per cent. was declared, less income-tax, for the half-year ended August 31st last.

Sir Jas. Murphy, Bart., D.L., and Major Cusack, D.L., were re-elected directors, and Messrs Kevans and Sons, chartered accountants, auditors.

It was also decided that the directors' remuneration be increased to £3,000 per annum, free of income-tax.

THE SHEEPBRIDGE COAL AND IRON COMPANY, LIMITED.

CHAIRMAN ON THE COAL CONFERENCE.

POSITION OF THE COAL INDUSTRY.

QUESTION OF REDUCTION OF OUTPUT.

The fifty-sixth annual meeting of the Sheepbridge Coal and Iron Company, Limited, was held, on the 27th ultimo, at the Royal Victoria Hotel, Sheffield, Lord Aberconway (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said they met under happier circumstances than a good many people expected. Personally, he never expected that the coal strike would take place. He was always an optimist. It was not merely a question of wages. The movement, which was headed by the executive of the Miners' Federation—he supposed, rather, forced from behind the scenes—involved practically the whole of the financial situation of the country, and he thought that, having read the speeches that took place at the deputations to the Prime Minister and to Sir Robert Horne, they could not help feeling that the responsible leaders of the Miners' Federation had thoroughly grasped that aspect of the case, and it was a great source of gratification to all who were interested in the economic development of the country and the continuance of the prosperity of the working classes that the parties had at last met to settle their differences with every evidence of good feeling. He had been to some extent in touch with both sides, and he knew that there was no bitterness at all on the part of the men, and he was perfectly certain that he could speak for the owners that they, during these negotiations, would meet the leaders of the Miners' Federation with a very friendly feeling towards them.

PROBABLE DATUM LINE.

He expected that it would be found that the parties would settle a datum line of something like 240,000,000 tons, which was well below what the men could produce, and, in fact, had produced. The great difficulty, of course, would be to settle the proportion of increase of wages in relation to the increased general output over the country, but he had every confidence that the skilled men who had this matter in hand would be able to come to some satisfactory conclusion. The great thing needed in this country was increase of output. That lay at the foundation of everything, and that was a matter entirely in the hands of the men themselves.

REDUCTION OF OUTPUT.

Attempts had been made to suggest that coal-owners had themselves tried to reduce output. There was not a shadow of foundation for such a statement. Of course, the development of collieries had during the last few years been very much impeded, if not stopped, by the shortage of men, by the difficulty of getting materials, and, of course, also by the difficulty of getting capital. Because at a time when Socialist agitation was going on practically amounting to threats of confiscation, it was not at all likely that people would be willing to put their money into risky and speculative operations like collieries until there was a reasonable prospect of things settling down.

As to the increase of output, figures he could quote with regard to the Sheepbridge company were very significant. For the year 1914, before the war, the total output per man working at the face was 755 tons. In 1919 (after the war) the total output per man was only 668 tons; that was a falling off of one-sixth; but when they came to the present year, 1920, the output was only 561 tons, or something like 24 per cent. less than it was before the war. That was entirely an affair of the men at the face. It was a remarkable thing that the output during the last 12 months, which, as he had shown, dropped off so seriously, was accompanied by a rise in wages of very nearly one shilling. That entirely bore out the argument which Sir Robert Horne and the Prime Minister urged during the recent discussions, and what was true of Sheepbridge was to his knowledge true of nearly every other colliery in the country.

RESULTS OF COAL SHORTAGE.

They must not forget that they were very nearly 50,000,000 tons short of pre-war production. That affected the country in every possible way. It affected their foreign trade and food supplies, because every ship that used to take coal out to Argentina and various parts of the world brought back foodstuffs and raw materials, and the freight for the double voyage was not greater than the single voyage home now, with the result that the country got its food and raw materials at a much cheaper rate than it could get them to-day with no coal being sent abroad to relieve the situation. That, of course, affected the cost of living for the poorer classes. It restricted the output of ships, and that restricted the output of steel, and that, in turn, restricted the ouput of iron. The whole thing worked back to the output of coal in the home collieries, and that, he hoped, had now been understood by the leaders of the miners, and he hoped they would try and pull together with the coal-owners, not merely for the sake of higher profits for anybody, or for the sake of higher wages, but for the sake of the trade of the country as a whole.

THE ALLIES AND THE COAL QUESTION.

They owed something to their Allies, the French and the Italians, who got practically all their coal from this country, and at present were getting a very, very small quantity, and that at an enormous price. That, of course, was not conducive to international happy relations. What they all wanted was the greatest good of the greatest number, and he (Lord Aberconway) did think that the circumstances in which the conference was that day being held all pointed to a recognition of that fact by those responsible for the working of the coal trade.

He would turn to one or two points in connection with their own company. Of course, as the shareholders all knew, they were still under legislation, which strictly limited their profits to the pre-war standard, with certain allowances for increased capital.

As to their output, the total output of the Sheepbridge and its subsidiary companies amounted to about 2½ million tons; but this had been produced by a very much larger number of men.

With regard to developments, they were sinking to the lower seams at Glapwell.

WORKING COSTS AND THE QUESTION OF ABSENTEES.

The cost of working was very much greater than it was in 1914, the wage percentage, as well as the standard, having gone up enormously. Then they had had to meet a great increase in the cost of materials. Timber had gone up 300 per cent. greater than it was in 1914, rails 280 per cent., wire ropes 300 per cent., and so forth. There was a tremendous demand for their products, and full employment in the coal trade seemed to be assured for many years to come. He wished they had fewer absentees. It was very serious to find that in the year ended June, 1920, the absentees amounted to in some cases as much as 25 per cent. He need hardly point out that if the men would work and do their best there would be no shortage of coal for export.

As to ironstone, they had opened another mine at Roxby, in the Frodingham district.

A new modern furnace was being erected, and other developments were taking place at their iron works.

Cottages were being built as fast as possible, although it was a very expensive job. They hoped to make the cottages comfortable for the workmen.

BALANCE-SHEET ITEMS.

Turning to the balance-sheet, he explained that they were dealing with a larger share capital than in the previous year, involving a larger distribution for the same percentage of dividend. Sufficient provision had been made in the accounts to cover certain taxation questions still unsettled with the authorities. The profits were somewhat better this year owing to a better return from their investments and from the iron works.

Stocks were higher in value, and this, as well as the increase in trade debts, was due to the higher prices of all materials.

He thought they would agree with him that the finances of the company were in first-class order, and concluded by thanking the secretary and his staff for the manner in which the accounts were kept.

SHAREHOLDER'S QUESTION.

A Shareholder asked whether it was true that the decreased output was due to want of wagon facilities and other causes which had hindered the men working up to their full capacity. He also suggested that the miners should pay the same price for their coal as other people.

CHAIRMAN'S REPLY.

The Chairman replied that as to the wagons, there was, no doubt, during the war, a great shortage, which had, however, been

gradually overcome. No doubt there were always, in every pit, certain difficulties to contend with which could not be overcome at once, but he was quite sure that their management was doing everything possible to ensure rapid clearances and the biggest output.

With regard to miners' coal, that was a very old-established custom, and he was afraid that they could not deal with it. As to Mr Smillie, who had been referred to, they must not be too hard on him. Mr Smillie showed some of the instincts of a statesman at the finish of the negotiations. He played the game as he was entitled to do on behalf of the miners, but they must not forget that things might have been different if he had not thrown his influence into the right scale at the end.

The motion to adopt the report was seconded by the Right Hon. Sir Henry Norman, Bart., M.P., and carried unanimously.

The dividend recommended, making a total of 10 per cent. for the year, was approved, and Sir Henry Norman and Mr R. W. Fowler were re-elected as directors, and Messrs Alfred Tongue and Co., chartered accountants, of Manchester, were reappointed auditors.

The directors present, in addition to Lord Aberconway, were the Right Hon. Sir Henry Norman, Bart., M.P., Mr W. H. McConnel, Mr R. W. Fowler, Mr M. Deacon, Mr W. B. M. Jackson, together with the secretary, Mr T. E. Haslam.

EDWARD LLOYD, LIMITED.

CAPITALISATION OF RESERVES AND INCREASE IN PREFERENCE DIVIDEND APPROVED.

An extraordinary general meeting of Edward Lloyd, Limited, was held, on the 27th ult., at the Cannon street Hotel, London, for the purpose of passing resolutions to carry out the directors' proposals for the capitalisation of £600,000 of the reserves and undivided profits of the company and increasing the preference share dividend from 5½ to 7 per cent. per annum.

Mr Frank Lloyd (chairman and governing director of the company), who presided, said: Gentlemen,—Those of you who were present at the last annual meeting in July will remember that in my speech from the chair, a copy of which was addressed to all the shareholders on the register at that time, I told you that the directors had it in contemplation to recommend the capitalisation of £600,000 of the company's reserves and undivided profits. The meeting to-day is convened for the purpose of carrying out this proposal and passing other resolutions, as fully explained in the circular letter accompanying the notice convening the meeting.

So far as the capitalisation of profits is concerned, while this makes practically no difference to the position of the ordinary shareholders, inasmuch as the assets of the company will remain exactly the same, it considerably strengthens the position of the preference shareholders, because £600,000 of profits, two-thirds of which the ordinary shareholders might as matters now stand divide in dividend, will be capitalised in the form of share capital, and will consequently no longer be available for distribution. The effect, therefore, as far as preference shareholders are concerned, is to put behind them for all time £600,000 of additional assets as further security for their shares.

The advantage that the ordinary shareholder will reap is the advantage which the company itself obtains—namely, that its share capital in its balance-sheet will be brought into a nearer relation to the actual capital employed in the business, and in future the dividends which are declared will be declared on substantially the whole capital that is employed instead of only upon a part of that capital.

PREFERENCE SHAREHOLDERS' POSITION.

The resolutions provide not only for the capitalisation of these reserves, but also for the increase of the company's capital in the future, and for certain alterations in the articles of association. We were advised that these alterations could be made without the consent of the preference shareholders, under a decision of the Court of Appeal given some few years ago. At the same time, we considered that it would be hardly fair to the preference shareholders that the alterations proposed should be made without consideration of the preference shareholders' special interests. We therefore determined to recommend the ordinary shareholders to agree to an increase of 1½ per cent. per annum in the rate of dividend payable to the preference shareholders.

That the general body of the preference shareholders have greatly appreciated the consideration shown them by the ordinary shareholders is evident from the overwhelming number of proxies which have been received from preference shareholders in favour of the scheme. In some very few cases preference shareholders have complained that their rate of dividend was not still further increased. The only answer I can make to this is that 7 per cent. on what is practically a gilt-edged security—for there are no debentures or prior charges whatever in front of them—is a very good return on a 1911 issue with such a wide margin of security. I have no hesitation in saying that the only shareholders who have any possible ground for objecting to the scheme now proposed are the ordinary shareholders, inasmuch as they are asked to give up to the preference shareholders 1½ per cent. per annum on the amount of the preference shares, which comes to £10,125 per annum, as compensation for agreeing to something which we are advised can be done without their consent. However, as we anticipated, none of the ordinary shareholders have shown any inclination to grudge the preference shareholders this sensible improvement in their position.

EXCELLENT PROSPECTS.

Before submitting the resolution, I daresay you will like me to say a few words as to the future prospects of the business. I can only say that they are excellent in every way, and I look with confidence to still better results than we have attained in the past. We have the advantage of a very able, experienced, and enthusiastic staff, animated by that *esprit de corps* which counts for so much in the successful prosecution of big enterprises; we have the confidence and good will of all our customers—an asset of incalculable value—and, thanks to the conservative policy of the directors, we have sufficient working capital to carry us through the difficult financial period we have now entered upon.

I will now move the resolution, as set out in the notice convening this meeting, and after the resolution has been seconded, I shall be glad to reply to any questions that arise on the business before the meeting.

The motion was seconded by Mr Harry Lloyd, and carried unanimously, and the proposals were subsequently sanctioned and approved at separate meetings of the preference and ordinary shareholders.

A vote of thanks to the chairman terminated the proceedings.

RUBBER PLANTATIONS INVESTMENT TRUST, LIMITED.

CHAIRMAN'S EXHAUSTIVE REVIEW OF RUBBER AND TEA INDUSTRIES.

RESTRICTION OF TEA AND RUBBER OUTPUT FORESHADOWED.

GENERAL FINANCIAL AND ECONOMIC CONDITIONS.

The eleventh ordinary general meeting of the Rubber Plantations Investment Trust, Limited, was held on the 1st instant, at the Cannon street Hotel, Cannon street, London, Mr H. J. Welch presiding.

Mr Richard T. Bartley, A.C.A., representing the secretaries (Messrs Harrisons and Crosfield, Limited) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Ladies and gentlemen, in the unavoidable absence of our chairman, Mr George Croll, my colleagues have asked me to occupy the chair to-day. Mr Croll is suffering from overwork, and has been ordered a rest, and I am sure you will all share the satisfaction of the board in hearing that he is making good progress towards complete recovery.

The accounts before you show a net profit on the year's working of £174,921, and the total amount standing to the credit of profit and loss account is £178,221 subject to Nederlands Indies War Tax (if any). Out of this sum the directors recommend that a dividend of 6 per cent. (less tax) be paid, and there will remain a sum of £106,470 to be carried forward.

CAPITAL AND LIABILITIES.

Before dealing further with the profit and loss account, may I be permitted to direct your attention to certain items on the balance-sheet? In the first place, you will notice that the issued capital of the company as at March 31, 1920, has been increased to £1,494,809, due to the fact that during the year 84,868 shares have been allotted in respect of options exercised.

The majority of shareholders, who made deposits with the company in May, 1918, have now converted such deposits into shares as from April 1st last; 265,265 shares have been allotted in this respect, leaving only £570 of the loan outstanding.

Our issued capital was thereby raised to £1,760,074.

RESULTS OF RECENT ISSUE.

Last month the board decided that it would be in the interests of the trust to issue the remainder of its nominal capital, and accordingly 239,356 shares were offered for subscription by the shareholders at par. The issue was largely oversubscribed. About 9,000 shares have been reserved to meet applications from foreign members, and from the balance of shareholders who made deposits in 1918, and when these have all been allotted, the authorised and issued capital of the company will amount to £2,000,000.

The reserve remains at £500,000.

Temporary loans from our bankers amounted at March 31st last to £30,051. This sum has now been repaid.

INVESTMENTS AND PROPERTIES.

On the assets side of the balance-sheet, investments in shares, debentures and options (less the credit to realisation account) stand at £635,702, being an increase of £20,054.

Sales of investments realised £152,981, and showed a surplus over cost of £72,187, which has been taken to realisation account.

At March 31st last a valuation of our investments in shares, debentures and options was made by the company's brokers, Messrs. Laurence, Sons and Gardner, and this valuation showed a surplus over the amount at which they stood in the balance-sheet of £710,691 as compared with £428,327 a year ago. The position taken out yesterday shows a surplus of £397,520, being a decrease on the March 31st figure of £313,171.

The expenditure upon the purchase and development of properties (including working capital) now stands at £1,715,636, being an increase of £165,410. This increase is represented by expenditure on the immature areas, buildings and machinery, and by the purchase of new interests in land in Sumatra and in Malaya.

Loans receivable amounted at the date of the balance-sheet to £143,277, being a decrease of £166,855, as compared with the previous year. With small exceptions, these loans are advances to companies in which we are largely interested, and are well secured.

It is anticipated that the average net cost to the trust of the acreage represented by its investments and properties at March 31, 1920, is not likely to exceed £63 per planted acre when in full bearing, after allowing for the amount standing in the balance-sheet to the credit of reserve account, but without making any allowance for the value of the reserve lands held in connection with the company's plantations.

PROFIT AND LOSS ACCOUNT.

Turning to the profit and loss account, the profit shown on produce from the company's estates amounting to £151,066 compares with a loss of £106,620 for the previous year.

This year's figure includes, however, a profit of £32,364 on the valuation of the balance of our 1917 and 1918 tea crops, which you will remember had been shipped to America and Canada owing to importation into the United Kingdom of foreign-grown teas having been prohibited.

Dividends, interest, &c., amount this year to £58,383 (net), as against £29,161 last year. Allowing for income-tax deducted on payment, the amount received from these sources was equal to about 5 per cent. upon our total issued capital at March 31st last.

PLANTATIONS.

I will now deal with the plantations owned exclusively by the trust, all of which I personally visited in December and February last during my recent tour through the East. I found them all in good condition, and well managed. They have been planned and equipped on first-class lines, and are very well and efficiently maintained.

SOUTH INDIAN PROPERTY.

Our South Indian property continues in excellent condition, and the output of both our products has increased. The tea and rubber both show satisfactory profits. New clearings have been commenced during the current year, 100 acres for rubber and 35 acres for tea.

SUMATRA TEA PROPERTIES.

From our Sumatra tea properties, during the calendar year 1919, we harvested 6,056,544 lbs, which was an increase of 551,062 lbs over the previous year.

The cost of production free on board at port of shipment (including provision for commission to staff, &c., but excluding loss on exchange) was 9.90d per lb, as against 8.14d. The loss on exchange works out at .59d per lb, and the loss on rice at 1¼d per lb. The crop realised a net average price of 1s. 0.96d.

The actual profit on the 1919 tea crop was £65,295.

CROP ESTIMATES.

The estimated crop for the calendar year 1920 is 7,000,000 lbs, and to the end of August 4,628,489 lbs had been harvested. Unfortunately, however, the fall in the selling price of tea combined with the loss on exchange and upon the supply of rice to our labour in Sumatra, will cause us a considerable loss on the tea produced during the current year.

With regard to our loss on rice, the Dutch Government early in the year insisted upon our ensuring supplies for 12 months ahead, and at a time when the price was at its highest. Consequently our loss on rice will be equivalent to about 3d per lb, and but for this we should have been anticipating a profit instead of a loss on our tea this year.

Our total acreage under tea in Sumatra at December 31st was 9,453 acres. The greater part of this acreage is not yet in full bearing, notwithstanding which the average yield per acre over the area in bearing was 778, as against 761 lbs last year.

SUMATRA RUBBER PLANTATIONS.

I will now turn to the Sumatra Rubber Properties. The planted acreage remains unaltered at 3,013 acres. The crop harvested during 1919 was 1,013,727 lbs, against 500,595 lbs in the previous year. The yield per acre was 379, as against 355 lbs last year. The net price realised was 1s 10.30d per lb and the f.o.b. cost (including loss on exchange) was 11.99d per lb.

The total amount of £1,715,636 which is shown by the balance-sheet to be invested in our properties and in working capital therefor, is represented by approximately 11,098 acres of tea planted and in course of planting, 4,084 acres of rubber planted and in course of planting, and 83.630 acres of reserve land.

RESERVE LANDS.

You will notice that our reserve lands have been increased during the year by 43,698 acres; this increase is represented for the most part by the purchases of interests in large tracts of first-class land in Sumatra on extremely favourable terms.

THANKS TO STAFF.

I should like here to express our cordial appreciation of the valuable services during the year of our able visiting agent, Mr Victor Ris, our indefatigable general manager, Mr Slotemaker, and of our various estate managers and members of staff in Sumatra and Southern India.

DIRECTORS' REMUNERATION.

The directors are submitting for your approval certain alterations in the method of calculating the directors' remuneration. It is proposed that the existing nominal fixed fees should be increased, but in place of 10 per cent. of the profits distributed as dividend in any year, 2½ per cent. should be substituted. The directors consider the proposed alterations, if adopted, will prove a valuable concession to the company, and provide a more equitable basis for their future remuneration.

THE TEA INDUSTRY.

With your permission, I now propose to give you a résumé of the recent course of events in the tea industry.

Prices rose rapidly in the early autumn of 1919, but towards the end of that year tea was shipped in abnormal quantities, the market became flooded, and prices fell.

STOCKS OF TEA IN THE U.K.

The quantities of tea upon which duty payments were made in the United Kingdom continued on a very large scale until the end of October, but subsequently they showed a decline, falling from an average of 36½ million lbs between April and September, 1919, to 30¾ million lbs between April and August, 1920.

The stock of tea in bond in the United Kingdom, as shown by the Board of Trade returns, rose rapidly during the last four months of 1919, and at the close of the year it stood at the unprecedented figure of 226 million lbs. This compares with 135 million lbs at the end of 1918 and 138 million at the end of 1913.

The returns show that at the end of August last the stock amounted to 222½ million lbs, against 133 million lbs and 82 million lbs in the corresponding months of 1919 and 1913.

At that date there were, in addition, considerable quantities in London and other ports awaiting allocation to bonded warehouses.

There are also large stocks in Northern India, which have accumulated as a consequence of the efforts to retard shipments.

TEA PRICES COMPARED.

The following comparison of prices in London public sale is instructive: —

	Early November, 1919.		End September, 1920.
	s d		d
Average of Indian tea	1 9⅝	....	10½
Common Indian tea	1 6½	....	4¼

The decline in prices has been most marked in the case of the commonest kinds of tea, which have been sold in public sale at prices that did not even cover the shipping expenses and landing and selling charges.

Re-exports from this country during the year have been of reduced dimensions.

The market in Holland has been considerably over-supplied, and the demand from France has also been very small.

Another feature which has tended to depress the market has been the growing financial stringency.

RESTRICTION OF OUTPUT ADVOCATED.

It will be apparent to all that as tea generally is being marketed below the cost of production, and the loss involved on the lower grades is exceedingly heavy, it is necessary that production should be generally curtailed until such time as the abnormal stocks existing have been reduced, and the prices brought up to a level which will at least cover the cost of production. Whilst the efforts to secure concerted action to curtail production have not yet matured, fortunately there is now a prospect that they will succeed.

It perhaps should be pointed out that an effective scheme for the reduction of output is as much in the consumer's interests as it is in that of the producer. If continuity of supply is to be ensured, the producer must at least cover his cost of production

until, with a return of normal conditions, he is able to earn a reasonable profit on his produce.

Whilst it will be difficult to make a large reduction during 1920, by next year, provided the proposals to reduce outputs by about 20 per cent. are generally adhered to by the producers, the reductions should rapidly tend to stabilise conditions and prepare the way for the reduction of stocks and a recovery in prices to an economic level.

Producers will appreciate that by keeping down stocks the restrictions will tend to maintain the price of tea for two or three years to come at a reasonably remunerative price.

I sincerely hope that, as a result of the efforts which are being made, successful concerted action to restrict production will promptly be taken in India, Ceylon, and the Dutch East Indies, and that such restriction will be continued until stocks and prices justify its termination.

TEA CONSUMPTION.

There are one or two things of a more hopeful nature in relation to tea to which I should like to draw your attention.

With regard to home consumption, taking the duty payments even during the past five months of this year as an indication, we arrive at an annual consumption of 369 million lbs as compared with 305 million lbs in 1913.

The Board of Trade returns for last year give the amount entered for home consumption at 388 million lbs. We think, therefore, the increase of home consumption over 1913 can be placed at fully 25 per cent.

Another satisfactory feature is the growing consumption of tea in India, which it is estimated has now reached 50 million lbs, whereas in 1914 it did not exceed about 20 million lbs.

RUSSIA AND TEA INDUSTRY.

I should like also to remind you that the actual shipments of all kinds of tea from all countries to Russia in 1913 amounted to 191,000,000 lbs. With such a large consuming country out of the market for three years it is, indeed, remarkable that the world's crops have been absorbed as successfully as has been the case. If that country were again in a position to resume buying on anything approaching the pre-war scale, the effect on prices would be very considerable.

We are convinced, therefore, that when economic conditions are restored throughout the world we shall rapidly see the world's demand for tea overtaking and passing the world's production.

THE RUBBER INDUSTRY.

With regard to rubber, from the best information now available it would appear that the total area under plantation rubber at December 31, 1919, was 3,200,000 acres, of which about 2,210,000 acres were in bearing. Particulars of areas under large holdings are still incomplete, while that for small native holdings is very scanty indeed.

On the information available, however, it does not appear probable that the estimate which was given at last year's meeting of the potential output in 1926 of 500,000 tons of plantation rubber will be exceeded, unless the present general average produced per planted acre in bearing can be increased.

Turning now to the present position of rubber, the high hopes which were almost universally held at the end of last year have not been fulfilled. These hopes were doubtless stimulated by the remarkable manner in which the whole of the 1919 output, together with the large accumulations of some 50,000 tons in the East at the end of 1918, was absorbed. Over 390,000 tons were shipped from the various producing countries in 1919, and of this quantity 350,000 tons came from the East.

RUBBER GROWERS' ASSOCIATION CIRCULAR.

The Rubber Growers' Association has recently sent to its members a circular (to which wide publicity has been given) asking them to agree to restrict their outputs to the extent of 25 per cent. In that circular they have dealt fully with the causes which have brought about the present position, and there is, therefore, little need to refer to them here.

REASONS FOR RESTRICTION.

The kernel of the whole matter is this—that stocks of rubber have reached an abnormal height, and for some time the price has been steadily falling. From the statistics and estimates which accompany the circular of the Rubber Growers' Association, it appears that if there is no restriction of output there may exist at the end of this year accumulations of rubber of between 35,000 tons and 40,000 tons, in addition to the normal stocks held by the producing and consuming countries. Estimates of the future course of trade and the consuming power of the various nations are always difficult and dangerous, and at the present time are especially so. But the existing large stocks and the fall in prices are obvious facts which call for prompt combined action by the producers.

How long the proposed restriction will be necessary depends upon the course of events.

It will, however, be appreciated that the effect of preventing an additional inflation of stocks will not only influence the price in the year of restriction, but in subsequent years also. Further, by restriction bark is conserved and the capital value of the trees improved.

AMERICA AND THE CONSUMPTION OF RUBBER.

As you are aware, the American automobile industry is the most important factor in settling the price of raw rubber. Seventy per cent. of the world's output in 1919 was absorbed by America, and of this proportion it has been estimated that about three-fifths was used in the motor industry. During 1919, 2,000,000 motor-cars and trucks were built in America, and the total number of automobiles registered there at the end of the year had reached the colossal figure of 7,550,000, of which 6,800,000 were cars and the remainder motor lorries. America has thus one automobile to every 14 of her population, while the proportion for the United Kingdom is estimated to be one to every 110.

The high consumption of rubber, and the number of cars per head of the population of America, compared with the other countries of the world, suggest that a huge potential demand exists in these other countries far in excess of their present consumption.

During 1919, Great Britain, France, Italy, and Japan took 84,000 tons of raw rubber, but at present it is estimated their total requirements this year will not exceed 56,000 tons. Had the demand for these countries alone during the present year kept even at the level of the demand of last, the price of the commodity to-day would doubtless have been much more satisfactory.

NEW USES FOR RUBBER—£5,000 PRIZE SCHEME.

I have been asked to call your attention to the "Prize" scheme initiated by the Rubber Growers' Association for ideas and suggestions which will extend present uses and encourage new uses for rubber. The increase of the consumption of the product is naturally of prime importance to all those interested in rubber-producing companies, and the scheme does not therefore need any recommendation. The prizes offered in this connection amount in value to £5,000, and the conditions governing the offer can be obtained from the secretary of the Rubber Growers' Association.

GENERAL, FINANCIAL, AND ECONOMICAL CONDITIONS.

Before closing, perhaps you will permit me to refer to the general financial and economic conditions prevailing throughout the world, as the tea and rubber position and prospects are inextricably bound up with them. In spite of Great Britain's extensive floating foreign debts of over 1,000 millions sterling, it is generally conceded that, from a purely national point of view, we are in a better financial and economic position than our European Allies or our late enemies; and were it not for the derangement of their finances and industries, there is little doubt that, with the combined efforts of all classes, we could surmount our own financial and economic difficulties. But this war has shown how closely the interests of the different nations are knit together, and that the sufferings and misfortunes of a great war are shared by the victorious and neutral nations as well as by the vanquished. Large balances of export and import trade exist in favour of or against the various nations, causing instability of and differences in the exchange values, for the amounts and fluctuations of which there are no precedents. This makes international trade very difficult. Whilst half the world cannot afford to buy from other nations any but the barest necessities, the trade of all must suffer. It is consequently essential in the interests of all nations (whether victors, vanquished, or neutrals) that means should be found to re-establish the international financial position upon a firm basis, and to stabilise the various exchanges. The financial and trading interests of the whole world, therefore, await anxiously the proposals of the International Conference now sitting at Brussels for the solution of the financial problems from which all are suffering, and which not only seriously hamper foreign trade, but are a material cause of the continuing increase of the cost of living, of money, and of credit.

THE WORLD'S PRODUCTION AND REQUIREMENTS.

No one believes that the present world production of goods equals the world's requirements. The destruction of assets during the war must be made good, and there is a general shortage of necessaries. Yet we are threatened with a trade slump which is almost universal.

The explanation is partly to be found in the international financial difficulties to which I have referred, but also in a great measure in the continued internal troubles of various kinds, the general labour unrest, and the Government and private extravagance which have followed the war.

The effect of these latter on trade and upon national reconstruction cannot be over-emphasised. Confidence—upon which trade and credit so largely depend—is shaken, with the result that traders' stocks are reduced, orders are minimised, and credit generally is restricted.

The fundamental conditions of national recovery and of the improvement of standards of living are *Peace, greater production*, and *national and personal economy*. In my opinion, if the British people will appreciate and act upon this simple truth, the country's recovery is assured.

The foreign trade of the world promises enormous expansion over pre-war quantities. Everywhere in the East I was told by experienced men of business that people want British goods and prefer British methods. Never before, I believe, has Britain's commercial prestige stood so high, or her potential commercial possibilities been greater. We have only to work hard, to economise and pull together, and there is nothing to prevent the nation achieving a world-position in commerce such as was never even dreamed of in pre-war days.

TRUST'S POSITION REVIEWED.

To return to our own immediate affairs, for the five years 1910 to 1914 the Trust paid dividends averaging 12 per cent. per annum, and, taking the comparatively small dividends paid since 1914 into account, the dividends for the last 10 years average 7½ per cent. per annum.

Since 1914, also, over 500,000 shares have been issued to the shareholders at par, and these issues—taking the break-up value only of the Trust shares into account—represent substantial bonuses to the great majority of the shareholders who availed themselves of the opportunities to subscribe.

Taking the valuation of our properties at cost, our investments at yesterday's valuation, and after deducting all liabilities, the balance-sheet shows a surplus over capital issued of 12s per share.

Further, the financial position of the Trust has never in recent years been sounder or easier than it is to-day.

The war and post-war conditions have unfortunately caused a reduction of our dividends, but the intrinsic value of the company's assets has not been diminished, and as, owing to the rise in the cost of material and labour, areas of rubber or tea cannot in future be planted and equipped at anything like the average pre-war cost, the capital value of our various interests should be maintained, if not increased.

We are confident that the existing conditions affecting our dividends will not be permanent, and equally confident that the future will demonstrate that the Trust holds interests of a value far in excess of its subscribed capital, the dividend-earning power of which will ultimately adequately compensate us for these leaner years.

With your permission, gentlemen, I will now move: "That the balance-sheet made up as at March 31, 1920, and the directors' report be received and adopted." I will ask Mr Hamilton kindly to second that resolution, and after he has done so we shall be glad to listen to any comments or questions that shareholders may desire to make or to put to us.

Mr E. L. Hamilton seconded the resolution, which was carried unanimously.

The Chairman: I now beg to move the following resolution—namely: "That a dividend of 6 per cent. in respect of the year ended March 31, 1920, as recommended in the report be paid, less tax."

Mr H. W. Morrison seconded the motion, which was unanimously approved.

Mr C. Heath Clark: Ladies and Gentlemen,—It is my pleasure to propose to you that Mr W. R. Hoare and Mr W. Megginson be reappointed directors of the company.

The motion was seconded by Mr Morrison and approved.

Mr Winchester: Mr Chairman, Ladies and Gentlemen,—I have pleasure in moving the following resolution: "That the auditors' fee for the year ended March 31, 1920, be fixed at 300 guineas, and that Messrs Ford, Rhodes and Ford be appointed auditors for the year ending March 31, 1921, at the same fee."

The motion was seconded by Mr Hugh Doherty, and carried.

DIRECTORS' REMUNERATION.

The Chairman: I now beg to move the resolution which relates to the remuneration of the directors. It is set out in the notice convening the meeting, and you have had it explained to you. The effect of it is no doubt understood by all present at this meeting. I will therefore formally propose that the articles of association be altered in manner following, namely:—

That Article 90 be amended by substituting the words:—

"90. As from the 1st day of April, 1920, the directors shall be paid out of the funds of the company by way of remuneration for their services at the rate of £500 per annum for each director (other than the chairman), and at the rate of £1,000 per annum for the chairman, and the directors shall also be entitled, by way of further remuneration, to such a sum as will be equal to 2½ per cent. of the profits distributed as dividend in any year,"

For the words:—

"90. The directors shall be paid out of the funds of the company by way of remuneration for their services at the rate of £100 per annum for each director (other than the chairman), and at the rate of £200 per annum for the chairman, and shall also be entitled by way of additional remuneration to a sum equal to 10 per cent. of the profits distributed as dividend in any year."

Mr Hoare seconded the motion.

Mr Hepburn: Mr Chairman, if I may, I should like to make a comment on this proposal. Personally, I regard it as a self-denying ordinance on the part of the board, for which the shareholders ought to be very grateful.

The resolution was then put to the meeting and declared carried by the requisite majority.

A vote of thanks to the chairman terminated the proceedings.

GOVERNMENT RETURNS.

† Rates lowered ½% on Jan. 2, 1918, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ½% on Nov. 6, 1919, and 1% to 5% on April 15, 1920. ‖ Lowered from 3½% to 3% on June 5, 1918, but was raised to 3½% on July 31, 1919, to 3¾% on Oct. 6, 1919, to 4¼% on Nov. 6, 1919, and 5½% on April 15, 1920. * Changed from 4¾% to 4% on Dec. 27, 1917, and from 4% to 3½% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 15, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4½% to 5½%, and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months' Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

Total value of imports of gold.....	620,085	Total declared value of exports registered in the week	4,339,510

Messrs Samuel Montagu and Co. write on September 30th as follows:—"Gold: A fair amount of gold came into the market, and was taken for America and India. It is reported from New York that $24,750,000 in gold has arrived at that city from London. The circular of the Gold Producers of Australia reports an average sale price for July of £5 13s 11d, as against £5 6s 6d ruling in London. This might have arisen partially from the fact that sales happened to be made upon specially favourable days, but on the whole it indicates the excellence of the Eastern markets which happen to be close at hand. Silver: Uncertainty as to the outcome of labour troubles here is bound to be reflected heavily in the American exchange, and this may prove a somewhat steadying influence upon the market. In the circumstances the outlook is rather obscure. Continental sales, which have been on a fair scale, are inclined to diminish. At a lower level of prices there would seem to be a prospect of some considerable China support. We hear that Mexico's silver output during the calendar year of 1919 amounted to approximately 75,000,000 ounces, of which 33,000,000 ounces were refined in Mexico, according to unofficial estimates received by the Department of Commerce. Of the 33,000,000 ounces of silver refined in Mexico it was said 3,000,000 ounces were retained in Mexico for coinage purposes, and the balance of 30,000,000 were practically all exported to the United States. Under date July 17th the *North China Herald* reported that no individual was allowed to carry out of the Kueiyang district more than £20 or £30 in silver. This enactment was in order to prevent the price of rice being exploited to the detriment of the distressed poorer classes, and incidentally shows how local conditions affect the demand for currency.

Indian Currency Returns.

NOTICES.

The London Joint City and Midland Bank, Limited, announce that a branch has been opened at 2 High street, Ventnor, under the management of Mr W. Grant. It is also announced that an office has been opened at Market place, Deddington (sub to Banbury).

Barclays Bank, Limited, announce that they will open on Monday next, October 4th, a branch at the corner of York street and Fountain street, Manchester (to be known as the Manchester Foreign branch), under the management of Mr A. C. Booth.

The London County Westminster and Parr's Foreign Bank, Limited, have taken over the Belgian and Spanish branches of the London County Westminster and Parr's Bank, Limited, as from October 1, 1920. A new branch has been opened at Valencia (Ulfredo Calderón 13 and Pascual y Genis 6) under the management of Mr F. G. Glassborow. The Foreign Bank is therefore now represented in the following countries:—Belgium: Brussels and Antwerp. France: Paris, Bordeaux, Lyons, Marseilles, and Nantes. Spain: Madrid, Barcelona, Bilbao, and Valencia.

A branch of the National Bank, Limited, was opened at No. 10 Southampton row, W.C. 1, known as the Holborn branch, on September 27th, under the management of Mr J. M. Jennings.

On October 1st, the National City Bank of New York opened a branch at 36 Bishopsgate, London, in the same premises for many years occupied by the International Banking Corporation. The National City Bank of New York also recently opened a West End branch at 11 Waterloo place. The interests of the National City Bank of New York are in the care of Mr Ernest E. Ling, vice-president, now stationed in London, with Mr John Kinmont Moir and Mr George Edwards, joint managers. Mr John Kinmont Moir also remains the manager of the London branch of the International Banking Corporation, a position which he has held for many years. Mr Charles Vincent Sheehan is sub-manager of the West End branch of the National City Bank of New York.

The office of the Guaranty Trust Company of New York in Constantinople will open for business on Monday, October 4th. Mr Sigmund Letz, formerly acting joint manager in London, is manager of the new office of the bank, Mr Peter Solari, assistant manager, and Mr Richard Schellens, secretary.

A branch of the National Bank of Australasia, Limited has been opened at 138-140 Rundle street, Adelaide (to be known as Rundle street branch).

The Bank of British West Africa, Limited, announce the appointment of Mr David Wells Paterson and Mr R. Roy Wilson as assistant general managers at head office.

Reports and Notices.

The London office and registered address of P. and W. Maclellan, Limited, is now Clutha House, 10 Princes street, Westminster, S.W. 1.

The Right Honourable Sir Edward Goulding, Bart., M.P., has been elected director of the Anglo-Argentine Tramways Company, Limited.

Sir Philip Lloyd-Greame, K.B.E., M.P., has retired from the board of the Anglo-Argentine Tramways Company, Limited, on accepting office as Parliamentary Secretary to the Board of Trade.

The directors of the Marine and General Mutual Life Assurance Society announce the retirement of the actuary and secretary, Mr Stanley Day, F.I.A., and his acceptance of a seat on the board. The joint actuary, Mr Howard Turner Cross, F.I.A., has been appointed actuary and secretary.

Mr B. D. F. Docker has resigned his seat on the board of the Metropolitan Carriage, Wagon, and Finance Company, Limited.

The Standard Bank of South Africa, Limited, 10 Clements lane, E.C. 4, announce the numbers of certain bonds of the Salisbury (Rhodesia) 4½ per cent. Municipal Loan, which have been purchased for cancellation.

At a meeting of the council of the British Federation of Iron, Steel, Tinplate, and Metal Merchants (Inc.), held on September 29th, Mr Harry Ellis (Brandeis, Goldschmidt, and Co.) was elected chairman for the ensuing year.

BANKS.

ANGLO-SOUTH AMERICAN BANK, LIMITED.—At a meeting of shareholders to be held on October 20th, the directors will submit the accounts for the year ended June 30, 1920, showing a profit, including £241,619 6s 10d brought forward, of £1,265,775 7s 3d. They will recommend that £227,714 15s 2d be applied to the payment of a final dividend of 9s per share, less income-tax, on 722,904 old shares and

£37,843 15s be applied to the payment of a final dividend of 7s 2½d per share, less income-tax, on 150,000 new shares issued in October, 1919 (being *pro rata* on capital paid up to June 30, 1920), both being payable on October 27th next, making a total distribution for the year of 15 per cent., in addition to which a special interim dividend at the rate of 20 per cent. per annum, less income-tax, was paid on April 30th last, and that £58,600 7s 6d be applied in payment of the expenses in connection with the acquisition of the shares of the British Bank of South America, Limited, and that £50,000 be added to the investments reserve fund in order to provide for depreciation of securities; that £136,000 be added to reserve fund, making the total amount thereof £3,850,000, including premiums received on new issues; £25,000 to be added to the staff pension and guarantee fund; £75,000 to be applied in payment of a bonus to the staff, and that £393,116 9s 7d be carried forward. The transfer books of the company will be closed from October 1st to 26th inclusive.

THE KAGIMA BANK, LIMITED (Osaka, Japan). — Gross assets, 155,853,243.86 yen; net profit for half-year ended June 30, 1920, 1,170,399.29 yen; deposits, 119,451,557.14 yen; reserve fund, 2,300,000.00 yen; paid-up capital, 15,000,000.00 yen.

MISCELLANEOUS.

MAPPIN AND WEBB. — As foreshadowed at the last annual general meeting, the capital is to be increased. It is proposed to increase the ordinary shares by £300,000 to £600,000, and the preference shares by £450,000 to £900,000, raising the dividend on the latter from 5½ per cent. to 8 per cent. as from October 17th. In consideration of such increased dividend, the preference shareholders will be required to consent to an increase in the preference share capital, ranking in all respects *pari passu* with the old preference shares. Of the increased preference share capital, it is proposed to utilise 100,000 shares to exchange the 100,000 6 per cent. cumulative preference shares of £1 each in Mappin and Webb (Brazil), Limited. Mappin and Webb, Limited, hold practically the whole of the ordinary shares of Mappin and Webb (Brazil), Limited, and by the acquisition of the preference capital certain economies in administration can be effected. Shortly after the above proposals for increasing the share capital have been carried through the directors propose to make a public issue of 200,000 ordinary shares and 200,000 8 per cent. cumulative preference shares on attractive terms. Priority in allotment will be given to existing shareholders.

SELFRIDGE AND CO., LIMITED.—The directors propose to increase the capital of the company by the creation of 1,000,000 preferred ordinary shares of £1 each, entitled to a fixed cumulative preferential dividend of 10 per cent. per annum, and ranking as to capital and dividend immediately after the preference shares and in priority to the staff participating shares and the ordinary shares of the company. It is proposed to issue the shares at par, and in their allotment to give prior consideration to applications received from the present holders of the preference shares of the company.

(a) Also three years' dividend to August 31, 1920, on the preference shares.
(b) Increased capital.

The Anglo-South American Bank announce a final dividend of 9s per share, less tax, on 722,904 old shares and a final dividend of 7s 2½d per share, less tax, on 150,000 new shares issued in Oct., 1919 (being pro rata on capital paid up to June 30, 1920), both being payable Oct. 27th, making 15 per cent. for the year, in addition to which a special interim dividend at the rate of 20 per cent. per annum, less tax, was paid on April 30th last.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

The completion of harvest operations is proceeding under favourable weather conditions, and the land is being prepared for autumn cultivation, while farmers are also busy with threshings. The ingathering in the North has been delayed by adverse weather, and a considerable quantity of grain is still in the fields. The early intimation that farmers will obtain the world's price for the 1921 crop should afford every encouragement to increase the acreage under wheat next season. Offerings of native wheat continue to increase at most of the principal distributing centres, and good millable grades are readily taken at the maximum price of 95s per 504 lbs, or 96s delivered up, while 100s is named for seeding qualities. Imported descriptions move off rather quietly at regulation prices, which have not so far been advanced. Crop reports from most exporting countries are mostly favourable, though further rains would be welcome in India and Argentina. The flour trade proved rather quieter, the recent advance tending to check the demand for the time being, while bakers have apparently

BARCLAYS BANK LIMITED

† Free of tax.

acquired fair stocks at the old rates. Allocations of imported included a certain proportion of Chinese, which, however, does not find much favour, owing to lack of strength, and other baking qualities. English G.R. grades quoted 86s per sack ex mill, and imported 86s 9d to 88s 3d per sack of 280 lbs, ex store. English malting barley firm, with a better inquiry at 98s to 110s per 448 lbs, according to quality. Imported quiet. Californian 98s per 448 lbs, ex ship No. 4. Canadian Western 73s 6d, Plate 73s, Morocco 78s, all landed per 400 lbs, on c.i.f. terms. Parcels of superior Californian afloat to Hull sold 88s per 448 lbs. Australian Chevalier, 91s; No. 4, Canada Western, September-October, 65s 3d; October-November, 64s 6d; and a part cargo of Dan-Bess-Kustendji, afloat, 69s per 400 lbs. Maize quiet and values easy. Plate, old 73s, new 75s 6d, landed, per 480 lbs. Forward trade quiet and prices unsettled. Plate parcels afloat sold 68s to 67s 9d; September-October, 65s 3d, 65s, and 65s 6d; October-November, 64s 3d-63s 9d, and 64s 6d; while a cargo of ditto afloat made 71s 6d; Danubian, afloat, 73s; Dan-Gal-Foxanian ditto at 72s per 480 lbs. Oats.—Native in good request and firm at 56s to 68s per 336 lbs. Imported irregular. Plate, 53s; American white clipped, 53s 6d to 54s 6d; black Irish, 53s 6d per 320 lbs. On c.i.f. terms trading has been quiet, but prices, after being easier, subsequently improved. Plate, f.a.q., August-September, sold 50s 6d to 51s 6d; September-October, 48s 6d to 50s 6d; No. 2, Canada Western, October-November, 52s 6d to 53s; November-December, 52s to 52s 6d per 320 lbs; and Danubian, September-October, 46s 6d per 304 lbs. Beans firmer inclined, and peas held for fully late rates. Oatmeal quiet, unaltered. A feature in the homeward freight market was the active demand for grain tonnage from the Danube at advancing rates, and several steamers were taken at 62s 6d up to 70s U.K./Continent, October-early November. The River Plate section was quite featureless, 90s prompt up-river representing owners' ideas, with 5s less money obtainable. North American markets quiet for grain, though rates quite steady, and 16s 6d per qr was paid from the Range to Oran/West Italy. It is reported that Germany has made liberal purchases of wheat from the U.S.A., consequently a fair quantity of tonnage will shortly be required to carry the grain. North Pacific closed a steamer at 110s home, October-November, while 105s is bidding for a sailer November-December barley. India firmer, with a good general inquiry Bombay on dead-weight quoted 85s, while Calcutta paid 110s on similar basis. Australia quiet for new season's loading, and 125s. is quoted January to April U.K./Continent wheat.

THE IRON AND COAL TRADES.

Our Glasgow correspondent (writing on Thursday) says: In the belief that an amicable working arrangement would be arrived at by the negotiators in the coal trade dispute, there has been an observable expansion in business in iron and steel this week. But the announcement to-day of what looks like a serious and possibly fatal hitch in the proceedings has created concern amongst dealers as to the wisdom of their action. The buying was principally of Scotch foundries, hematites, steel plates, sheets, and bars, all of which are eagerly sought after by home and colonial consumers. For immediate constructional work operators will take all they can secure, and that for as long as possible, as the con-

ASSETS EXCEED £19,000,000.

tracts in hand are heavy and responsible. During September Clyde shipbuilders launched no fewer than 24 vessels of 49,251 tons, making up the total for the three-quarters of the year to 166 vessels of 489,425 tons, constituting a record in the history of the industry. And from the quantity of work known to be on the books, it is expected that the current rate of execution will be maintained throughout the balance of the year yet to run. There are some wild stories in circulation as to big cancellations of shipbuilding orders, the reputed values mounting up to over 7 millions sterling; but careful inquiries show that the cancellations are really small, and that over the river there are at present only a couple of empty slips, and that if prices do not advance beyond the existing level, more, rather than fewer, boats will be soon on order. Much depends on supplies of material, especially plates, the home output of which is behind requirements. The situation in this respect has been somewhat eased this week by the arrival of a couple of cargo loads of plates from the United States, and more are on passage. At the various steel establishments plants are running to their utmost capacities, and yet are badly behind in deliveries of all heavy sections. Belgium is offering freely prompt delivery of steel bars, joists, and angles at several pounds a ton under what is named locally—say £21, against £25-24. Black sheets are tendered at £4 a ton lower than is asked here. Though a large number of men are idle or on broken time, conditions generally are active, and would be even more so if the necessary material—raw and semi-finished—were more plentiful. But prospects will be wholly upset should an open rupture issue in the coal trade.

Our Sheffield correspondent writes:—Conditions in the iron and steel trades do not improve; in some departments they have rather worsened on the week. Makers of crucible steel are not only poorly employed, but they are showing a lack of confidence in things improving before the end of the year. The outlook for the winter is regarded generally as being the reverse of satisfactory. There seems to be no finality to the offering of surplus war stocks of various steel materials, and the vast quantities of these sold and still to be disposed of indicates the policy of reckless buying which was pursued during the war. The quantities would be equal to a war extending over 10, 20, and even 30 years. The iron trade continues to hold a strong position. The make of both foundry and steel-making pig continues inadequate, notwithstanding the idleness of a number of the largest steel furnaces. Belgian competition in soft steel and manufactured iron is developing, and with the exchanges in favour of the export trade, Belgian makers can underquote British prices very considerably. A good deal of steel is also being received from the United States. Here, however, the movements of the exchange are adverse. There is plenty of call for a good many kinds of hand tools and cutlery, the output of which is chronically insufficient. One hears reports of extensive cancellations of foreign orders, notably in Eastern markets, and to a less extent elsewhere. Owing to defective production, the execution of shipping orders is subject to vexatious delays, because some items in a consignment fail to turn up. The postponement of the miners' strike caused some relaxation of recent tension in the coal trade, but the demand for all classes of fuels continues active. The call for steam coal is well above the supply. Owing, however, to the lessened exports there have been fewer complaints of scarcity this week. A rather better supply of small fuels is reported. Gas companies are increasing their reserves as much as possible. When the strike was postponed owners liberated large stocks of house coal in wagons which were being held in reserve. No further scarcity in this department is anticipated if the collieries keep working. Current prices per ton at pits are:—Best South Yorkshire hards, 33s 2d to 33s 8d; ditto Derbyshire, 32s 2d to 32s 8d; steam cobbles and nuts, 31s 8d to 32s 2d; washed smalls, 28s 8d to 30s 2d; best hard slacks, 28s 5d to 28s 11d; small slacks, 23s 2d to 24s 2d; branch, 37s 2d to 37s 8d; best silkstone, 33s 8d to 34s 8d.

Our Middlesbro' correspondent's report, dated September 30th, is as follows:—Pig-iron: Business is quiet, as makers have practically all their output sold for some time ahead, and there is no chance of increasing the production. Coke is very scarce. Prices are firm and unchanged at 225s for Cleveland No. 3 and No. 4 Foundry and 260s for mixed numbers East Coast hematite, all for home consumption. Manufactured iron and steel: The demand for finished iron and steel is not quite so good. The troubled outlook in coal trade is checking inquiry for forward business. Steel ship plates, home, £24 10s; steel ship angles, home, £24; iron ship angles, home, £30 15s; iron bars, home, £30; steel rails, home, £25 net. Iron ore: Prompt best Rubio is quoted 47s 6d to 48s, and there are reported to be sellers for forward at slightly higher prices.

MANCHESTER, September 30.

The market this week has been upset by the slump in raw cotton rates, which has been followed by violent fluctuations in Liverpool and New York. The tone has been uncertain, and conditions in all quarters have been very unsettled. Towards the close of the week there has been an increased inquiry in piece goods, buyers being interested to find out what concessions sellers are prepared to grant. Certain shippers to India have bought light fabrics, such as dhooties, rather more freely, but trade has not been of a general character. Bids for China remain scarce, but isolated lots have been sold for the minor markets of the Far East. More favourable clearances continue to be reported in Egypt and Turkey, but fresh buying has not yet come round. Manufacturers have been easy sellers, and most kinds of cloth can now be purchased at figures which either show a loss, or only about cover the cost of production. Enterprise on the part of merchants is still checked by the financial stringency. The yarn section has been very irregular. Prices in both American and Egyptian qualities have given way, and buying has been limited.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Depression throughout the entire wool textile industry is very acute, and in the absence of new business, values are not being tested. Current quotations are all more or less nominal, and when definite business is offered in tops, yarns, or pieces, sellers are prepared

to make considerable concessions. Although good average 64's tops are nominally quoted at 6s 6d per lb, sales have been made at 6s; and 2-48's yarn out of this quality, nominally quoted at about 11s, are being offered in some cases at one shilling less. Export trade with the Continent is practically at a standstill on account of the adverse exchange rates. There is very little demand for home-grown wools, but the finer sorts remain fairly firm. There are some very heavy stocks of low and medium wools, and for the time being these are a drug on the market. The piece trade is inactive, and stocks are accumulating. Throughout the industry a good deal of short time is being worked, and many firms are finding difficulty in running their machinery four days a week.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

There is nothing better to report about the London sales which closed yesterday. It is perhaps too much to say that the series has been one of the most disastrous since prices for the raw material began to depreciate, but, viewed from any standpoint, no satisfaction can be expressed regarding the course of values. Almost every day fully half the quantity offered was withdrawn, a clear proof of the indifference of the demand, and that the sellers were not prepared to accept the prices offered. However disappointing the course of the auctions may have been, they have only reflected conditions in consuming centres, both at home and abroad, and it is more apparent than ever that the Government will have to make a further revision of prices. There seems to be nothing to be gained by refusing to meet the market, this being particularly the case with regard to the lower and shabbier wools. The fact that merinos generally have declined 15 to 20 per cent. is significant, and even at the lower basis thus established buyers have not been at all keen to take the offerings. A few satisfactory prices have been paid for Tasmanian greasy merinos, but even the best wools have declined fully 10 per cent., and it looks as if even warp merinos will have to come down to a lower level before the trade will be willing to put their money into them. It is stated that good 64's tops can now be obtained in Bradford at as low as 6s 6d to 6s 9d for immediate delivery, but these values are sensibly below what tops made out of wool bought during the past fortnight will cost, a clear proof that there is considerable financial stringency. There is good reason for stating that this prevails throughout the entire trade, and the smaller firms who up to last March contributed not a little to the upward movement of values are now being squeezed in a way which practically means the loss of what they had previously made. It is impossible to ignore the fact that the wool textile industry is passing through the worst period known, and but for the fact that they have been able to recoup themselves through past payments of E.P.D., a good many would go under. The auctions are finishing with values distinctly weak, and there will have to be a vast alteration in trade if they are maintained at future sales.

The first sale of new clip Colonial wool since about November, 1914, was to take place in Adelaide yesterday. This event marks the opening of a new and interesting chapter in connection with the Colonial trade. A recent letter from Adelaide contained a significant question, "Where are buyers coming from?" That remains to be seen. Those who have left England, the Continent, and America are sufficiently numerous to give a good account of themselves at all the Australian selling centres, but there is nothing in consuming centres to inspire any party to cable buying orders, hence the trade is prepared for anything to happen. It is useless for writers in the Sydney Press to say that Bradford has engineered the fall. Such statements are beside the mark entirely, for wool prices are being dictated to-day as much as ever by the law of supply and demand. Members of the Sydney wool trade have said things about the wool trade of England for which there is no justification. Users in this country would be quite prepared to pay prices fully equivalent to those current in Coleman street if there was the least incentive to do so. As a matter of fact, the outlook for new business could not be worse, and unless there is a vast alteration there will be a considerable amount of combing, spinning, and weaving machinery standing idle in a month's time. Already many mills are standing on Saturdays and Mondays, and it seems impossible to get new piece business.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

The linseed market has been very sensitive to the weather and crop reports from Argentina, and prices have varied accordingly. More reassuring news as to seeding time conditions has, however, steadied the market and caused values to fall back to what they were a week or so ago. A good trade was done in Plate linseed last week, old crop being taken up freely for shipment to Hull at £38 down to £37, while new crop found ready buyers at £36 10s down to £35 10s, January-February shipment. Only a small trade has been done in Indian, £41 being paid for Calcutta to London. Owing to the high prices of Indian and the few offers, crushers appear to be well contented to continue to pay attention to the Argentine surplus. Trade in cotton-seed is on small lines, near shipment of Egyptian being delayed by lack of freight room. The demand for soya beans has fallen off, and buyers offer about £1 less than a few days ago. A brisk trade in palm kernels is reported, with spot and shipment prices dearer and fully firm.

Linseed oil has fluctuated somewhat, but the effect of the higher level of prices for near delivery has been to restrict business to normal trade requirements. The impression seems to be that a revival of demand will ensue as the industrial position clears, and some speculation has advanced prices of January-April delivery to within £1 of spot. Trade in cotton oil has been largely confined to technical soap-making quality, Bombay, though minor sales in Egyptian are reported below market value. Palm kernel oil has been a good market round £88 for crude, ex Hull mill. A steady trade has also been done in ground nut oil. Rape oil is in fair demand, and castor oil has again been advanced.

The quantity of linseed on passage to the United Kingdom has increased to 42,600 tons, and that to the Continent to 40,000 tons. Cotton-seed afloat for the United Kingdom is 26,300 tons.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Best ox sold at Bermondsey market on Thursday at 12¼d, thus showing no alteration on last week's rates. Seconds dropped ⅛d, cows remaining steady. Calf were again depressed, and declines of 3/8d-1d were noted. Lambs dropped 9d-12d each, two classes of pelts advancing 3d per skin.

There is no trading to report in foreign hides, and what little business has been done has been at buyers' ideas of value. Frigorifics afloat are offered at 14d-14½d, c.i.f., salted weights, with few takers. Cables from New York report a weakness in the Chicago market, with best packers still offering at 28 cents. Drys are weaker, and further declines are likely.

There is no improvement to report in the leather trade this week, and sales are few and far between. Prices of sole leather are very unstable, and consumers have no confidence in the market, as here and there tanners are eager to sell, in spite of all the talk about limiting input of hides. Bellies and shoulders share in the general depression, and are selling at lower prices.

Upper leather is also slow, and every order has got to be fought for, and possibly prices lowered. Box calf and glacé are, of course, selling all the time, but at prices which can show no profit. Much anxiety has been felt in trade circles over the rumour that the Government intended to dump five million pounds' worth of German upper leather on our market as part payment for the indemnity. This has been cautiously denied by the Tanners' Federation, but some amount of anger is felt over the matter, as the Leather Commission which visited Germany some months since reported Germany was not in a position to export leather for some time, as stocks of raw material were low.

Shoe manufacturers are very short of orders still, and most factories are working short time. The Shoe and Leather Fair opens at the Agricultural Hall, London, on Monday next, and will provide an excellent opportunity for members of the trade to compare notes on the unsatisfactory position of affairs, and it is to be hoped take some steps to deal with it.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, October 1.

Only quiet trading was witnessed during the week in the leading commodities, requirements on the part of the home trade having become lessened, while export business is still hampered with the near Continent owing to the question of rates of exchange being, in most cases, adverse to them. Financial considerations still weigh upon the point of securing accommodation, and form a barrier against anything like general freedom of trade.

SUGAR.—The chief feature this week was to be found in a sustained demand for crystallised West India, and a marked inroad has now been made into existing stocks. Sales resulted at 99s to 103s. Muscovado and also fine syrups sold steadily, the former at 80s for fine Barbadoes. Whites quiet, and small transactions include American granulated at 118s 6d and Mauritius 115s 6d. There is no recovery in demand for American syrup, and the market remains quite nominal. Honey sold slowly, on former terms.

COFFEE.—General quietness again governed this market, and supplies offered in auction were only partially sold, but prices showed no material alteration. Some East African bold sizes, sold, 99s to

GIRARD TRUST COMPANY

107s 6d; Salvador-Maragogipe, 136s; Uganda, fine ordinary, 78s 6d. Future delivery market slow; and December, sold, 57s.

COCOA.—No auctions were held this week, and the market meantime remains in a dull state, with ample supplies available.

TEA.—During the week 34,000 packages Indian and 32,200 packages Ceylon were catalogued in auction, and while all useful descriptions met a ready market at full rates, common qualities sold with some irregularity.

RICE.—Market steady, but general trade quiet. Two stars Rangoon, 45s, on spot. Rangoon bran quiet, but steadily held. Beans slow.

SPICE.—Pepper market met with only quiet support, and sales include black Singapore, spot, at 6¾d; ditto, October-December, 6¾d; Lampong, spot, 6¾d; Aleppy, 7¼d; Tellicherry, 7¾d; white Singapore, spot, 1s 2¼d; Muntok, ditto, 1s 3¼d; ditto, October-December, 1s 0⅞d to 1s 1¼d. Zanzibar cloves, spot, sellers, 1s 7½d to 1s 8d, as to quality. Pimento, spot, sellers, 4d. Tapioca quiet. Fair flake, spot, sold, 2¼d per lb; ditto, October-December, London, sellers, 22s; fair Penang seed, spot, 25s 6d; October-December, 24s; small sago, spot, 33s to 35s, as to sample. Sago flour, October-December, 21s 6d to 21s and 21s 3d. Farina, spot, 32s; October-December, 30s 6d. Desiccated coconut, fine cut, spot, 84s; medium, 92s 6d; and coarse scarce on spot.

JUTE.—The market opened the week with a subdued tone, and with a disposition on the part of holders of secured parcels to meet the market, prices declined slightly, though offers from Calcutta were sparingly made. Native first marks assortment, old crop, September-October, actuals, sold, £53 to £52; subs at £49; new actuals, September-October and October-November, £59 to £56; subs, £51; lightning actuals, ditto, £44; subs, £41; Daisee No. 2, actuals, £55 to £52. Calcutta hessians steady, quiet. 10-ounce, spot, sold, 56s; and 8-ounce, at 43s. Twills firm, quiet. A, spot, sellers, 127s 6d; B, ditto, sold, 114s; September-October, sold, 116s. D.W. salts, spot, sold, 100s; and ditto, November-December, at 95s.

HEMP.—Manila disclosed quieter features this week, and rates were inclined to be a shade weaker. J grade, spot, sold, £70; ditto, August-October and October-December, £69 10s; K, August-October, value £59; L, £58 10s; and M, £47. New Zealand dull and fair in dock, sellers at £51. East India quieter. No. 2 Benares, October-November, sellers, £32 10s. Italian very quiet on this market and nominal.

FRUIT.—The first auctions of the year were held on Tuesday last when 241 tons Valencia raisins were offered. Good competition prevailed; good to fine being 2s easier than private rates, and ordinary to medium from 6s to 8s per cwt. down. Choice, however, brought full rates. Quarters sold from 130s to 152s with choice 155s to 160s; seedless halves, 139s to 140s; and some Cape, 91s to 115s. Currants met a slow sale, and new Pyrgos, sold, 87s to 88s; new Amalias, 89s to 90s. Sultanas, old Symrna, spot, sold, 130s; and new, 155s to 170s. Dates steady. First tide, Hallowee, 48s; Khadrowie, 44s; Siar, 41s. Figs—layers, 146s to 152s; and pulled, 200s.

SHELLAC.—Market rather unsettled. Spot sales were on the basis of 630s for fair free T.N. standard. October delivery, sold, 570s to 555s and 560s; December, 545s to 530s and 545s. In auction, on Tuesday last, of 1,097 cases offered, 722 consisted of parcels salved from steamer "Botanist." Quite a good demand ensued, and satisfactory prices were obtained. Good to fine orange, blockey to free, sold, 580s to 715s; A.C., block, 330s to 400s.

COPRA.—Market slightly irregular, and general trade quiet this week. F.M.S. Straits, October-December, London, sold, £58 to £57 10s and £58 5s; Ceylon, ditto, £59; ditto, to Rotterdam and Antwerp, £58 15s and £59 10s. Palm kernels, October-December, sold from £40 5s to £40 15s and £40 10s.

MENTHOL.—Spot, Kob-Suz, sold, 29s; Japanese peppermint oil, ditto, 6s 7½d; aniseed, 4s 1d; and slab camphor, 6s 3d to 6s 6d per lb.

RUBBER.—After advancing on improved buying and reserved, the market reacted sharply. Plantation crepe, spot, sold, 1s 7¼ to 1s 8½d and 1s 6¾d; October-December, 1s 8½d to 1s 10½d and 1s 7d; January-March, 1s 10¼d to 1s 11d and 1s 8½d; sheet, spot, after rising, 1s now 1s 5¼d; October-December, 1s 5½d; and January-March, 1s 7d. Fine hard Para, spot, 1s 7d.

OILS.—Linseed quieter. Spot, net, naked, 82s; October-December, 80s. Rape firm. Crude, spot, 74s; refined 90s. Cotton firm. Crude Egyptian, 73s; Bombay, 63s; refined edible, 94s. China wood firm. Hankow, spot (barrels), 109s; and Hong Kong, spot, 106s. Palm kernel firm. Crushed, spot, 88s; extracted, 87s. Palm firm. Softs, October-December, 64s; Lagos, 65s 6d. Coconut dearer. Ceylon, spot, sold, 96s 6d; September-November, 95s; Cochin, ditto, 97s. Soya quiet. Oriental, afloat, 74s; October-December, 73s; deodorised, 90s. Japan fish quiet. September-November (cases), 43s. Cod liver dull. English, spot, sold, 47s. Groundnut firm. English crushed, naked, spot, 83s; deodorised (barrels), 104s. Turpentine easier. American, spot, 143s; October-December, 144s 3d; January-April, 148s 6d. Rosin easier. American, grade B, 46s; F, 49s; G, 49s; K, 51s; M, 52s; WW, 54s; French, F/G, 45s 6d; H, 45s 6d; WW, 47s; extra pale, 48s. Petroleum advanced sharply; American, spot, 2s 4¼d; and water white, 2s 5¼d per gallon.

OILSEEDS.—Linseed: market easier. Calcutta, afloat, sold, £41 to £40 10s; September-October, sold, £41 to £40 5s; Bombay, September-October, £41 5s; Plate, afloat, Hull, £37 10s to £37 5s; September-October, sold, £36 10s to £36 5s; January-February, new crop, £35 15s to £35 10s. Rapeseed easier. Toria, September-October, Antwerp, £35 10s; real bold Ferozepore, £34 10s; brown Cawnpore, £32 10s. Cottonseed lower. London Egyptian, f.a.q., September-October, sold, £19. Bombay, spot, £15; September-October, at £14 15s. Castor seed firm. Bombay, September-October, Hull, sellers, £29 10s. Gingelly steady. Chinese, afloat, to Continent, sellers, £49. Groundnuts quiet. Coromandel, August-September, £40.

METALS.—Tin continued in better demand until Tuesday, holders showing some reserve, the price of cash advancing to £271 and three months to £277. The tendency was lower during the middle of the week, on realisations, while these positions relapsed to £268 15s and £274 respectively. After an easier opening on Thursday, values moved in an upward direction since, under good buying, and settled down slightly lower as dealings left off, cash being done at £264 to £268 and three months to £271, improving to £274 10s. At Friday's session the market hardened on active buying, though some irregularity prevailed, cash fluctuating between £272 10s and £271, while finally done at £271 10s and three months £276 to £278, with £276 10s registered at the last. English ingots £269 to £270. Copper: The standard market declined until Tuesday, on fairly liberal offerings, cash being registered down to £94 5s and three months to £94 15s. A good business was done during the middle of the week, the tendency being firmer, cash reaching £94 10s and three months £95 10s, and finally £95. A quieter feeling prevailed on Thursday, sellers maintaining reserve. Cash sold to £94 10s, early November £94, and three months to £95. At Friday's session little change characterised movements, cash moving at £94 to £94 5s and three months at £94 10s to £95 10s. Electros, £111 to £114; best selected, £105 to £106; strong sheets, £168. Lead easier at £34 7s 6d to £34 5s. Spelter lower at £40 5s to £41 5s. Antimony: English, Regulus, ordinary to best, £52 to £55. Aluminium: Home trade, £165; export, £185. Wire bars, £113 to £114.

TALLOW.—Messrs Colchesters and Woolner write as follows on September 29th:—The tallow market was firm during the week, and prices were mostly 1s dearer to-day. There are few offers for shipment from the colonies at current rates. Good pasture after drought leads to less killing for a time. At auction to-day 2,097 casks tallow were offered, and 1,097 were sold. Quotations are:—Australian mutton: Fine, 79s; good to fair, 78s to 75s; dull to dark, 68s to 61s 6d; hard, 77s. Australian beef: Fine, 84s; good to fair, 74s to 71s; dull to dark, 67s to 63s; sweet, 87s 3d. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 75s; and mixed, 43½, c.i.f., London, 72s. The market letter is unchanged. Town tallow, 65s per cwt. Rough fat per 8 lbs, 7½d to 1s 3½d; melted stuff, 51s per cwt. Quotations are:—Town: 62s net cash, naked, ex works. Country: Frail casks, 55s; home melted, shipping casks, net, f.o.b., good coloured, none; fair to dull, 64s to 60s. Bone fat: White, none; pale, 62s; benzine, 56s; melted stuff, 57s, f.o.b.

THE CHATWOOD SAFE

The Second Line of Defence

of THE CHATWOOD "Special Diamond" Quality SAFE consists of the unique method of securing the door. This is effected by massive ROUND Steel Bolts 2 ins. diameter (at the top, bottom and both sides of the door), operated by two CHATWOOD "Invincible" (unpickable) Locks—the whole controlled by THE CHATWOOD 5 spindle combination LETTER LOCK.

The latter also causes an undrillable steel shield to cover the keyhole, thus effectually preventing the insertion of explosives or the fraudulent use of duplicate keys.

THE CHATWOOD SAFE BOOK

DUNLOP

THE NEW MAGNUM TYPE

TRADE MARK

Dunlop tyres of the "straight side" type to fit American rims can now be supplied in all sizes.

The very exceptional durability of its fine black rubber tread makes it the most economical tyre for all users—for the high powered car, the light car, or the trade van.

JOHANNESBURG CONSOLIDATED INVESTMENT CO., LIMITED.

(Incorporated in the Transvaal).

REPORT OF DIRECTORS to be submitted to the Shareholders at a Meeting to be held in the Board Room, Johannesburg Consolidated Investment Company, Limited, Consolidated Building, Fox Street, Johannesburg, on Tuesday, the 23rd day of November, 1920, at 11 o'clock in the forenoon.

ACCOUNTS

1. The Balance-sheet and Profit and Loss Accounts of the Company for the financial year ended 30th June, 1920, are submitted herewith.

PROFITS.

2. The profit for the year, after providing for depreciation, English and Colonial Income Tax and other charges, amounts to £499,194 0s. 2d. This sum, together with £186,009 8s. 2d. brought forward, makes the total available balance £685,203 8s. 4d.

DIVIDEND.

3. On the 23rd June, the Directors declared a Dividend of 10 per cent., and also a Bonus of 2½ per cent., both free of Income Tax (payable to Shareholders registered as at 30th June, 1920), as compared with a dividend of 7½ per cent., free of Income Tax, declared last year. The distribution referred to absorbs £493,750 (as against £296,250 the previous year), leaving a balance of £191,453 8s. 4d. to be carried forward to next account.

VALUE OF SHAREHOLDINGS.

4. The Company's shareholdings have been written down to their market value as at 30th June last.

FINANCIAL POSITION.

5. The Company continues to hold a large proportion of liquid assets, and its financial position is one of exceptional strength.

MINING INTERESTS.

6. The position of the various Gold Mines under the Company's control is, as usual, fully dealt with in the Reports they respectively issue. The following points may, however, be of special interest:

Government Gold Mining Areas (Modderfontein) Consolidated, Limited. The results obtained from this property continue to fulfil the high expectations which were entertained regarding it. The ore reserves are about 11 million tons of an average value of 8.6 dwts. over a stoping width of 77 inches.

Van Ryn Deep, Limited. The ore reserves of this Company are well over 3,000,000 tons of an average value of 9.1 dwts. over a stoping width of 72 inches.

Randfontein Central Gold Mining Company, Limited. The output progress of this Mine was considerably retarded by a serious accident in Block 'A' Shaft, which was rendered useless for a period of three months. This Shaft was, however, fully repaired towards the end of June last, and haulage has since been resumed. During the year under review the two new vertical Shafts have intersected the Reef, the North Shaft at a depth of 3,210 feet, the assay being 9.8 dwts. over 48 inches. In the South Shaft the Reef was intersected at a depth of 4,130 feet, the value of the sections sampled being 12½ dwts. over 48 inches. Another satisfactory feature, apart from the values disclosed, is that the Reef continues to dip at an angle of 60 degrees in the North Shaft and 55 degrees in the South Shaft. It is expected that both shafts will be available for haulage of ore in the near future, and it is fully anticipated that the consequent reorganisation of the Mine will lead to permanently good results. The principal obstacle to more rapid progress has been the time and energy which had in the first place to be employed to convert the Mine into an efficient up-to-date proposition. There is now every reason to anticipate that the policy which has been pursued will prove to have been fully justified.

It may be opportune to mention that the Supreme Court of the Union of South Africa has awarded the Randfontein Estates Company £215,000 plus interest at 6 per cent., as from February, 1907, in the action recently brought by that Company against Sir J. B Robinson. Particulars of this action have been fully referred to in the Press.

Randfontein Deep, Limited. A proposal for the taking over of the Randfontein Deep property by the Randfontein Central has been submitted for the consideration of Shareholders in both Companies. It is considered that the Randfontein Deep, in which the Company holds an important interest, can only be profitably worked in conjunction with the Randfontein Central, and it is therefore hoped that the proposal will be adopted, as it is thought to be in the best interests of both companies.

New State Areas, Limited. Phenomenal progress has been made in respect to the sinking of Shafts on this property, and it is anticipated that the Reef will be intersected towards the end of the present year.

GOLD PREMIUM.

7. The additional profits earned by the various Gold Mining Companies by reason of the premium on the standard value of gold have been substantial, but fluctuating.

WORKING COSTS.—SOUTH AFRICAN CURRENCY BILL.

8. High wages and the continued higher cost of mining material have largely contributed to the increased working costs recorded in the Reports of the various Mining Companies. An important additional adverse factor has been the exceptionally high exchange rates charged by the South African Banks for the negotiation of sight drafts drawn against gold shipments. The maximum rate recorded was 8½ per cent., which constituted a very serious charge against the Mining Companies' profits. In this connection it is satisfactory to report that the rate has since been reduced practically to a normal basis. The high exchange rates recently ruling were based on the expense connected with the export of sovereigns to South Africa. The Union Government, recognising the ill effect of these prohibitive rates, introduced the South African Currency Bill, the operation of which will certainly be the means of restricting the further shipment of sovereigns to South Africa.

GOLD REFINERY.

9 An arrangement has been concluded for the establishment of a Gold Refinery in South Africa, at which all the gold from the Witwatersrand Mines will be dealt with.

GOLD PRODUCTION.

10. The value of the gold uproduced by the Company's Group of Mines for the year ended 30th June last approximates to £9,500,000.

DIAMOND MINES.

11. Your Company remains largely interested in the leading Diamond Mining Companies in South Africa, and the Dividends distributed by them during the past year constitute a record.

ESTATES AND TOWN PROPERTY.

12. The sales of building sites on the Company's residential estates continue to be very satisfactory.

MANAGING DIRECTORS IN SOUTH AFRICA.

13. Mr. G. Imroth, having resigned his appointment as Managing Director in South Africa, retains his seat on the Board. The Company has been fortunate in securing the services of Professor J. G. Lawn to serve in the capacity of Joint Managing Director in South Africa, coupled with the position of the Company's Consulting Engineer, which he previously held

Mr. J. Munro, who has been Acting Chairman of the Company in Johannesburg for many years, has been appointed Joint Managing Director with Professor Lawn.

DIRECTORS.

14. In terms of the Articles of Association, three of the Directors—viz., Messrs. Charles Marx, H. A. Rogers, and G. Imroth—retire by rotation, and offer themselves for re-election.

You will also be asked to confirm the appointment of Professor J. G. Lawn as a Director of the Company.

ELECTION OF AUDITORS.

15. Messrs. W. Fergusson and S. Thomson, the Auditors of the Company in Johannesburg, and Messrs. Chatteris, Nichols and Co., the Auditors in London, retire from Office, and offer themselves for re-election.

By Order of the Board,
THOMAS HONEY, }
W. H. MARDALL, } Secretaries.

28th September, 1920.

THOMAS HONEY, Secretary.

We report to the Shareholders that we have audited the accounts of the Johannesburg Office of the Johannesburg Consolidated Investment Company, Limited, dated 30th June, 1920, and have obtained all the information and explanations we have required. The Balance-sheet of the Johannesburg Office of the Company is, in our opinion, properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs in Johannesburg according to the best of our information and the explanations given to us, and as shown by the books of the Company in Johannesburg. We have also verified the securities in South Africa.

SAML. THOMSON, Chartered Accountant,
W. FERGUSSON, Registered Public Accountant, } Auditors.

Johannesburg, 6th July, 1920.

We report to the Shareholders that we have audited the Accounts of the London Office of the Johannesburg Consolidated Investment Company, Limited, dated the 30th June, 1920, and have obtained all the information and explanations we have required. The Audited Accounts of the Johannesburg Office have been properly incorporated in the above Balance-sheet and Profit and Loss Account, and in our opinion the Balance-sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the books of the Company. We have also verified the securities in London.

THE MONEY MARKET.

VERY heavy repayments to the Bank of England have had less than no effect on the resources of the market, because they appear, from the figures of the Bank return, to have been more than balanced by the non-renewal of maturing Treasury bills, and a consequent very large increase in Ways and Means advances made by the Bank of England, resulting in a net addition of 23¾ millions to the Other deposits. Fears of a rise in Bank rate were thus renewed, as is usual whenever the present most unsatisfactory position of the floating debt necessitates creations of new credit for the Government by the Bank. In some quarters they were accentuated by the news that an issue of 15 millions Local Loans stock at 50 was

being underwritten, on the rather curious assumption that when the Government has got the money it will put Bank rate up. It seems more likely, however, that the extent to which the new credit is cancelled by being put into Treasury bills will be the chief influence on the Bank's policy with regard to its rate. Thus the matter is largely in the hands of the banks and of their industrial customers, who continually clamour for credit. A very interesting memorandum on the Future of Prices and Wages has this week been issued by the Federation of British Industries, urging that the only way in which prices can be reduced and real wages improved is "by working the instruments of production at their maximum pressure." This is eminently true, but the Federation's sermon is rather one-sided, being addressed mainly to the wage-earners who practise "ca' canny," and to the Government, which dissipates the country's resources. It would have been even more effective if it had appealed also to those employers who are deliberately restricting output, and are pestering their banks for credit in order to keep up prices of the goods that they hold. By so doing they help to perpetuate an unsound position, both in industry and finance. Scarcity of bills and plenty of credit made discount rates easy.

* * * *

The Bank return was not a pleasing picture. Increases of £81,000 in the stock of gold and of £313,000 in the note circulation left the Reserve £232,000 lower, while an increase of nearly 42 millions in the Government securities, with a decrease of 13¼ millions in Other, caused a net addition of 28½ millions to the total securities. The total deposits, further reinforced by the transfer of half-a-million from the Rest, through the payment of the Bank's half-yearly dividend, were 28¾ millions higher, of which 27¾ went to Other and 5 to Public.

* * * *

The circulation of Currency Notes increased by £2,381,000 to £356,176,000, which includes £3,229,500 for notes called in but not yet cancelled. The reserve of Bank Notes was expanded by £50,000, making the fiduciary issue, excluding notes called in but not cancelled, £305,696,800, or £14,903,200 below the maximum. We have hitherto, in calculating the amount of the fiduciary issue, included the total of notes called in but not cancelled, because we considered, and still consider, that these notes, though no longer legal tender, are still part of the issue outstanding. Their holders can make out a case for claiming gold for them on presentation, and can certainly claim new notes, legally convertible into gold, in exchange for them. This being so, to ignore them as part of the outstanding issue in calculating the fiduciary total seems to be an exercise of adroit ingenuity, carried out with the best possible intentions, but most unsound bookkeeping, and contrary to the straightforward principles of British currency policy. But since the Treasury is the interpreter of its own minutes, and has decided that this principle is to be adopted, we have reluctantly decided to give the official view.

* * * *

Exchange rates compared with quotations at the end of last week show an almost all-round depreciation in foreign currencies in the London market. In the silver exchanges especially this movement is strongly marked, the spot price of the metal having dropped from 59d on October 1st to 56⅛d on the 7th. The Shanghai rate, which had remained fairly steady round 6s for some time, has fallen away during the week to 5s 7½d. The weakness developed in the rupee market on the withdrawal of Reverse Council drafts continued during the week, and quotations show a drop of 1½d at 1s 8d. In view of the trade position in the East, and if the reports of a disappointing monsoon are realised, little relief appears likely from the comparatively small quantity of wheat which may be shipped from India. The New York rate, which was round 3.49 a week ago, has shown a stiffer tendency, being quoted yesterday 3.50¾. Large consignments of cotton and wheat may normally be expected from America at this time, and purchases of coal by this country may soon be added to the depressing factors on the New York rate, while a large proportion of the payments for the increasing quantities of coal shipped by America to Continental ports falls as additional weight on the London dollar market. The trend of New York forward market has been towards narrower margins, slightly lower money rates in New York having helped this tendency. Paris rate has been inclined to rise during the week, and was quoted yesterday 52.40, possibly owing to some extent to the postponement of the proposed French loan. Future quotations show narrower margins at about 20-30 points per month, a considerable amount of forward francs being offered. Brussels still moves sympathetically with Paris, and at 49.80 shows a margin of about 2.60. The rate on Holland has risen steadily, yesterday's quotation of 11.29 showing a rise of 13 points on the week. Forward quotations remain about spot prices. Berlin marks showed slight depreciation, being quoted yesterday 221. Wild movements have occurred in the Italian exchange, which touched 91 on Wednesday. Yesterday's prices round 88.50 show some recovery. Scandinavians all moved in favour of this country, and the gradual upward movement in the Swiss and Spanish quotations has continued. Considerable depreciation is shown in Austrian and Polish currencies, the quotations reaching the high figures of 950 and 1,000 respectively. The increased possibility of peace being signed between Russia and Poland will probably stimulate exports from this country to Poland, and this, if realised, will be an important factor in the Polish exchange.

EVENTS OF THE WEEK.

October 2nd.—*Daily Herald* appeals to trade unions for financial assistance.

October 4th.—President Wilson issues appeal on behalf of League of Nations for coming presidential election in United States. Commerce Committee of International Financial Conference pass resolution in favour of free trade.

October 5th.—Mr Asquith's letter on Ireland published. Proposed agreement for trading with Soviet Russia issued. Mr Theodore, Premier of Queensland, threatens forced loan of £2,000,000. International Free Trade Conference in London opened.

October 6th.—Bolshevists reported to have accepted Polish peace proposals.

October 7th.—Mr Smillie advises miners to vote for acceptance of owners' offers. Agreement reached between British, French, and Belgian flax spinners on yarn prices.

INTERNATIONAL FREE-TRADE.

The meeting of the International Conference of Free-traders in London will to many minds merely recall past controversies. But though the issue of Free-trade versus Protection, so far as this country is concerned, is no longer for the moment a fighting political issue, the essential elements of the controversy still remain, and, indeed, always will remain. If the problem be impartially analysed, it resolves itself into the eternal dispute between the producer and the consumer, between the man who wants to sell dear and the man who wants to buy cheap. In most countries it is usually the producer who has the greatest political pull, because the producers of any particular commodity, being few in number and having a concentrated interest, can easily organise themselves for the benefit of that interest. Not only so, but they are also able to create a popular prejudice that their interest is the interest of the whole community. The argument is very simple, and, like most political arguments, superficially plausible—otherwise it would not catch the ear of the multitude. The Protectionist contends that people must produce in order to consume; they must sell in order that they may buy; and, therefore, it is the business of the State to protect the producer, so that by selling at a satisfactory price, he may be able to pay high wages, his workpeople may be prosperous, and all may go well in the best of all possible worlds.

The argument might be allowed to pass as conclusive for practical purposes were it not for the awkward fact that the interests of one producer are generally at variance with the interests of other producers. When we speak of the consumer, our minds too frequently form a picture of a person who is only buying for his private consumption. As a matter of fact, the vast majority of consumers are people who buy something in order to produce something else. The consumer of coal may, it is true, be a person who only wants coal for his kitchener or his study fire, but the majority of consumers of coal are persons who want to burn it for producing steel in the myriad forms in which man utilises that metal, or for producing cotton or woollen goods, hosiery, or boots, and almost every other saleable article. The same consideration applies as we go step by step along the chain of production. The consumer of pig-iron is a producer of steel; the consumer of steel is a producer of machinery; the consumer of machinery is a producer of clothing or furniture. Consequently, the fundamental argument against Free-trade, that it is necessary to protect the producer, fails absolutely in the way in which it is used. It is impossible to protect producers as a body, because their interests are divergent. All that the State can possibly do is to protect some producers, necessarily at the expense of other producers. Therefore the real problem resolves itself into the question: Which producers shall the State benefit, and at whose expense? This, of course, is not a method of putting the argument that appeals to the Protectionist politician. It gets too close to unpleasant facts. But it is on the issue as thus stated that ultimately the question must be decided.

It perhaps helps towards an understanding of the problem to ask how it happened that England led the way in the movement towards Free-trade. The answer is that, owing to our insular position and to the commercial enterprise of our ancestors, we had succeeded in building up a very large overseas trade. Further, owing to the possession of large coalfields and to the introduction of steam-driven machinery, we were able to develop our manufactures earlier to a relatively greater extent than most other countries, and by the middle of the nineteenth century a vast population had grown up to work the new machinery. As a result, we had become very largely dependent upon imported food for the maintenance of our population. Even as far back as 1820 the home supply of wheat was insufficient for the home consumption. But the ruling classes, among whom the owners of agricultural land occupied a dominant position, wished for their own interests to maintain a high price for corn. That created an issue which everyone in the country could understand, the issue of the working man's bread against the landowner's rent. Consequently it was possible to make in England a popular appeal on behalf of Free-trade in corn. It was an appeal, which affected not only the working man, but the capitalist manufacturer, and at the time of the Anti-Corn Law agitation no one greatly worried about other aspects of Protection. The Corn Laws were the keystone of the arch. There was no powerful interest to support other forms of Protection, and the men who had clamoured for Free-trade in corn in the name of commercial liberty could hardly turn round and demand Protection for manufacturers.

That, roughly, explains how it is that the United Kingdom became in the middle of the nineteenth century overwhelmingly in favour of Free-trade. The word "United Kingdom" is here used advisedly, for though many Irishmen to-day have acquired the habit of saying that the Corn Laws were abolished to please England at Ireland's expense, as a matter of fact, among the most active supporters of Cobden were the members of the Irish political party, rightly acting in the interest of the small Irish farmer and semi-starved Irish labourer, who had no interest in high corn prices.

Most other countries at that period were growing their own food, and manufacturing but little for export. It was, therefore, comparatively easy for their manufacturers to urge the importance of the State protecting them against English competition, and no strong political opposition could be raised to that demand. The same thing happened in our own colonies, and it must be remembered that even Mill gave some support to the theory that a new country was justified in protecting incipient manufactures, in order to build up a manufacturing industry.

To-day the position differs in this respect, that Great Britain no longer has the same extraordinary supremacy in manufacturing industry as she possessed down to and beyond the middle of the nineteenth century. Other countries, though they have not yet, generally speaking, caught her up, have become her rivals, and in the case of some industries have surpassed her. But that fact only gives

additional justification to the method of argument urged above. If we are to revert to Protection in this country, we must ask ourselves which industry are we going to protect, and at the expense of which other industries? If we shut out imports by a high tariff to protect any one industry, not only do we injure those other industries which were buying those imports for their own use, but more generally we injure all British manufacturers who are producing for export; for, so far as we check imports by means of a tariff, exactly so far do we also check the exports by which we pay for those imports.

In practice, what happens in our own country to-day, as in others, is that as soon as a particular manufacturer finds himself hit by foreign competition, he begins to clamour for protection. If he is peculiarly astute, he will create a legend that his particular industry is essential for national defence. That is what has happened in the dye-producing industry. On the plea that the same chemical processes that are required for the manufacture of dyes are also serviceable for the manufacture of high explosives, the manufacturers engaged in this industry have received support both in the shape of large grants of public money and in the shape of Board of Trade interference with the importation of competing dyes. The result is that our dye-using industries—which measured in money are commercially at least a hundred times as important as our dye-producing industries—are handicapped because they cannot obtain the superior dyes which foreign countries produce.

In the present conditions of production, resulting in scarcity everywhere and acute distress in some countries, the erection of trade barriers seems to be a suicidal policy. The Federation of British Industries has very truly told the wage-earners this week that we are very considerably poorer than we were in 1914, and that the only way in which the position can be restored is by "working to their maximum capacity the few instruments which the war has left us." But a policy of active production is an insufficient remedy for the world's poverty if its effects are to be warped by fiscal barriers.

Beyond these commercial and industrial arguments for Free-trade, or, at any rate, for an honest definition of Protection, there is the even broader argument which animated the International Conference, namely, that Governmental interferences with trade tend to provoke international quarrels. As long as private traders are left to their own devices to determine their varying interests, no national problem is raised, but as soon as one nation begins to establish a code of laws to benefit a section of its own subjects at the expense not only of other sections of its subjects, but also at the expense of foreign subjects, what was an industrial problem becomes a national problem, and may lead even to war.

THE COAL BALLOT TANGLE.

In order that a large scale ballot may fairly represent the views of those who take part in it, certain preliminary conditions are necessary. The issue must be simple, the voters must understand "beyond a peradventure," as Mr Wilson would put it, what that issue is, and the result should be a clear decision one way or the other. Unhappily, none of these conditions exist in regard to the coal ballot of next week. The issue is very far from being simple. If the miners were being asked whether or no they approved of wages being based upon output, that would be a definite inquiry, to which they could make reply. But they are asked to say, yes or no, whether they approve of basing wages on output according to a particular scale—a very different question. They may approve the principle, but object to the "datum line"; on the other hand, they may regard the datum line as not in itself unreasonable, but may wholly object to the principle of a datum line at all. It is a good deal to expect that miners will all at once accept a new principle for wages calculation and at the same time approve a specific application of that principle.

We have, therefore, a complicated issue instead of a simple one; is there any reason to believe that the rank and file of the miners understand it? They are familiar with the idea of basing wages on coal prices, and, after long experience, fully comprehended the baffling complexities of the old sliding scale. But the principle of basing wages on mass output is quite new—not output per man or per colliery, but on the average rate of output in all the fields of Great Britain. The miners may well complain that however intelligible the system—and the particular application—may be to the minds of those who have been threshing it out in London, it is not readily to be perpended by those who have it suddenly flung at them without much explanation and without any advice from their executive as to how they ought to vote upon it. The natural man, when asked to vote on a proposition which is strange to him, and of which he does not clearly understand the after-effects, may be pardoned if he feels some cautious hostility.

We see, then, that the first two conditions for a plain direct yes or no to a plain question do not exist. Neither does it appear that the third condition of a clearly defined issue is present in this ballot. Suppose that a majority of the coal miners, left unguided by their executive, and strongly advised by local hotheads to spurn the datum line as a coalowners' trap, suppose that a majority vote against the new proposal? We are afraid that a hostile majority over the whole country is quite likely. What is then to happen? Mr Hodges says that the mandate to strike given by the August ballot is restored. Other leaders say that another ballot may be taken on the Government's offer to submit the wage claim to an impartial tribunal. If a leader is in favour of a strike, he maintains the sanctity of the August ballot; if a leader wants to find a way not to strike—and many leaders dread a strike intensely—he suggests that the datum line ballot is no more the last word than the August strike ballot was. The cleavage in the Miners' Federation is deep, and we are ready to believe that the leaders will, if they possibly can, get round the effects of an adverse datum line ballot, just as most of them have been doing their best to get out of the entangling ballot of last August.

There exists a precedent for the bold policy of cutting the tangles of ballots which seem to commit coal miners to a hopeless and unpopular strike. In 1912 there was a general coal strike, on the authority of a miners' ballot with a two-thirds majority. The strike went on until the miners' funds had been exhausted and the industry of the country was within a little of a complete stoppage. Mr Asquith's Government then offered legislation to establish a minimum wage. A new ballot was taken on this offer, and the offer was rejected by the rank and file of the miners. But the leaders knew better than their followers that the strike must be stopped, so they stopped it, on the ground that the majority voting against Mr Asquith's offer was not two-thirds. The miners, having made a protest, willingly accepted the decision of their leaders.

One may hope that whatever happens in the ballot of next week, a way will be found to avoid a general coal strike. The executive can continue the suspension of strike notices while negotiations proceed, and can submit their wage claim to the tribunal offered by the Government. For the miners' leaders, the miners, and the country anything is better than a general strike. It will be most unfortunate if the principle of basing wages upon output is not at once established, but a principle so novel, and one which arouses so much prejudice, is not easy to get accepted at the first time of asking.

OUR INDEX NUMBER.

A further decline is recorded in our Index Number of wholesale prices for September, the drop amounting to 98 points. The total now amounts to 7645, as compared with 7743 a month ago, and 6587 at the end of September, 1919. The fall last month, however, as will be seen from the figures in the table below, was by no means general, and the net result is due not to an all-round lowering of prices, but to further progress towards the general level from fantastic heights in the textile section. The following table, which shows the position of each of

The Liberty National Bank
of New York

Accepts deposits drawing interest from foreign banks, firms and individuals.
Buys and sells drafts, and cable transfers on foreign countries.
Furnishes credit and trade information to foreign firms desiring to buy or sell in the American market.
Finances foreign shipments, secures customers against loss in exchange subject to approval of the transaction.
Buys and sells American and foreign securities.

London Correspondents

British Bank of Northern Commerce, Ltd. — *Barclay's Bank, Ltd.*

the groups at various dates since the Armistice, is instructive. The index number at the end of November, 1918, is taken as 100 :—

	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Total.
End Nov., 1918	100	100	100	100	100	100
Sept., 1919	108	104	107	116	97	106
Dec., 1919	112	113	132	126	104	118
Mar., 1920	117	116	161	138	123	134
Aug., 1920	111	118	136	144	112	124
Sept., 1920	117	119	128	145	110	123

Thus, while foodstuffs have been more or less stationary during the past six months, minerals have steadily advanced, and textiles have dropped considerably.

Our usual table gives the alterations each month in the index numbers for the various groups since the end of October, 1918 :—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	Percentage Change.
Basis (avg. 1901-5) ..	500	300	500	400	500	2200	*100·0*

„ Sept. „	1504	928	2362½	1311	1539½	7645	*347·5*

In the first group of foodstuffs the rise is principally accounted for by the removal of a further portion of the subsidy on flour, the quotation for G.R. having advanced from 63s 6d to 86s per quarter. Barley was slightly higher, but otherwise cereals were practically unchanged. The quotation for potatoes increased a little, and meat prices generally were a trifle higher. Among subsidiary food products, tea and coffee were lower, but this was offset by a further increase in butter.

In the textile group, cotton, especially Egyptian, and wool are considerably lower. Cotton yarn and cloth have also fallen heavily. According to Messrs Robert Barbour and Brother, Limited, "the incentive to accept lower prices for cloth grows larger and larger as the number of manufacturers still well provided with orders becomes less and less, but the prospect of substantial concessions has failed to move either India or China, or, indeed, any of the overseas markets, and the month's turnover has proved almost negligible.....The month closes with depression at its deepest; any feeling of confidence has been completely wiped out by the recent happenings in America; purchases that some few weeks ago were looked upon as highly favourable can no longer be viewed in the same light, and the general outlook is extremely black in every direction."

With an indifferent demand, prices at the last London wool sales dropped further. Jute is exceptional, with rather a sharp rise, and hemp is slightly higher.

In the minerals section, pig-iron and steel rails have advanced, but the minor metals are lower, lead showing a comparatively large drop. In the miscellaneous list, petroleum, oils, and oilseeds are higher, but the declines include leather, rubber, and soda crystals, the last having dropped by 20 per cent.

ENGLISH GAS COMPANIES.

The Gas Regulation Act of 1920 gives power to the Board of Trade to substitute for the present sliding scale a charge based on "thermal units," or, in other words, according to the quality of gas supplied. The price to the consumer can be varied when the Board of Trade is satisfied that costs of production have altered. Local authorities, or a body of not less than 20 consumers, have power to make application that charges should be revised. Thus the hardships under which gas undertakings have laboured in the past few years have at last been recognised, and stockholders in efficiently conducted companies can now expect to see a reasonable return on their investments. Minimum rates of dividends from 5 to 6 per cent. have been fixed, and stockholders are entitled to participate in further profits after the cost of gas has been reduced to consumers.

Before the passing of this Act, most gas companies were subject to the sliding scale. This provided that dividends on ordinary shares and stocks should be regulated according to the price charged for every thousand feet of gas. For each penny charged above or below the standard price the standard rate of dividend was reduced or increased by a fixed sum per cent. For instance, owing to high working costs, the South Metropolitan Gas Company in 1918 was compelled to increase the charge for gas to consumers to 4s per 1,000 cubic feet. To pay

the statutory sliding scale dividend at the rate of £3 4s per cent. upon the ordinary stock, the company found it necessary to draw on its reserve for £23,303.

The new Act also provides that annual accounts and returns are to be submitted to the Board of Trade, and that copies of these accounts shall be furnished to local authorities and also placed on sale for the public. In the past, as our articles on gas undertakings have shown, most companies published accounts half-yearly, but, as a result of this Act, many companies are taking advantage of the changes required to publish annual accounts. The half-yearly accounts of several companies are therefore not available. In the table given below we analyse the revenue and expenditure of representative London and provincial gas undertakings for the past two years, and submit pre-war figures for comparison :—

It will be noticed that in regard to profits, most companies are making gradual progress to catch up with pre-war earnings. Although receipts in many cases are satisfactory, the heavy expenditure entailed in manufacture absorbs a considerable part of increased revenue. Some idea as to how expenditure has grown may be gathered from the fact that the South Metropolitan, which paid out for labour £296,823 in the half-year ended June 30, 1913, state, that wages for the corresponding half-year in 1919 amounted to £692,897. The report of the South Suburban also records a significant growth in wages. In 1913 its wages bill absorbed £119,010, but in 1919 the amount had increased to £303,403. Coke is still the most important residual product of gas undertakings, although tar and tar products show significant increases. The sale of benzol does not figure very prominently in accounts, although rumours have been afloat for some time as to important developments in this direction.

The following table shows how quotations for gas stocks have varied since 1913 :—

Name of Company.	Year 1913.		Year 1914		Year 1918.		Present Price.
	Highest	Lowest.	Highest	Lowest.	Highest	Lowest.	
Brighton & Hove Stock	214½	202	212½	203	149	135	122½
Commercial, 4% Stock	108	104	109¾	105½	71	55	56½
Do 3½% Stock	104½	101½	107½	102¾	65	55	49½

South Suburban, 5% Ord. Stock	121	114	118½	113⅞	77	68	62¼
Wandsworth, 3½% "B" Stock	133½	130½	135½	129	80½	67	55½
Wolverhampton, Ord. Stock	209	205	210½	210	154	150	100

The market has recently displayed a greater activity than usual, and prices of the leading companies have hardened up a few points. But the market, as a rule, is steady, and the stocks seem to be fairly well held. Of course, prices have naturally suffered during the past few years in sympathy with many other Stock Exchange securities.

Gas undertakings have passed through many critical periods, but the outlook to-day is brighter than it has been for years past. They have maintained, by inventive genius and efficient service, their position in the competitive struggle with electric supply companies. The demand for by-products is greater than the supply, and for domestic heating purposes, gas still holds the field when economy of cost, cleanliness, and labour-saving factors are considered.

LATIN AMERICAN NOTES.

(BY OUR CORRESPONDENT.)

CHILEAN COAL.—Trade and commerce in Chile have been seriously affected of late by the continued strike among the coal miners; business seems to have been brought to a complete standstill in some parts of the Republic, notably the northern provinces, and, to a less extent, in the capital, Santiago. The Chilean coal-fields, situated in the Lota Coronel districts, are mainly the property of one wealthy Chilean family, which, until recent years, had always maintained the friendliest relations with its thousands of workmen. Indeed, the benefactions to the credit of the Lota family have been excelled in no country of the world. But for the intervention of labour agitators these relations would, in all likelihood, have undergone no alteration; the men themselves have been, and must always be, the principal sufferers. As far back as the commencement of April the coal mines were already behindhand with their deliveries to the local railways, with the result that, as the strike manifested no signs of a settlement, these transportation routes were obliged to draw upon the permanent reserves and to suspend a number of regular trains. By the month of May not a single ton of Chilean coal remained in the railway bunkers, and every passenger and cargo train was suspended. The effect of this upheaval upon the trade and shipping of the district may be imagined. Later on, a few hundred tons of coal were rushed up from Valparaiso, while a further small quantity was borrowed from such sources as the local gas-works, which, fortunately, were well stocked. Many thousands of tons of cargo have been held up at different stations on the west-coast route, awaiting transhipment to the coast. While, at the time of writing, the differences between the miners and their employers have been nominally settled, a large number of men have refused to go back, while others are working with reluctance. Once things become again normal, it is the avowed policy of the mines to form a very large reserve in view of the recurrence of the present troubles. Smelters, mills, and factories of other descriptions have had to close down, and the already swollen ranks of the unemployed have been materially increased.

NICARAGUA.—The restoration of prosperous economic conditions in Nicaragua seems to be proceeding, if not with the rapidity at one time hoped for. The season has proved variable in regard to the republic's main sources of wealth, for while the sugar season has been rather better than usual that of coffee has proved disappointing. Several new plantations of cane-sugar have helped to swell the season's output, and this produce has been sold for export at round about $10 to $12 per quintal, f.o.b. steamer port of shipment. The whole output is expected to reach a total of 250,000 quintals, against but 182,000 quintals for 1919. It may be added that during the period of great scarcity, some of this output was disposed of in advance at fancy prices, the greater part of the considerable profits made going to the monopolistic exporting companies. In other respects, the economic prospects of Nicaragua are considered to be good. The coffee crop is spoken of as well advanced, and looking very healthy. The berry forms the largest exportable article, and upon its prosperity depends the great success of the country. Prices, which had not been very encouraging last season, are higher to-day, and look like going still better. On the other hand, it now costs considerably more to prepare and ship a coffee crop, for in Central America, as in most parts of the world, the demands of labour have become a serious factor in the situation. Moreover, it is to be remembered that the coffee planters of Nicaragua have gone through four years of

poor prices, during which time many of them became heavily indebted to the banks and the money-lending import-export houses, mostly owned or controlled by Germans. Even if the present season should turn out as well as it is hoped, it will take all the expected profits to satisfy the demands of the banks and to cover obligations to other debtors. In the meantime, practically no renewals or new credits are being granted by the banks or mercantile houses. So soon as the status of the coffee season is definitely known, however, the position may alter.

GUATEMALA.—It is a fortunate coincidence that the new President of Guatemala should be an experienced financier, as his immediate predecessor in office, Señor Manuel Estrada Cabréra, never claimed to be. As a former President of the Finance Commission of the Chamber of Deputies, Señor Don Carlos Herrera rendered no small service to his country at the Financial Congress held at Washington in 1915. The benefit of his wise counsel has already been made manifest in the improved condition of Guatemala's finances, a considerable number of internal obligations having been cleared off and the path made smooth for settling others. He has also assisted in organising a new method for the collection of taxes, tightening the net through which formerly many of the larger fish escaped, leaving only the smaller and poorer to be dealt with. Señor Don Herrera will have a good deal of opposition to meet, no doubt, from among the wealthier classes, who view with displeasure any attempt to rope them in; but he has the bulk of the people behind him.

BOLIVIA.—It seems somewhat remarkable that while French financial interests have found, and are finding, in Bolivia a fruitful field for economic enterprise, British investments should have hitherto proved little more than nominal if the acquired and not-inconsiderable railway interests be excepted from consideration. The amount of French holdings in Bolivian Government bonds and industrial securities is estimated to approach a sum of between £5,000,000 and £7,000,000, according to Señor Don Adolfo Ballivián, the Bolivian Minister to St. James's, while, according to the same authority, British investments all told do not exceed £3,500,000. For a country claiming an area of 708,195 square miles of territory, a population of 2,820,000, and a foreign commerce exceeding (in 1918) £17,000,000, this is not a great showing. Our keenest rivals in Latin-American trading, the United States, are beginning to recognise the economic attractions of Bolivia, and of late several North American banking houses have opened branches at the principal cities, such as La Paz, the capital, Sucre Oruro, Cochabamba, and Potosí. New Orleans capitalists have also established the Pan-American Bank at La Paz, the initial capital being $250,000 (=£50,000), divided into 2,500 shares of $100 (£20) each. The shares offered to Bolivian subscribers appear to have been readily absorbed. Further, a capital of $10,000,000 has been raised among United States capitaists for the construction of railways, principally to connect La Paz with Sucre via Potosí, and another line from Cochabamba to Santa Cruz de la Sierra. The inducement in this latter case is the granting of immense tracts of land—at present useless—upon either side of the new railway; these may, hereafter, easily become very valuable. The late revolution in Bolivia was entirely a pacific one, and there has been little or no economic disturbance in the country as a consequence. No arrests of political partisans have been effected, and the troops have everywhere recognised and sworn fealty to the new Government. So far, moreover, all obligations arising under the foreign debt have been met, and there seems to be every probability that they will be so met in the future. The elections for a president will be held next month (November), the chances pointing to Dr José Maria Escalier as the selected candidate. Dr Escalier is a political chief of some note, having been the Republican opponent of the ex-President, Señor Gutierrez, since 1917. In the meantime, Dr Saavedra is ruling the country, as the Head of a Junta, both wisely and justly, gaining the good opinion of all parties alike. His coadjutors are Señor Daniel Salamanca, founder of the Republican party; Señor Daniel Sanchez Bustamente, member of the Supreme Court; and Dr Eliodoro Villazón, a former President.

The Company invites communications from British Manufacturers desirous of developing business in the above countries.

Business Notes.

Overseas Trade in September.—The Board of Trade Returns for September appear as we go to press, and fuller examination must be deferred until next week. Imports at £152½ millions show an increase of £4 millions, as compared with September, 1919, but a decrease of half-a-million as against August last. British exports at £117½ millions are £2½ millions better than in August and £51 millions higher than September a year ago. Re-exports are unchanged as compared with August, but £2½ millions lower than last year. The excess of imports works out at less than £22 millions, as against £25 millions for August and £66 millions a year ago. The principal increases in exports are shown under cotton manufactures (+£20 millions), iron and steel and manufactures (+£5½ millions), and vehicles (+£6½ millions).

Finance Accounts for 1919-20.—Accounts for the financial year ended March 31st last have just been published. Total gross liabilities on that date amounted to over £7,875½ millions. The figures of our estimate of National Debt, given in another column, were 6 millions out, and we have adjusted these accordingly. Interesting details are given of Miscellaneous Revenue. From the Government of India over £10½ millions was received as a contribution (on account of £100 millions) towards the expenses of the war. Federated Malay States sent £877,410, Straits Settlements £600,000, and Jersey £25,000, to be devoted to the same purpose; the Bank of England contributed under this heading £706,712, while receipts from various private individuals totalled £31,852. Special receipts included £69,700,000 from the Wheat Commission, £56,000,000 from Ministry of Shipping, and £25,000,000 from Ministry of Food. It is, perhaps, surprising to find that sales of surplus stores from the Ministry of Munitions only brought in £69,000,000 during the year. Under ordinary receipts £12,700,000 came into the accounts, being on account of excess of currency notes investment reserve beyond the proportion of 5 per cent. on securities held.

The Railway Deficit.—The increase in passenger fares in the early part of August has had a surprisingly small effect upon the passenger revenue of the railways, the financial results of working for August showing passenger receipts at £13,044,275, as compared with £12,654,958 for July. This increase is no larger than might have been expected had rates remained unchanged. Total revenue for August was £22,968,050, as compared with £23,228,447 for July, making a total of £104,166,679 for the five months ended August 31st. Expenditure was £824,054 less than in July at £19,969,908, making a total of £97,963,172 for the five months. The excess of revenue over expenditure for August was £2,948,106, and for the five months £5,629,429. This makes the net Government liability £2,119,894 for August and £15,635,571 from April to August inclusive.

Census of Production.—The Statistical Department of the Board of Trade is now making preparations for the census of production in the year 1921, in respect of production during the year 1920. Consideration is being given to the schedule of questions to be submitted to manufacturers in the various industries of the country. It is understood that the Board of Trade are in communication with the Statistical Committee of the Federation

of British Industries, the Association of British Chambers of Commerce, and the several employers' organisations, with regard to the schedule. It is reported that the Board do not propose to change the general nature of the information required compulsorily as compared with the previous census, which covered the year 1912. The schedule, therefore, will consist of a series of questions relating to the nature of trade or business, period covered by the return, output in year of return, cost of materials used, work given out, number of persons employed, and mechanical power in use. Some of the details of the schedule, however, will be varied in order to bring the output of goods manufactured into conformity with the revised classification adopted in the import and export list. The questions relating to mechanical power have also been revised, so as to secure a more exact estimate of the power actually used in the production of goods. As on the previous occasion, the Board of Trade will ask manufacturers to supply voluntary information. It is proposed to obtain from all trades separate particulars with regard to fuel consumed at engines and gas producers. It is also suggested that returns should be secured as to the amounts of various materials used in industry, particularly materials of special importance, either because of the quantities needed or of the peculiar character of the materials in relation to the industry. The Board consider it desirable to ask employers for the aggregate amount of wages paid in view of the importance of knowing how large a share of the wealth created in each industry is received by wage-earners. The leading trade organisations of the country are being requested to make any observations which they think desirable in order to make the form of schedules adequate to meet particular requirements of different industries.

Slough and St. Omer.—The third report of the Select Committee on National Expenditure (No. 183, price 2s net) deals with the sales of the dumps at Slough and St Omer. With regard to the former, the committee conclude "that the clauses in the Slough contract which provide that all articles which may be declared surplus within the next two years are included in the sale, without any extra price beyond what is mentioned in paragraph 18 of this report, being paid for them by the purchaser, are contrary to the interests of the taxpayer, inasmuch as the greater the number of articles declared surplus, the greater will be the share of the profit to the purchaser." The committee also think that some effort might have been made to ascertain the value of the articles included in the sale. With regard to the sale of the St Omer dump, the committee finds that "due care in negotiating this contract was not exercised." But in these cases, of course, the milk has already been spilt. As a practical suggestion for saving future waste, the last clause of the committee's report is perhaps the most important. This is to the effect that "the decision of the Cabinet that the Ministry of Munitions should cease to act as a purchasing department should be given effect to at once." It appears from the report that this Cabinet decision dates back to Maroh 23rd last, but that no steps have been taken to carry it out.

Raw Cotton Statistics.—At the beginning of this week the Agricultural Bureau of the United States Government published a report on the condition of the cotton crop as on September 25th, writes our Manchester correspondent, the figure being 59.1 per cent., against 67.5 per cent. a month previously, and 54.4 per cent. at the same time last year. The yield per acre is estimated at 165 lbs, and the report indicates a crop of 12,123,000 bales. It may be pointed out that forecasts from this source are generally conservative, and in most quarters it is anticipated that the commercial crop for this season will be nearly 13,500,000 bales. On the same day the American Government stated that up to September 28th 2,243,000 bales of cotton had been ginned, as compared with 1,835,000 bales at the same time in 1919 and 3,770,000 bales in 1918. On the whole, these statistics were about equal to market expectations, and the reports have not had any particular effect upon values. Particulars have just been published of the shipments of Egyptian cotton from Alexandria during the season ending August 31st last, the total being 737,857 bales. Of this amount, England took 345,461 bales, the United States 257,265 bales, France 50,089 bales, Italy 35,181 bales, India and Japan 14,355 bales, Switzerland 12,264 bales, Spain and Portugal 9,500 bales, and Germany 6,333 bales.

Cotton Trade Short Time.—Our Manchester correspondent writes:—After considering the question for some little time, the employers in the spinning section of the Lancashire cotton industry have this week decided to recommend all firms to curtail production on an organised scale in order to relieve the trade depression and prevent the accumulation of yarn stocks. The Masters' Federation has sent out a circular to all the members asking them if they are willing as a preliminary measure to stop their mills on Saturdays and Mondays for a period of one month, provided firms owning not less than 80 per cent. of the spindles are also agreeable. The voting papers have to be returned by October 14th, and it is proposed that the short-time movement shall begin on October 23rd and be continued until November 15th. The scheme will mean a stoppage of machinery for 52 hours. It is important to point out that the recommendation applies not only to mills engaged on American cotton, but also to firms using Egyptian cotton. In the past, even in times of bad trade, it has been rather difficult to secure united action in the Egyptian spinning department, but during the last few years the Masters' Federation has improved its organisation in the Bolton area, and there is now a better chance of united action. In connection with this movement the employers have expressed a desire to consider the effects of short time upon the operatives, but at a joint conference with the trade union leaders on Tuesday last no mutual agreement could be arranged, and the representatives of the workpeople could not see their way to recommend their members to become parties to any system of curtailment of production. The proposal of the Masters' Federation if carried out will mean a loss of one week's wages to nearly 200,000 workpeople.

The Russian Trade Agreement.—Everyone recognises that, until Russia can be restored to her old position as a producer and consumer there will be a gap in the trade and prosperity of the rest of the world, and only those who think political questions more important—even at this time of world crisis—than economic expediency would oppose an agreement with the Russian Government enabling the country's trade to be set going again. But before any agreement can be completed it is clearly necessary that the Russian Government shall recognise the sanctity of contract, and its liability for the debts of its predecessors whose assets it has taken over, and for the debts to British subjects of Russian municipalities, companies, firms, and individuals, and losses incurred owing to confiscations. Strong protests have therefore been entered by the bankers and accepting houses, insurance companies, and Chambers of Commerce against the terms published this week in the daily Press of the agreement which is now said to be in course of negotiation, under which the Russian Government only recognises liability to British subjects "in respect of goods supplied or services rendered to it or to the former Government of Russia or to Russian citizens for which payment has not been made owing to the Russian Revolution" (*Morning Post,* October 5th). If, as we believe, our Government very sensibly wants peace with Russia and its economic restoration, surely the straightforward thing to do is to recognise its Government and make peace, making it a condition that it shall in its turn acknowledge liability for all the debts and losses enumerated above, and then leave it to make such terms, by way of composition, as are required by the situation. To pretend that it is possible to make a trade agreement with a Government the official existence of which is not recognised seems to be a very shallow absurdity. But in the meantime, there seems to be no reason why private individuals should not be allowed to deal direct with individuals in Russia as long as they are

prepared to take all the risks involved by possible attachment of goods, gold, or securities in which they receive payment.

Japanese Trade and Finance.—Advices from Tokyo state that the close of September found trade in general still in a depressed condition, except for a little liveliness in textiles. The cotton yarn market, however, was especially dull in response to the report of a sharp fall in prices of American cotton. On the Stock Exchange cotton spinning shares led the way in a general downward movement. The silk trade is quiet, with the price maintained at 1,500 yen. The Imperial Filature Company, recently formed by raw silk merchants and others for the purpose of relieving the conditions in the trade, has not yet begun to operate. The price of rice has fallen to 24 yen per koku. In the money market the general tendency is easy, and no large demand developed in the later days of the month. At the end of September bank notes in circulation amounted to 1,170,000,000 yen, and advances by the Bank of Japan to 285,000,000 yen. Money at call closed the month at 1 sen 3 rin, or 4.7 per cent. per annum, and the discount rate at 2 sen 7 rin, or 7.9 per cent. per annum.

The World's Camphor Supplies.—Increasing complaints as to scarcity of camphor supplies lend interest to what Japan is doing to meet the demand, as Formosa, one of her richest colonies, is the main source of this important commodity. Japan fully realises that she practically holds the monopoly, writes our Tokyo correspondent, and is doing all that can be done to increase the output, though certain circumstances do not encourage great prospects in this direction. As the industry is a Government monopoly in Japan every effort is made to reafforest the lands exploited, so that the camphor trees may not be exhausted. The world's annual consumption of camphor is about 13,000,000 lbs, of which Japan supplies about one-half. In the camphor forests of Formosa there are some 12,000,000 trees in sight, though some of them are very difficult of access on account of savages and the mountainous nature of the country. A tree should be at least 60 years old before it can yield any large percentage of the gum. Consequently the number of trees to be exploited is limited. If the younger trees were used the supply would be adequate to the world's need, Japan would grow rich, but the industry in a short time would be at an end. Japan's policy of reafforestation and husbanding of resources is, therefore, an eminently wise one. Some 3,000 acres in Formosa have already been replanted with camphor trees, and under official encouragement a similar plan is being carried out in the provinces of southern Japan at an expense of some 50,000 yen annually. By this policy the supply will eventually be increased. How far the output has declined in recent years may be seen from the fact that in 1914 it amounted to 7,000,000 lbs in Formosa, whereas in 1917 it was only about 5,000,000 lbs. Notwithstanding the utilisation of synthetic camphor in many of the industries requiring the gum, the demand for natural camphor has continued to increase, as it is much used in chemicals as an insecticide, as an antiseptic, and in the making of incense. India and Japan herself use large quantities in this way. In Japan it is used in putting away woollens and silks in the summer months to protect them from moths and insects peculiar to the East. The greater portion of the output both in Formosa and Japan proper is exported, however, for the most part going to the United States, but the tide is now turning in favour of Great Britain and India. Camphor exports fell off from a value of 6,287,795 yen in 1916 to a value of only 3,686,375 yen in 1918. It is interesting to note how suddenly the export of camphor to the United States has decreased. In the year 1917-18 alone it fell off more than one-half, declining from 2,244,000 yen to 1,108,000 yen in value, while at the same time the export of camphor to England increased from 241,000 yen to 767,000 yen in value, quite threefold. Menthol crystal exports also increased to Britain, rising from 413,000 yen to 730,000 yen, while to America it declined from 930,000 yen to 485,000 yen. As the Sheffield cutlers are complaining of dearth of camphor for the manufacture of celluloid knife handles, it may be suggested that by careful arrangement they might be able to obtain from Japan some of the exports now going to other countries, in addition to what they have already contracted for.

Mineral Oil in South Africa.—The African Oil Corporation hopes soon to be actively engaged in the production of shale oil from the extensive deposits of shale situated on four farms in the Wakkerstroom district on the boundary line between Natal and the Transvaal. According to recent reports on the subject by Mr T. G. Trevor, inspector of mines, and Dr P. A. Wagner, the mining costs will be about 4s per ton of material broken, and three tons of material will have to be broken for each ton of shale. There are no signs of any important faults or igneous intrusions, and the working conditions generally are ideal, including, among other things, a plentiful supply of water, healthy surroundings, and the possibility of working entirely by gravitation. It is estimated that there are about 3,000,000 tons of shale per square mile, but the total area of the deposits is not yet definitely known. The results of eight samples and assays taken by the Central Mining and Investment Corporation, Limited, gave on Kromhoek 25 gallons of oil per ton from the upper shale and 14 gallons per ton from the lower shale, over a total width of 30 inches; while on Goedgevonden the results of seven samples over an average width of 31 inches, 23.8 gallons were obtained from the upper shale and 18.1 gallons from the lower shale. Tests made on the spot by Mr Mills-Davies, the consulting engineer, averaged over 30 gallons per ton over a width of 21 inches. A bulk sample of 60 tons has been sent to Glasgow for a practical test. Mr Trevor is of opinion that the distillation costs will be approximately the same as the mining costs per ton of shale—namely, 12s—and therefore the total costs of mining and distillation will be about 24s. Assuming a yield of 25 gallons per ton, at 3s per gallon, there is approximately the very substantial margin of £2 10s per ton, and since these shale deposits are known to extend from the Ermelo district to the Impendhle in Natal, a distance of about 200 miles, the chances of establishing a large shale oil industry seem favourable. Some fairly extensive coal deposits have also been found in the neighbourhood, within a depth of 500 feet. Transport will be facilitated by the construction of a new road, which it is hoped will be completed in 1921, and will bring Kromhoek within 17 miles of Wakkerstroom; but when the work is in full swing a new railway will doubtless be necessary, or the crude oil will have to be pumped to Wakkerstroom and there refined. It is hoped that the necessary plant will arrive early in 1921 for the construction of a unit capable of dealing with 300 tons of shale per day. Another company, the Wakkerstroom Oil Company, has also taken up some farms in the neighbourhood, but so far they have only done some preliminary prospecting.

The South African Market.—A Stock Exchange correspondent writes:—Next week there will be published the bulk of the August returns from the South African gold-producers, together with the profit statements for the month. The figures are awaited with rather more than ordinary interest, owing to the high price at which gold has ruled. If the labour returns are satisfactory, it is not unreasonable to assume that the Kaffir market may begin to attract attention again. Within the past few days a stirring of dry bones occurred in favoured groups of South Africans, but public interest is confined mainly to inquiries as to prospects, &c., on the part of those who hold shares at higher prices. Whatever demand has arisen just lately has been met by sales from French sources with a view to raising funds to be used in subscription to the forthcoming French loan. It is a mistake, of course, to say that no public interest is taken in Kaffirs over here. People are very considerable holders, but, as already noted, at figures higher up. The last general movement took place early this year, when gold crossed £6 per ounce, and induced a good deal of buying of shares. When the American exchange went up again, gold automatically receded. Labour troubles disturbed the Randt. Bank charges became extremely high, and the fall in Kaffirs which followed these events has caused widespread disappointment. Accordingly, the recent attempt at recovery is being keenly

watched by the public, and the extreme variations of highest and lowest prices are the subject of general attention. It may be useful, therefore, to set out a few of the representative prices over this year and last. We add the dividends paid for 1919, and also the current quotations :—

Share	1919. H.	1919. L.	1920. H.	1920. L.	1919. Div.	Price.
City Deep	3½	2⅜	3⅞	2 3/16	4/9	2 13/16
Cons. Main Reef	17/	10/3	19/	10/3	1/9	14/6
Crown Mines	3 13/16	2	4⅝	2⅛	4/	2⅝
East Rands	13/9	4/	18/6	5/9	nil	10/3
Geduld	3½	1 13/16	3⅜	1¾	scrip	1⅞
Langlaagte	1 3/16	13/16	1¼	⅝	3/	16/
Meyer	5 5/16	4 5/16	5⅞	4 3/16	24/	4⅝
Modder "B."	9½	7½	9 11/16	5⅞	18/6	*1 11/16
New Modder	4½	3 3/16	5	3⅜	7/	3 13/16
Randfontein Central	23/	12/	25/9	10/6	nil	15/
Van Ryn Deep	6	3⅝	5½	3 7/16	9/6	3 15/16

* Four new for one old.

Of greater importance than the dividends for last year are the profit statements of the producing companies during the past six months. These reflect with fidelity the upward march of the gold premium, and it is upon these statistics that the principal hope for improvement in market conditions must rest. Taking the same companies as before, we give the profits from March to August this year :—

Share.	1920. March.	April.	May.	June.	July.	Aug.
	£	£	£	£	£	£
City Deep	39,297	35,705	25,520	38,202	55,183	73,455
Cons. Main Reef	10,422	8,412	11,473	13,300	19,199	20,367
Crown Mines	82,590	47,695	63,257	61,041	88,304	97,626
East Rands	†3,108	†12,718	7,079	2,697	8,215	38,303
Geduld	27,095	20,992	23,088	21,448	26,711	34,647
Langlaagte Estate	5,996	5,499	8,891	13,367	17,077	20,210
Meyer and Charlton	23,049	23,334	26,347	28,899	26,989	31,205
Modder "B"	48,223	43,621	49,030	57,894	73,268	91,758
New Modder	126,209	111,590	110,885	111,382	135,371	151,991
Randfontein Central	4,960	36,637	23,957	5,460	6,372	20,298
Van Ryn Deep	82,756	63,146	66,075	61,050	76,210	88,218

† Loss.

The examination of these profits is sufficient to show that the South African market has some ground for hopefulness in regard to the outlook. It has to be clearly remembered that the high price of gold must depend to a great extent upon the rate of American exchange. The market argument is that any fall in gold will bring with it a relative drop in machinery, explosives, and other costs, but this is very uncertain. South Africans, it may be concluded, offer considerable scope for speculation even in the days when mining on the Randt is claimed to be an almost mathematical science. There are enough elements of uncertainty to pique pleasantly the interest of the numbers of people who are interested in the Kaffir Circus.

South African Trade.—The National Bank of South Africa have received a cable giving the following figures of South Africa's foreign trade :—

Seven Months Ended July 31.

	1919. £	1920. £
Imports	29,405,146	50,555,261
Exports	27,992,413	32,050,796

The share of the United Kingdom in South Africa's import trade now is 55·5 per cent., against 44·4 per cent. in 1919. The Union mineral output for August is given as follows :—

	£
Gold 704,436 ounces, value	2,992,254
Diamonds 230,967 carats, value	1,374,544
Silver 74,505 ounces, value	18,530
Coal sales 986,123 tons, value	402,076
Tin 186 tons, value	31,840

A cable received by the Standard Bank of South Africa states :—"Except in Rhodesia, where trade continues good, business generally is sluggish. Owing to the irregularity of shipments orders placed 18 months ago are only just coming forward with recent indents, thus adding to the difficulties of importers." This cable also states that the Union statement of income and expenditure up to August 31st is considered very satisfactory, and it is estimated that the deficit is likely to be wiped out."

Oils, Fats, and Margarine.—A report has been issued by the Standing Committee on Trusts, dealing with oils, fats, and margarine. The committee "have no evidence to show that any agreements of the nature of a combination for controlling sources of supply or prices exist between the principal groups of manufacturers engaged in the trade, and are of the opinion that the divergent interests and aims of these groups are likely to ensure a continuance of sufficient competition to safeguard the public." There is no sign, they conclude, of any monopoly in the trade, but in case this danger should arise, they formulate a scheme devised to meet it. It is stated that abnormal profits were made when control was released, in which all branches of the trade shared. This resulted from the scarcity of tonnage and the great demand from the Continent. From April to July of this year, the committee finds, there was a rapidly declining market, with heavy losses in the trade. "The world supplies," it is stated, "have now become adequate, and so long as a reasonable amount of tonnage is available, it may be expected that prices will become practically stable."

Greek Currant Crop.—Greek exports of currants in 1919-20 are stated in *Burlumi's Annual Report* to have been 110,000 tons, as compared with 100,000 tons in the previous year. These exports were distributed as follows :—

To—	1918-19. Tons.	1919-20. Tons.
United Kingdom	86,000	70,000
U.S.A. and Canada	4,500	28,000
Holland	2,000	6,000
France and other countries	7,500	6,000
	100,000	110,000

The report referred to contains the following criticism of the control by the Food Ministry :—

On August 11th last year the British Food Minister decided to reimpose control on dried fruits, and the Government brokers invited the importers to make their offers to them. This method of purchasing continued up to October 20th, and about 50,000 tons of currants were shipped, out of which about 30,000 tons consisted of low rain damaged quality, masqueraded as produced in the well-known districts of Vostizza, Gulf, Patras, and Zante. The Food Ministry having fixed the prices of purchase of these growths, and being several shillings below the ruling price in Greece, the shippers, in order to secure the orders, had no alternative but to ship rubbish, in order to avoid a serious loss. These 50,000 tons were shipped, principally in bags, during the space of less than two months to the United Kingdom, when the Government suddenly ceased further purchases. Notwithstanding the low quality of the fruit, the luckless consumers had to pay 1s 2d per lb for their currants without discrimination of quality. This state of affairs lasted for several months, until the dried fruit trade had to protest very forcibly against the continuation of this senseless method of dealing in dried fruits.

Shipments of currants to the United Kingdom ceased on October 18th, but after the lifting of the control they were resumed in June, when the fruit was "found to be of excellent quality." It is estimated that some 63,000 tons were cleared for home consumption in the United Kingdom from the beginning of September, 1919, to the end of August, 1920, "notwithstanding," in the words of *Burlumi's Report*, "the atrocious quality of the fruit offered to the consumers." At the end of August, 1920, the stock of currants in the United Kingdom, as returned by the Board of Trade, was 13,650 tons, against 8,500 tons in 1919 and 1,400 tons in 1918. The Privileged Company distributed an ordinary dividend in respect of the year ended August 22, 1919, of 26 drachmas per share, equal to a little over 10 per cent. on the capital, while founders' shares received 7.10 drachmas per share. The company paid to the State £20,000 as a share of profits.

Chile's New President.—Señor don Arturo Alessandri, whose election as President of Chile has just been announced by cable, is of Italian extraction, and was born at Longaví, in the Department of Linares, in December, 1869, and is a barrister by profession. In 1897, when but 28 years of age, he became a Minister of State, with the portfolio of Industry and Public Works, and he is now described as the "recognised leader of the progressive forces of the Republic," and was nominated for the presidency by the advanced sections of the groups of

parties forming the Alianza Liberal. Owing to the extreme views of some of his supporters, and for other reasons, the new President has yet to win the confidence of the business community; but the responsibilities of office are often a steadying influence.

A Co-Partnership Congress.—Lord Robert Cecil has consented to open the proceedings of a three days' congress on Tuesday, October 26th. Among other speakers on the opening morning will be the Right Hon. J. H. Whitley, M.P., and Mr W. A. Appleton, C.B.E. Resolutions will be submitted on the Wednesday and Thursday declaring that in order to harmonise the essential unities of interest between capital and labour and to break down the present antagonism, a system of industry must be introduced in which the workers possess a share in the profits, a share in the capital, and a share in the control and responsibility. All particulars can be obtained from the secretary, Labour Co-partnership Association, 6 Bloomsbury square, W.C.

National Guilds League.—A course of five fortnightly lectures on "What I Think of National Guilds" will be held at the South place Institute, South place, Moorgate street, E.C., at 8 p.m. on Wednesdays, beginning October 13th. Tickets (course of five lectures 4s, reserved 7s 6d) may be obtained from the National Guilds League, 39 Cursitor street, E.C. 4 (orders should include postage). The lecturers include Captain Walter Elliott, M.P., Mr W. Gallacher, Bishop Gore, D.D., and Mr R. H. Tawney.

THE Board of Trade announce that Mr L. G. Killby, B.Sc. (Oxon), has been appointed secretary to the Empire Cotton Growing Committee.

A COURSE of five lectures on "The Coming Socialist Commonwealth of Great Britain" will be given at King's Hall, King street, Covent Garden, on Tuesdays and Fridays, at 8.30 p.m., beginning November 2, 1920, by Mr and Mrs Sidney Webb, concluding with a sixth lecture being a Commentary by Mr Bernard Shaw. Admission will be by ticket, which applications should be sent to the Fabian Society, 25 Tothill street, S.W. 1.

Oversea Correspondence.

FRANCE.—BRUSSELS CONFERENCE—IRON AND STEEL—FOOD SUPPLIES—THE TAX ON TURNOVER—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, October 5.

THE Brussels Conference, from a financial point of view, remains an enigma in Paris. It would be idle to disguise the fact that it has aroused here serious uneasiness. Certain accusations against the Conference are unjust. As yet, Paris opinion has refused in any way to commit itself. France, which, after all, is a country of great financiers, recognises that it is desirable that the basis of sound finance should be laid down before those who are working to intervene as doctors can apply specific remedies. The results of the Conference are being discussed in Paris perhaps with greater interest than anywhere else, because France has been taught that she must rely on the League of Nations as one of her principal safeguards. If the Financial Conference succeeds, the League of Nations will have gained an enormous access of strength, and if they fail to make practical and effective proposals it will have helped towards the downfall of the League of Nations; consequently the next three or four days are going to show whether the League of Nations is to be accepted universally as a vague academic idea of rather less importance than the old Hague Conference, or whether it is to have a chance of attempting something in the nature of reorganising the whole of Europe.

What is regarded here as an important step in the direction of giving State support to the French iron and steel interests takes the form of a decree, which is promulgated by the *Journal Officiel* to-day, fixing the price of metallurgical coke used henceforward for blast furnaces at the reduced figure of 175f per ton (as compared with 275f for coke utilised for other purposes). The new decree applies in principle only to coke manufactured in France and to German coke brought into the country by rail, the coke imported from overseas being utilised in other directions. The reduced price is for coke on the wagon, at the mine or the frontier, and will come into force simultaneously with the reduced prices at which the iron and steel producers have agreed to market their products. The French steel and iron firms announce that, thanks to this concession, they hope to be able to reduce the price of their product by 200f, and possibly 250f per ton, which will enable them to compete much more favourably, both at home and abroad, with British and other competitors. The effect on the British metallurgical trade, in view of the largely increased amount of mineral ores that have come into the hands of the French, in Alsace and elsewhere, as the result of the war, and in view of the new Franco-Belgian economic agreements and the changed situation of Luxemburg, cannot but be very appreciable. It goes without saying that the vastly improved position of France, from the iron and steel producing point of view, will be the subject of very close attention from now onwards on the part of the metallurgical interests of the rest of the world.

The effect of the promulgation of the decree reducing the price of coke made itself felt immediately, the price of steel girders and rails being quoted by some firms 250f a ton, or 20 per cent., lower the same day, while the unmanufactured product was reduced 200f a ton.

Figures that are now available show that the Government Revictualment Department resulted in a loss to the country, down to the end of the first half of the present year, of at least 6,000,000,000f. A profit was made during the twelve months on sugar (79,772,000f), coffee (over 51,000,000f), oleaginous seeds (12,000,000f), rice (6,000,000f), beans, lentils, maize, peas, saccharine, cocoa, &c. The account for wheat and other cereals shows the following losses:—

	Frs.
Wheat	921,329,000
Flour	178,796,000
Barley	18,019,000
Sarrasin	1,525,000
Oats	44,488,000
Haricots	25,414,000
Rye	12,428,000

The most serious feature of the situation is that, owing to various circumstances, the substantial profit that has been made on sugar since the date when the Government took over control of the food supply four years ago has been absorbed by the losses incurred in respect of other foodstuffs (other than cereals, on which a loss was inevitable), in respect of which there was every reason to anticipate large profits.

Owing to the continued rise in the price of fresh meat, which has now risen above 20f the kilo in the case of beefsteak, the Municipal Council has also organised the supply of large consignments of fresh fish, which are coming in daily from La Rochelle, Dieppe, Boulogne, Arcachon, and other ports. So far the consignments amount to about ten tons daily, but in the near future they are expected to reach double that quantity.

M. François-Marsal, the banker Finance Minister, is credited with having discovered a veritable philosopher's stone in the new tax on turnover. The yield is already proving unexpectedly satisfactory, and there appears to be every reason that it will produce a much greater amount than had been anticipated in the Budget estimates. The yield for August and September, the first two months of the new tax's existence, has been at the rate of over 3,000,000,000f per annum. Experience has shown that new

taxes as a rule practically never produce more than 75 per cent. of their full yield the first year. From this it is argued that by the end of next year the new tax will be showing a yield of about 5,000,000,000f a year, even if there is no increase in the national turnover. There is good reason to believe that the estimates for the Budget for 1921 are so well advanced, thanks to the energy of M. Marsal, that the new financial proposals will be laid before the Chamber during the coming autumn session. It is even possible the Finance Minister's hope that the Budget may be got through Parliament by the end of the year, or at least six months earlier than usual, may be fulfilled.

The indecision of the Bourse continues to reflect that of the public, the uncertainty of the coal strike in Great Britain having been an important factor of the week. The monthly settlement passed off without incident, the necessary payments being effected smoothly and easily, a point that shows the comparative absence at the present moment of speculation. The State Funds have remained relatively unchanged, the 3 per cents. standing at 54.20 and the 1920 5 per cents. at 100.37, as against 100.25. Japanese stock has been rather more sought after, the 1907 5 per cents. being at 116, as against 112. Banks have been firm, and are more in demand, Banque de Paris rising from 1,665 to 1,700. Petrol shares have been fluctuating, Mexican Eagles during the week rising from 595 to 625, and closing at 613. Royal Dutch is weaker at 37,850, as against 38,900, and Shell has been slightly depressed at 397, as against 405. Metallurgical undertakings continue to be rather depressed, Aciéries de France falling from 902 to 886, Chantiers de St Nazaire from 1,325 to 1,300, and Creusot from 3,420 to 3,100. Transports have on the whole been depressed, Métropolitan, for instance, dropping from 310 to 301 and Omnibus from 643 to 631. Chargeurs Réunis is back at 1,100 from 1,130. Tintos improved early in the week to 1,625, but closed at 1,585. Boleos remained stationary at 890, and Utahs improved during the week, finishing at 940.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

GERMANY. — TAXATION — FOREIGN TRADE — EXCHANGE AND BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, September 30.

No great expectations are here based upon the Brussels Conference. The course of the Conference so far has had a favourable effect on opinion, and to its apparent objectivity and fairness is ascribed the somewhat more favourable position of the mark exchange during the last week, but few here see signs of any executive action resulting. The more serious thinkers find the weakness of the Conference to lie in the implied assumption that Europe's financial condition is something abnormal and unreasonable, and therefore curable by reasonable measures, whereas, argue these thinkers, present financial conditions are, given the fact of the war, perfectly normal and inevitable, and a Conference will not undo the evil any more than it can undo the war. If this reasoning is right, the Conference, even if it were invested with the powers which its parent, the League of Nations, claims but never exercises, could at best do no more than to prevent the evil spreading further. In view of the fact that wars and civil wars are being merrily carried on, and that costlier armaments than ever are being piled up in order to make fresh wars, there seems small hope of that. The matter causes a certain cynical satisfaction to Germans, who were told that their elimination as war makers would result in universal peace. There are a great many not unintelligent Germans who believe that new wars and new waste are coming, and that a fresh cataclysm, with even greater suffering for everyone, is necessary before international equilibrium on a reasonable basis is attained. That the unimpeachable commonplaces of Brussels about the need for economy, the vice of inflation, and so on will have any effect upon the wasters and war makers at present in charge of Europe is not believed.

The Government has issued a revised list of the expected yield of the new taxes, and of the reformed old taxes, in the financial year 1920 (ending March, 1921) :— Income-tax 12 milliards, whereof two-thirds goes to States and municipalities. Corporation tax, 900 millions, where of two-thirds to States. Dividends and interest tax, 1.3 milliards. Emergency levy, 3½ milliards, of which 2.75 milliards is interest on spread-out capital payments and 750 millions capital payments. Total yield of tax now estimated at 45 milliards. Property tax, 100 millions. Succession tax, 620 millions, whereof 155 millions to States. Sales tax, 3.65 milliards, whereof 10 per cent. to States. Land acquisition tax, 220 millions, whereof half to States. Stamp duties, 400 millions. Railway tax, 630 millions. Tax on increment of property, 4½ milliards. Customs, 2½ milliards. Coal tax, 4 milliards. Tobacco tax, 1 milliard. Beer tax, 130 millions. Wine tax, 250 millions; champagne tax, 100 millions. Brandy monopoly, 320 millions.

The private banks have issued a pronouncement against the Government plan to organise, independently of them, industrial credit. The original plan to create a Federal Industrial Bank with this aim has been abandoned, and a scheme substituted for granting industrial credit in connection with the existing "Girozentrale." This institution works mainly with municipal and savings bank capital. The private banks, which opposed the Federal Industrial Bank scheme, oppose equally the new plan, denying that they are not themselves in a position to give industrial credit where justified, and declaring that the Government's scheme will injure their credit both at home and abroad.

For the first time since 1914 foreign trade statistics have been issued. In 1919 Germany imported goods valued at 32,376,000,000 marks, and exported only 10,057,000,000 marks, showing an import excess of 22,319,000,000 marks. The exports include reparation deliveries of unstated amount, so that the exact effect of this trade on the foreign payment balance is not clear. In the first five months of the present year exports (again

including reparation deliveries) rose rapidly, while imports tended to decline :—

(Million Marks.)

	Imports.	Exports.	Import Excess.	Export Excess.
January	6,560	3,219	3,341	..
February	5,932	4,262	1,670	..
March	5,683	4,216	1,467	..
April	4,768	5,344	..	576
May	5,537	6,647	..	1,110

No figures later than May are available. The Ministry of Industry has this week again reduced some of the export duties, setting the duties on toys at 2 per cent.; unupholstered furniture, 3 per cent.; lamps and lanterns, 1 per cent.; jewellery of base metals, 3 per cent.; railway springs, signal parts, and similar goods, 3 per cent.; wire rods, barbed wire, wire net, nails and tacks, 2 per cent.; locomotive boilers, 4 per cent.; and iron ploughs, 2 per cent. The duties on some zinc products have also been cut down.

The Bourse, in harmony with the relatively slight exchange movement of the last few days, has been undecided, but inclined to firmness. On the 25th, the 10 leading loans and 25 leading stocks and loans which I have hitherto taken for comparison, reached 14,150 as against 9,557 at beginning of June, and as against 13,722 at apex of the February-March boom. Stocks have risen since June 1st almost exactly 50 per cent., and loans 25 per cent. Of 581 industrial, mining, and shipping stocks only 12 are quoted under par, and only 75 under 200. About 200 are quoted between 200 and 300, about 150 more between 300 and 400, and about 70 between 400 and 500. Eight are quoted at over 1,000. Nearly all banking stocks sell at between 100 and 200. The industrial stocks no longer sell on the Bourse according to their dividends, but according to their liquidation value in the present depreciated currency; thus there are a few industrial stocks which pay only 15 per cent. and have no prospect of paying more, which sell at around 700-800 per cent. of their nominal value. A few days back, and again to-day, there was considerable activity in banking stocks, based on reports of the Deutsche Bank's absorption of the Hannoversche Bank, and of its expected increase of capital. The other factor making for activity was the transaction by which the Steaua Romana Oil Company, the greatest European concern of its kind outside Russia, has passed into Anglo-Franco-Roumanian hands. The controller of the Steaua Romana has been the Deutsche Petroleum A.G., of Berlin, in connection with the Deutsche Bank, and 70,000,000 Swiss francs is the price to be paid for the 100,002 shares (out of 200,000) held by the Germans. The Steaua Romana has been an object of frantic speculation all this year. To-day its stock rose by 110 points to 2,120. Stock in the other big German oil company, Deutsche Erdoel, which has of late been buying up brown coal mines for purposes of tar-oil distillation, has also been active on report of a plan of fusion with the Deutsche Petroleum Company.

AUSTRIA.—FOOD SUPPLY—CREDITS—AN INTERNAL LOAN—THE SOUTHERN RAILWAY.

(FROM OUR CORRESPONDENT.)

VIENNA, October 3.

THE population of Austria is not very well informed with regard to economic affairs. The distress and the misery of these last years have made them so apathetic that they have lost all interest even in inner political questions. If it were not for this apathy they would pay much more attention to the constitution of their country. Shortly after the breakdown a National Assembly was elected, whose chief task it was to work out a constitution adapted to the new conditions. After long discussions, the Social Democrats and the Christian Socialists, who, united in a Coalition, form the new Government of Austria, worked out a new constitution, which is going to be approved by the National Assembly as a compromise between the two parties. This constitution chiefly tends to break the central organisation of the State, establishing a more federal character. However, this tendency is chiefly confined to the internal administration, whereas the decisions concerning all economic and financial matters still rest with the federal Government. New elections will take place in the middle of October, but they will hardly bring about a new construction of the parties, considering the economic structure of the population of Austria, which consists of two groups: the industrial, consequently social democratic population of Vienna and its surroundings, and the small agriculturists of the rest of the territory, who are naturally bourgeois. It has often been mentioned that the Austrian problem is only one of Vienna, with its two million inhabitants. The remaining three or four millions of the Republic Austria can, if necessary, live on the products of the soil, but the Viennese population must starve if they are not supplied with foodstuffs from abroad. Thanks to the help of the Entente, Vienna was fairly well provided with victuals during the summer. But the credits granted by the Entente are nearly exhausted, and the population is forced to eat bread which consists half of maize; the ration of cooking flour has also been diminished, and at the same time the quality of the flour has been depreciated. It is true that provisions from the Near East—viz., Jugoslavia, Roumania, and Bulgaria—have been secured, but they will be exhausted within the first months of next year. Besides this, the prices which Austria must pay to Jugoslavia are higher than the world-market prices. The krone, which had already gone down to 2.40 (100 kronen—2f 40c Zurich), has gone up again in the last few days; but it is obvious that the krone will still go down if such forced prices were further to be paid for the necessary provisions. It is, therefore, comprehensible that the population of Austria sets all its confidence in the work of the Reparation Commission.

A few days ago some news was published reporting that Sir William Goode, President of the Austrian Section of the Reparation Commission, has worked out a vast scheme for the economic reconstruction of Austria. No details have been published, but everyone who is in touch with the Reparation Commission will appreciate the indefatigable and assiduous work by which Sir William Goode tries to solve the Austrian problem, which many people consider to be hopeless. In view of the fact that even economically strong countries require enormous credits, it does not seem possible to help Austria unless the Governments of the great Entente Powers grant this country help directly, and not by means of private credits. It is hardly likely that Austria will ever be granted private credits without the help of the Entente. At the financial conference in Brussels, the Secretary of State for Finance has calculated the deficit of the present budget year at more than 12 milliards of kronen. But doubtless the deficit will be increased if the rate of exchange keeps on falling.

An attempt has now been made to cover at least part of the deficit by an internal loan. The Secretary of State for Finance has issued 6 per cent. bonds, payable in six years. The holders of such bonds can at any time give three months' notice, so that they may dispose of their money whenever they want to. The Bourse is more stable since the fall of the krone. It is, of course, influenced by the fluctuations of the krone, but there is always a tendency to keep the shares of industrial and commercial enterprises above the general kronen currency. The news that the Italian Government intends to acquire part of the Southern Railway belonging to the territory ceded by Austria has again drawn attention to the shares and bonds of this railway, which, however, has big debts in francs, not having paid any interest on these bonds for the last six years. Industrials as well as merchants are deeply interested in the question how to pay the pre-war debts to England and France. This problem can only be solved if the State supports the debtors, who would otherwise be greatly prejudiced. The Austrian Government is expected to make propositions in this direction. The agreements with England and France only regulate the relations with foreign countries, a special law will have to enter into the question whether the Austrian State will assist her subjects.

POLAND.—TRADE CONVENTION WITH FRANCE—CANADIAN CREDIT FOR POLISH RAILWAYS—THE BOARD OF EXCHANGE—POLISH NATIONAL BANK—MINIMUM PRICES—TRADE REGULATION—PREMIUM BONDS.

(FROM OUR CORRESPONDENT.)

WARSAW, September 27.

IN an interview with a correspondent of a Warsaw paper, Mr Grabski, the Finance Minister, declared in Paris that Poland will sign shortly a trade convention with France. This country will supply the Polish Army with arms, munitions, &c., while Poland will give in exchange 30,000 tons of sugar and 10,000 wagons of petroleum. Such an obligation is a very heavy burden for Poland. In 1919 the whole export of petroleum amounted to 5,711 wagons, and actually the maximum exporting capacity does not surpass 20,000 wagons. Poland has put half of it at the disposal of France.

As regards sugar, the territories which to-day form the Polish Republic before the war exported about 450,000 tons. Actually, however, the production has diminished very much in consequence of the lack of manuring, the destruction of sugar refineries, &c., and last season gave only a very poor crop. It is estimated that the whole sugar production amounted in 1919-20 to about 100,000 tons. This is hardly sufficient for the home consumption, and as this year's campaign will not be much better, the export of 30,000 tons to France will affect the Polish consumer severely. The Polish-French convention will be for one year.

It is announced that during his stay in Paris Mr Grabski has succeeded in obtaining a Canadian credit for the purchase of railway materials amounting to 15-25 million dollars. This credit will contribute greatly to the reconstruction of Polish economic life, which is suffering very much from the lack of rolling stock. According to statistics published by the Ministry of Railways, Poland has 3,744 locomotives, 8,165 wagons for passengers, and 75,938 for goods. This is only about 50 per cent. of the quantity which would be necessary for a normal working of the railway system.

The Board of Exchange, which has controlled the foreign exchanges since August 14th, did not succeed in arresting the downward tendency of the Polish mark. It has been proved once more that it is impossible to pour new milliards of paper marks into the market and at the same time to stabilise the exchanges. The English pound, which stood on August 18th, when the Board began its working, at 800-820, is now officially quoted 905-935. Below are shown the quotations for the other principal foreign exchanges at the two respective dates :—

	August 18.		September 24.
French francs	15·75—16·25	..	17·75—18·25
Swiss francs	37—37·75	..	41·75—42·65
American dollars	212—208	..	255—275
German marks	480—488	..	440—460

With the exception of German marks, all exchanges have advanced very rapidly.

The Board of Exchange, while it did not succeed in stabilising the exchanges, has rendered all normal working of foreign trade impossible. The quantity of foreign bills which Poland obtains by her exports is quite insufficient to cover the expenses of her imports, and it was always necessary to obtain by speculative sales of Polish marks abroad the necessary means for the payment of foreign goods. This source has now been more or less completely closed, and the whole trade is disorganised. The Federation of Bankers and of Manufacturers has formulated a strong protest against the methods adapted by the Board of Exchange.

The Bolshevist invasion has produced in Poland a run on the banks and the breakdown of the whole credit system. The Polish National Bank, which until recently was exclusively providing the Government with the money for the financing of the war, has been forced by the events to supply commerce and industry with the credit which was refused to them by the other banks. This evolution is very well reflected by the returns of the Polish National Bank, as shown below (million marks) :—

„ August, 1920	465.8	..	39.625	..	1,238.6	..	31.086
September 10, 1920	419.0	..	39.625	..	1,351.3	..	31.792

* The circulation for the year 1919 has been given by me in my correspondence of March 30th (*Economist*, April 17th, p. 824).

Until May the amount of discounted bills and of loans to private firms was very small. Since then it began to rise rapidly. The circulation of Polish marks increased in June by 3.8, in July by 4.6, and in August by 4.8 milliards.

A new Act has been passed recently by the Diet establishing special Chambers of Import and Export for the different branches of trade. Licences for export are given by the Chambers only under the condition that the goods are not sold below a fixed minimum price. The general rules to which foreign trade is subject are established by the Chief Office of Exports and Imports, a department of the Ministry of Industry and Trade. The office is determining the articles and the quantities of goods which can be exported. This Office of Exports and Imports has also the right to dictate to special branches of trade, which are importing great quantities of raw materials, the minimum quantities of manufactured goods which they must export for the purpose of providing the necessary amount of foreign bills.

The subscription list for the 5 per cent. Reconstruction Loan will be closed on October 1st. The total amount subscribed surpasses 6 milliard marks. The Ministry of Finance is floating now 5 milliard marks premium bonds, bearing interest at 4 per cent. The holders will be allowed to participate in drawings for substantial prizes. During the first 20 years every week a bond giving a prize of one million marks will be drawn. During the next 20 years (1940-1960) the bonds will be redeemed at par. It is expected that this loan will have a great success among the peasants, who will be attracted by the possibility of winning the prize of one million marks.

SWEDEN. — A SHIPPING BOND ISSUE — TIMBER EXPORTS AND CREDITS—EXCHANGES.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, Sepember 29.

SOME important loans have been taken up lately. One of the leading shipping companies, the Rederi A.B. Svenska Lloyd, has through the intermediary of the Skandinaviska Kreditaktiebolaget and Stockholms Enskilda Bank opened the subscription for a 12.5 million kr debenture loan at par, with 8 per cent. per annum. Thanks to this high rate of interest this loan was sold out in two days. As surety the company has hypothecated its fleet of 125,000 tons d.w., calculated at a value of 110 kr per t.d.w., and the loan runs over a period of 15 years, with the right of conversion from 1925 in such a way that the repayment is made annually by a lottery for one-tenth of the loan. These annual amortisations can be increased above the prescribed tenth of the loan, but for bonds repaid above the said limit the borrower pays at the rate of 110 kr. This is the first time in Sweden a whole shipping fleet has been used as mortgage, and in view of the fact that the fleet in this particular case stands booked at 35.3 million kr, while marine experts give it a selling value at to-day's prices of 56.5 million kr, calculated on an average value of 425 kr per d.w. ton, the surety in question would appear ample enough. The loan will be used for the payment of contracts for fresh tonnage of in all 28,000 tons d.w. tonnage, contracted for at home and abroad. Stockholm Tramways have also taken up a loan of 10 million kr at 7 per cent. interest per annum, repayable during 1921-45 through an annual lottery. A circular issued by the Finance Council at the end of last week aiming at the prohibition of using bills for the payment

of the timber exports from Sweden to England and other countries, a method which has been practised to a great extent during the present year, has been much discussed. The exporters seem to have kept the bills in their portfolios instead of discounting them, and the capital required for their operations has been drawn from their bank credits. It is understood that this practice to a great degree accounts for the non-appearance of the expected relief in the money market. Henceforth bank credits should not be granted to exporters who are pursuing this policy. The circular further implores the banks to exercise a still stronger abstinence in granting foreign credits, and the traders in general to restrict importations as much as possible. Although the last State Bank report of 25th inst. indicates a slightly improved position, with an increase in note reserve of nearly 100 million kr and the circulation of notes down at 708.8 million kr, the situation is by no means reassuring, as will be judged from the fact that all foreign exchange rates have considerably advanced during the week, £ closing at 17.50, dollar 4.99, Paris francs 34, Reichsmark 8.35, Danish crowns 70.50, Norwegian crowns 71.

Letters to the Editor.

CURRENCY AND PRICES.

TO THE EDITOR OF THE ECONOMIST.

Sir,—I am glad to see that your correspondent, Mr A. G. Boissevain, ventures to express his disbelief in the "quantity theory of money," even at the risk of being considered a bore. I certainly think that theory, even in its most approved form, is nothing more than a fatuous truism, which does not explain the cause of any phenomena whatever. I agree with Mr Boissevain in this, and also the view that the chief evil in deflation or other attempts to "potter" with currency, is that it misleads public judgment as to what is the true cause and effect of fluctuations in prices and trade. But I still venture to point out a little difference in my view of the prime cause of the present difficulties.

In the first place, it is, I think, possible to use the word inflation in rather a different sense from the one criticised by Mr Boissevain. We may speak of an inflation of prices without implying an inflation of currency as its cause; any increase in the latter would, as Mr Boissevain rightly says, be a consequence. It is the cause of this inflation of prices that I desire to point out, and I do not think the desire of the wage-earners and everyone else to consume more can usefully be regarded as the prime cause or "mover" of inflation, because desire must be regarded as a static condition or stress, which has always existed and would always send prices and wages up to infinity if other forces did not prevent it from so doing. The question then is: What pottering with currency at the beginning of the war allowed this static stress to become a dynamic force, sending prices up to the present phenomenal level?

While the banks were confronted with the necessity of meeting their liabilities in gold when demanded, they were obliged to measure the value of their assets and securities by the actual gold they would purchase. If commodity prices went too high, gold producing would become unprofitable, and less gold would be deposited at the banks. Credit would then be restricted to protect gold reserves, and prices made to fall through stoppage of production, unemployment, and increased competition to get work. By this process the labour cost value of commodity was actually determined by the labour cost value of gold, and a real standard of value established. Wages could not be put up, because prices could not rise above the gold value check (i.e., labour value, not quantity of gold). So that a rise of wages always caused unemployment, and the increased competition for work brought wages down again.

With the introduction of a paper currency in place of a gold one this gold check on values vanished, prices and wages can go up and currency become debased—value has, in fact, got lost; hence the desirability of getting back to a gold or other real standard of value. Still, I think with Mr Boissevain, that a Government cannot by

"pottering" with currency put prices on their right level and save us from loss. A child may put a match to gunpowder, but to catch the products of that combustion and convert them back into gunpowder might tax the powers of the greatest chemist. Nature can do this with man's assistance, and I believe natural causes are beginning to bring back prices to their natural level by the unemployment method.

I do not look forward to this process with any pleasure, and it seems to me a little inadequate to call for more production and less waste to soften our fall to earth, while we are allowing a great number of workers to be kept idle because their employers cannot sell the stock of goods they have already made. I think Mr Boissevain will find a trace of madness in that also. The only thing that could mitigate the shock of our descent, it seems to me, would be a really sound and enlightening theory of prices and wages. One that would enable all men to see our social problems in their true proportions.—Yours faithfully,

Albert Wallis.

Westacre, Kettering, September 20th, 1920.

INDIAN EXCHANGE.

TO THE EDITOR OF THE ECONOMIST.

Sir,—In his letter published in your last number, "C. S. C." expresses the opinion that the Indian Finance Minister has based the Indian Coinage Bill on the assumption that the sterling price of silver has risen without giving any consideration to the fact that sterling has depreciated in terms of gold. If the Finance Minister did not draw direct attention to this depreciation when introducing the Bill, it is probably because it has had the full attention of the Legislative Council on a previous occasion. His speech under reference, as I understand it, is a condensed summary of what has been previously fully discussed in the Council with a more detailed account of subsequent events. The difference between the sterling and the gold price of silver is so fully realised in India that no misunderstanding is possible. The early policy of the Government in selling Reverse Councils at the gold parity rate focussed attention on the point, besides proving the Government's full cognisance of it. I may, however, perhaps give a short quotation from a Government blue book ("Moral and Material Progress and Condition of India During the Year 1919") to prove my point. "The result of the low exchange value in America of the pound sterling and the rapid rise in the price of silver, was to necessitate the raising of the exchange value of the rupee." As American currency is still on a gold basis, the American exchange is, I believe, generally recognised as a fair barometer of sterling depreciation.

I think the above explains the lack of detail in the quotation from the Finance Minister's speech given by your correspondent. Now, to take the figures he refers to—If, when the exchange parity was Rs. 15 to the £1, the melting point of silver was 43d gold; the melting point in sterling may presumably be calculated on the basis of American exchange. At an exchange of 3.65, £1 Bradbury or sterling is equal to roughly £¾ gold, and 57d sterling would be about the equivalent of 43d gold, in which case the Finance Minister was correct in stating that, with silver at a price of 61d sterling, a return to the old ratio of 15 rupees to £1 would necessi-

tate the re-introduction of the embargo on the export of silver.

With regard to the last paragraph of your correspondent's letter, I believe the Government of India have expressly stated that they do not anticipate any sovereigns being tendered at their Treasuries for exchange into rupees, so long as the scarcity of gold keeps it at an artificial value owing to the keen demand for it for religious and marriage ceremonies. The rupee has been linked to gold and not to sterling because of the depreciation in the latter, to which your correspondent refers, and not with the object of attracting gold to the Government Treasuries. The Currency Commission were of the opinion that the ultimate result would be a smaller inflation in prices than is existent in sterling-using countries, and the recent announcement by the Government of India referring to the suspension of the sale of Reverse Councils and to the contraction which had been effected in the internal currency, would point to this result. If, however, the balance of trade had remained in favour of India, as the Commission had reason to expect, in view of the fact that India's exports are for the most part raw materials, for which demand is fairly constant, exchange might have remained at gold parity, as was intended. Gold would then have flowed more freely into the country in adjustment of the trade balance, and the internal premium on it would, at any rate, have been considerably reduced. When the trade balance returns to its normal condition—viz., in favour of India—this tendency may be looked for.

I should like to take this opportunity of amplifying one point in the letter of mine which you were good enough to publish in your last issue. As India is a large exporter of manufactured jute, her greater internal consumption of raw jute, owing to the new mills recently built, will not detrimentally affect her balance of trade through the lessened export of raw jute which may result, as might be assumed from my letter. On the contrary, the enhanced value of the manufactured articles over the raw product may, of course, increase her export total.—I am, Sir, yours truly, E. P. Stocker.

Manchester, October 3rd, 1920.

THE TRIUMPH OF NATIONALISATION.

TO THE EDITOR OF THE ECONOMIST.

Sir,—Sir Leo Chiozza Money has written a book on the triumph of nationalisation, and has met your reviewer's justified criticism as well as he could. However, Sir Leo and his friends should know that nationalisation, wherever and whenever tried, has proved a ghastly failure. Sir Leo tries to prove the success of Government management of economic undertakings by telling us of the war achievements of the Government. War is an abnormal condition. We therefore need not consider seriously his arguments. The question is not whether national management is superior to private management in war time, but whether it is superior in peace time.

Formerly Sir Leo and other advocates of nationalisation held up to our admiration the Prussian State railways. They praised them to the skies, but they have become curiously silent with regard to that gigantic experiment in nationalisation. Their judicious silence is due to the fact that nationalisation has proved a terrible failure in the case of these railways. According to the German Minister of Finance, they will cause for the present year a loss to the State of at least 16,000,000,000 marks, a sum considerably larger than their entire capital, a sum considerably larger than their total profits since the time when the first pair of rails was laid. Notwithstanding repeated increases in freights and fares, the railway deficit of Germany is growing, and is ruining the nation. For the current year the German National Post Office will cause a loss of at least 2,000,000,000 marks—again an amount considerably larger than all the profits yielded by that undertaking since its beginning. Other nationalised and municipalised undertakings of Germany are in a similar position. Nationalisation was a success in Germany as long as the country was governed by a bureaucratic absolutism. Democracy and nationalisation do not go together. Many prominent Germans are in despair at the losses caused by their nationalised undertakings, and would gladly sell them for whatever they will fetch.—I am, Sir, your obedient servant,

J. Ellis Barker.

Albion Cottage, Fortis Green, East Finchley, N. 2,
October 5th, 1920.

SIR LEO'S TRIUMPH.

TO THE EDITOR OF THE ECONOMIST.

Sir,—Sir Leo Chiozza Money tells us that "the wool deals of the Government are running at a very substantial profit," and evidently regards this result as a shining example of the super-excellence of the Government trading. But what are the real facts? Before the war half the production of the wool and woollen industries was consumed at home, and the other half went abroad. The proportions are at present little altered. Under Government control all concerned in the trade got accustomed to huge profits and huge wages. But that was only possible with high prices. But now neither the home consumer nor the foreigner will pay the prices, and, as the trade will not take less money, there is a deadlock. Government control demoralised everyone connected with the trade, even the consumer, who paid what he was asked when he had the money. But now he hasn't the money. Hence the trade set-back. That is, briefly, the tale of Government wool control. Probably it is the tale, with slight variations, of other industries that the Government controlled, and we see the net result in trade stagnation. Of course, the E.P.D. and the demands of the working classes get the blame, and while I don't wish to whitewash either of those two causes there is no good in exaggerating some causes and ignoring others quite as serious.

Besides, it is hardly safe yet to say too much about the wool control profits. The Government still holds huge stocks which the trade will not buy at the reserve prices, and the Government may yet have to unload at a loss. The general result of the Government control of industry has been a huge indirect tax upon the consumer, both home and foreign, who usually kicks at last. It does not require a genius to make a balance-sheet success of a monopoly.—I am, &c., R. H. K. Clark.

Bradford, Yorks, October 4th, 1920.

SWITZERLAND AND HOSPITALS.

TO THE EDITOR OF THE ECONOMIST.

Sir,—In a letter from your Paris correspondent, which appeared in the *Economist* of September 18th, I was surprised to find an echo of the *legend* that Switzerland had prevented the establishment of military hospitals in Upper Savoy during the war.

After verifying documents and obtaining information on this subject, I am authorised to state that Switzerland never opposed this measure. It was France herself, who, at the outset, in September, 1914, spontaneously renounced the installation of military hospitals in the neutralised zone of Savoy, and notified the Swiss Government of this decision.

How could anyone seriously believe Switzerland capable of refusing wounded soldiers admission to the zones of Savoy, whilst at the same time she was taking the initiative for the exchange of the wounded of both sides and hospitalising them in Switzerland itself?

Trusting you will see your way to publish this rectification,—I am, Sir, yours very truly,

Dr A. Latt, Secretary,
Nouvelle Société Helvétique, 28 Red Lion square,
London, W.C. 1, October 6th, 1920.

Books and Publications.

THE WORLD WAR.

"The First World War, 1914 to 1918." Personal Experience of Lieut.-Col. C. à Court Repington. In two volumes. (London) Constable and Co., Limited. 42s net.

Lieut.-Col. Repington, formerly the military critic for the *Times*, and later for the *Morning Post*, has given in these two volumes his private diary during the Great War. The book is packed full of interesting and im-

portant matter recording the big acts and petty deeds of most of the public men who were in the limelight during the war—in a style reminiscent of the estimable Pepys. It is difficult to find a dull passage in the two volumes, though some of the stories told are only suitable for strong palates. But most people who are jealous of the confidence that is placed in leading journalists will wonder whether the book ought ever to have been written, and will be certain that it ought not to have been published for at least twenty years.

PAPER MONEY.

"Le Papier Monnaie." By G. Subercaseaux. (Paris) M. Giard and E. Brière. 16 francs.

THE scheme of this work is ambitious. The author sets out to write a complete account of paper money in all countries and at all times. He has equipped himself for the task by a detailed study of the monetary history of the world, and he is qualified not merely as a theoretical economist, but also by practical experience at the head of the Chilian Treasury. He divides his work into three parts, the origins, the life, and the death of paper systems. The first and last are primarily of historical interest, and they suffer from the fact that, though this work was only recently published, it does not take cognisance of anything that has happened since about 1912. The second part gives us the general economic theories which have resulted from an inductive study of the historical evidence. For Englishmen the book has certainly one great attraction, namely, that it covers a field which is to a considerable extent unfamiliar. Peru, Chile, Portugal, and China furnish a variety of interesting examples, and the whole problem is approached from a distinctly extra-European angle. In fact, the author does not seem to be well acquainted with English sources; most of the English quotations are full of mistakes, and the meaning of "gold point" is not understood.

THE JUST PEACE?

"La Juste Paix; ou la Vérité sur le Traité de Versailles." By Raphael-Georges Lévy. (Paris) Plon-Nourritt et Cie., 8 Rue Garancière. 7 francs.

ONE might have expected that experience and heredity would combine to induce the author of this book to take a severely practical view of the financial aspects of the Peace. But he has, in fact, chosen to contribute to the *Revue des Deux Mondes,* and to republish in this volume, a study of the subject which, though it perhaps conforms to the highest standards of senatorial oratory, is not very helpful to economists. The book is intended for the most part to be a refutation of Mr Keynes' "Economic Consequences of the Peace." Whatever one may think about the possibility of making an effective reply to Mr Keynes' arguments, it is tolerably certain that he cannot be refuted by a rhapsody, nor even by simple asseveration. The moral justification of the reparation clauses cannot usefully be discussed if the fact that they include damage not suffered by civilians is simply ignored; and financial conclusions, even in rhetorical debate, require to be based on sounder premisses than, for example, the airy assumption that for the internal expenditure of the German Government, "three milliards of francs should be sufficient, since that is the figure for which Germany budgeted a dozen years ago."

BOOKS RECEIVED.

Some Aspects of the Inequality of Incomes in Modern Communities. By Hugh Dalton. (London) George Routledge and Sons, Limited. 10s 6d net.

International Labour Legislation. By H. J. W. Hetherington. (London) Methuen and Co., Limited. 6s net.

An analysis is given of Part XIII. of the Treaty of Versailles, which establishes, as part of the equipment of the League of Nations, an international labour organisation, and the proceedings and enactments of the first International Labour Conference at Washington are examined.

Modern Tariff History. Germany, United States, France. By Percy Ashley. Third Edition. (London) John Murray. 16s net.

The Budget and Responsible Government. By Frederick A. Cleveland and Arthur Eugene Buck. With Introduction by William Howard Taft. (New York) The Macmillan Company. $3.

England and the New Era. By Brougham Villiers. (London) T. Fisher Unwin, Limited. 12s 6d.

Industrial Democracy. By Sidney and Beatrice Webb. Edition of 1920, with new Introduction. (London) Longmans, Green, and Co. 21s net.

Year Book of the Netherlands East Indies. Edition 1920.

This is a beautifully illustrated volume, compiled by the Sub-Department of Commerce of the Department of Agriculture, Industry, and Commerce, at Buitenzorg, Java. It is printed in English, and full of interesting matter.

Supreme Economic Council. Monthly Bulletin of Statistics Vol. II. No. 1. Including figures received during the period from August 1st to September 16, 1920. (London) His Majesty's Stationery Office.

Annuaire International de Statistique Agricole, 1917 et 1918 (Rome) L'Institut International d'Agriculture.

Traders interested in the Foreign Markets are invited to correspond with
THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
October 13.	October 14.

STOCK EXCHANGE markets have been subject to a variety of conflicting currents during the week now ended. One of the principal influences at work has been the reported selling from abroad for account of Frenchmen anxious to obtain money to be used for subscription to the new French Loan that is to be offered in 10 days' time. It may be doubted whether all the selling has been Continental. Evidence from the manufacturing districts of this country points to the growing difficulty of financing business, and a good deal of stock has certainly been sold by people who require the money for trade purposes over here. Gilt-edged stocks gave way on the announcement of a forthcoming issue of £15,000,000 Local Loans 3 per cent. stock, to be offered at 50. The underwriting commission is said to be ½ per cent. The issue was unexpected.

A quiet inquiry is reported for Home Railway debenture and other prior-charge stocks. In Colonials the tendency is not so good, and the reported threats against outside capital by Mr Theodore, the Premier of Queensland, are not conducive to confidence in Australian securities generally. Brazilian bonds have been inclined to weaken, owing to the movements of the milreis. Argentine bonds, on the other hand, advanced materially, the 4 per cent. issues being especially wanted. Japanese have been moving in sympathy with the dollar rate of exchange, and French bonds are overshadowed by the forthcoming French loan. A modest recovery occurred in some of

the Russian bonds, government and municipal, on the idea that the Soviet Government is weakening. Mexicans, after being heavy, turned better towards the end of the week.

The Home Railway market was cheered at first by the postponement for another fortnight of the handing in of strike notices, but on the development of the implacable attitude on the part of some of the miners, prices dropped again. Undergrounds keep fairly good, thanks to the release of the District Railway from Government control, and the fare-raising on the combined systems. Scottish stocks enjoyed a little support from the North during the early part of the week, but here again, as in the case of the Southern passenger stocks, the more threatening aspect of the miners' attitude caused declines later. Canadian Pacifics have been up to 184, failing, however, to hold the full extent of the rise. Grand Trunks are lifeless as ever, and Mexican Rails fail to derive any benefit from publication of the batch of traffic receipts from April to the end of last month. Argentine railway stocks have gone back, and Brazilians are also out of favour, San Paulos, Leopoldinas, and Great Western of Brazil all showing falls.

Rubber shares, after a brief spasm of firmness, fell back again in sympathy with the drop in the raw produce. There has been fairly persistent selling, some of it said to be on behalf of large holders who require the money for other purposes. Moreover, the immediate outlook for the industry does not encourage purchases. Amongst oil shares, several good spots stand out in the week's picture. A brisk rise in Trinidad Centrals followed the circulation of optimistic particulars concerning the company, and Mexican Eagles further advanced, in consequence of the expectation that the new issue at a low price is to be made this month. Burmahs, on the other hand, have been a heavier market, and Royal Dutch suffered from selling said to emanate from Holland. The market continues to be the theatre of an active business every day, and promptly reflects the general tendency, whether good or otherwise, of the public's mood. In the textile group a general easing off occurred, consequent upon the uncertain outlook for the industry.

Motor shares have been dull, by reason of the "cuts" in prices advertised by some of the principal firms. Another big issue of capital by Levers had no effect upon the company's existing shares. The shipping market was disposed to be harder, because of the recovery in freight-rates. Insurance shares have lost a good deal of their buoyancy, and prices shed part of the improvement recently gained. The banking market is quiet. Some of the tobacco shares hardened upon repetition of the gossip that the price of tobacco is to be advanced. Dunlops have fallen several shillings, on the news that the underwriters of the new issue were left with about 50 per cent. of their obligations, and African and Easterns gave way upon further profit-taking sales by those who regard unfavourably the opposition raised to the suggested arrangement with Levers. Of the less familiar industrial shares, the tendency is for prices to drift back to a level at which the yield is at least 10 per cent. on the money on the basis of the last dividends. The Stock Exchange managers have declared an interim dividend of £3 a share, less tax, payable on November 2nd, being at the same rate as that of 12 months ago. The price of the shares is about 110.

The Kaffir market started off well, but the improvement was checked by a good deal of the selling attributed to Paris. There is still little public business doing in the market, and the activity is confined to the professional and semi-professional brigades. The main feature of the week amongst mining shares is the sensational jump and reaction in Esperanzas. The price touched $2\frac{9}{16}$ and $2\frac{1}{8}$ within an hour on Wednesday morning. Anticipation has remained keyed up to a high pitch by the developments on the property. Broken Hills are unaffected by the practical promise that work will be resumed on the Barrier field in January. Russo-Asiastics had a mild spurt, because of the anticipation that early re-establishment of trade relations with Russia cannot fail to benefit companies already on the spot. Interest in Mexican mining shares centred chiefly in the Esperanza excitement, but El Oros obtained a faint reflection of the activity in the latter. The tin groups are exceedingly quiet, and no recoveries occurred amongst copper shares, while in West Africans it is scarcely an exaggeration to say that the market is quite lifeless.

To complete our record of new issues, company secretaries are requested to furnish us with copies of new prospectuses. Our readers can also assist by forwarding copies of prospectuses which may fall into their hands.

NEW ISSUES.

5-15 Year Treasury Bonds, repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. These are still on offer. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

London County Council.—Issue of £5,000,000 6 per cent. local bonds for housing. Registered bonds for £5 each or multiples thereof are obtainable for terms of 5, 10, or 15 years, at applicant's choice. Six per cent. interest and full repayment when due are guaranteed by the London County Council on the security of the County of London's rates. Interest payable each September 30th and March 31st. The money will be applied solely for the purpose of housing schemes approved by the Government, and in particular to finance the housing schemes of the Metropolitan Borough Councils. Income-tax will not be deducted at source where the holding in any one name does not exceed £100. Trustees are authorised by the Trustee Act, 1893, to invest funds in these bonds unless expressly forbidden by the instrument (if any) creating the trust. Advertisements appearing in the daily papers state that £2,250,000 of these bonds have been issued. No mention is made in the prospectus as to a Stock Exchange quotation. It will be interesting to know how investors are to dispose of their holdings should the necessity arise.

Lever Brothers, Limited.—Authorised capital £130,000,000, of which £38,007,609 has been issued and fully paid. The prospectus states that "the present issue is being made to provide for capital expenditure incurred in connection with the business of the company and certain of its associated companies. The company, therefore, invites applications for..... 8 per cent. cumulative "A" preference shares of £1 each at par up to but not exceeding 4,000,000 shares." We referred to the Lever Brothers, Limited, in the *Economist* for June 19, 1920 (see page 1348), on which occasion applications were invited for a similar number of 8 per cent. preference shares. These 8 per cent. shares, amounting in all to £14,979,437, including the present issue, will rank immediately after £22,267,506 of 7 per cent. preference shares for repayment of capital and payment of dividends. Thus, while there are no debentures, the issue is reasonably well secured. We have previously called attention

to the top-heavy nature of the company's capitalisation. Most investors, however, will consider that the efficiency and activity of the company, coupled with the conspicuous abilities of its directors, will outweigh such objection.

Wiggins, Teape, and Co. (1919), Limited.—Authorised capital £1,500,000, of which £1,450,000 has been issued and fully paid. Issue of £350,000 8 per cent. first mortgage debentures at 98 per cent., redeemable at 102 per cent., on or before April 1, 1946, by annual drawings commencing in 1922. This is part of an authorised issue of £500,000. The company was formed in March, 1919, to acquire from Wiggins, Teape, and Co., Limited, paper makers, of Chorley, Lancashire, their business. Profits are shown from 1911. Assets are valued at £1,964,396, including the proceeds of this issue. These debentures are secured by a trust deed, and constitute a first charge on all land, buildings, fixed plant and machinery, and a floating charge on other assets of the company. We referred to this company in the *Economist* for March 22, 1919 (see page 484). The approximate annual amount required to redeem the present issue by 1946 and pay interest is £28,824. As profits were £82,070 in 1911, and rose to £214,178 in 1918, it will be seen that this amount can easily be found. These debentures are well secured both as regards capital and interest.

Vauxhall Motors.—Authorised capital £600,000, in ordinary shares of £1 each, all of which are issued and fully paid. Issue at par of £300,000 10 per cent. short term notes, repayable at 105 per cent. on October 1, 1925. Net assets, including net proceeds of present issue, are given as £1,260,455. This is after allowing for a bank overdraft of £138,949, for which the bank holds a debenture of £200,000 as collateral security. The company undertakes that so long as any notes are outstanding no other debentures will be issued. Although the motor trade is at present under a cloud, the excellence of the products of the company and the generous rate offered make the issue attractive to the speculative investor. But the small investor must remember the generally recognised assumption that high rates of interest carry with them proportionately high risks.

Charles Morgan and Co., Limited.—Authorised capita £300,000, in ordinary shares of £1 each, of which 110,000 shares have already been issued. This is an offer for sale of 190,000 shares at 21s 6d per share. The company was registered in August, 1919, for the purpose of acquiring the business of Messrs Charles Morgan and Co., established in the year 1760, since which date it has carried on in London a home and export trade as wholesale paper merchants and manufacturing stationers. The company also holds a controlling interest in Messrs Bennett and Wood, Limited, which was recently formed in connection with the manufacture of envelopes, formerly part of the business of Messrs Charles Morgan and Co. Net assets are valued at £327,310, including the proceeds of the present issue, but without including anything for goodwill. There are no debentures. Profits are shown from 1914, and are given, after provision has been made for excess profits duty and depreciation. The recent earnings of the company have been on a satisfactory scale, but we cannot find any justification in the prospectus for asking a premium.

South Suburban Gas Company, Limited.—Authorised stock £1,914,477, of which there has been created 5 per cent. ordinary stock for £1,087,795. The authorised loan capital is £957,239, of which £368,837 has been borrowed. This is an issue of £150,000 7 per cent. redeemable debenture stock at par. The company further supplements the definition of "redeemable" by stating definitely that these debentures are "to be redeemed at par on June 30, 1930." Interest on the existing debenture stock, and on the £150,000 now being raised, requires £28,941 per annum. Net revenue of the company amounted for the year ended December 31st last to £56,319. Various reserves amount to £91,258. On the whole, the offer is a reasonable proposition.

The Dartmoor China Clay Company, Limited. — Authorised capital £250,000, divided into shares of £1 each. This is an issue of 236,000 shares, of which 156,000 have been issued as part purchase-money, and 80,000 shares are now offered for subscription. The company has been formed to acquire the Dartmoor China Clay Company, Limited, which was incorporated in 1909, and provide for extensions, &c. The purchase price is fixed at £160,000, of which £4,000 is payable in cash. A valuation of assets is submitted, which shows that works are valued at £278,931. These are set out as follows:— China clay works at Wotter as improved by deep adit level with pipe-lines, and three new units of settling pits, kilns, clay stores, and sidings at Marsh Mills, and mineral freehold at Wotter, £331,200. Less cost of improvements, £69,075 = £262,125, + freehold houses, &c., £16,806—total, £278,931. This method of showing a valuation of the works when certain improvements shall have been made, and then deducting cost of improvements, estimated apparently by a person other than the one making the valuation, is rather curious. It would appear that either the vendor company is disposing of its property at a figure well under market value, or the valuation is on the optimistic side. The directors are somewhat reticent about the past financial history of the old company, which was formed in 1909. Has it ever made a profit? The prudent investor should require more information before he subscribes to this issue.

The "Bridge" Paper Mills, Limited. — Authorised capital £25,000, divided into 23,000 9 per cent. participating preference shares of £1 each and 40,000 ordinary shares of 1s each. This is an issue at par of 23,000 preference and £30,000 12 per cent. short-term profit-sharing bonds of £1 each. Bonds are repayable in 1926 at 10 per cent. premium. There are to be bonds for £40,000 in all. Bondholders have the right to exchange bonds at par for first mortgage debentures if and when directors decide to issue debentures. In addition to preference dividend of 9 per cent., preference shares are entitled to 25 per cent. of net profits after deducting the 12 per cent. dividend and providing for sinking fund on bonds. These bonds are also entitled to participate "in 25 per cent. of the aforesaid net profits." Ordinary shares are entitled to the remaining 50 per cent. of net profits. The company has been formed to take over a lease of the "Bridge" Paper Mill, Staffordshire, which has been established for about a century. It appears curious that although the undertaking has been existing for so long, no past profits are shown. Neither is there any information forthcoming as to the value of the lease, nor of the plant and stock, which is to be acquired at a valuation. The vendors are to receive £1,000 in deferred ordinary shares, which is one-half of the issue, and £500 per annum (rising to £1,000) for rent. The lessees, presumably the company, are to spend £20,000 in extending existing buildings and providing additional machinery. Preliminary expenses are estimated at £7,000, which amount on a company with a capital of £25,000 is remarkably high. A circular and prospectus-issuing company takes £4,500 for services rendered in connection with the promotion, exclusive of printing, advertising, brokerage, and legal expenses. The name of the company's bankers is not given. The vendors are the British and Colonial Property Investment Trust, Limited, which guarantee fixed dividends pending installation of additional plant. But unless we know more about the position of the vendor company we cannot appraise the value of its guarantee. We do not recommend this issue.

Alliance Glass Works, Limited. — Authorised capital £25,000, divided into 22,000 10 per cent. cumulative preference shares of £1 each, and 60,000 ordinary shares of 1s each. This is an issue of the balance of 14,012 preference shares and 14,004 ordinary shares at par. The company has been formed to manufacture bottles and other descriptions of glassware. We reviewed the outlook for this undertaking in the *Economist* for July 31, 1920 (see page 192). In July subscriptions were invited for 20,000 preference shares. As 14,012 preference shares are now offered, it would appear that that issue was not successful. After again perusing the prospectus, we can find no reason for recommending the present issue to the cautious investor.

Broken Hill.—The tribunal sitting in reference to the labour dispute is concluded. Alternative award has been given dependent upon the result of the technical commission upon incapacitation by disease and as to whether men so affected are withdrawn from service with compensation, which is recommended should be borne by Government and companies if carried into effect. Work underground, 44 hours, whistle to whistle, including 30 minutes crib; surface shift men, 44 hours; day men, 46 hours, both including crib time. Pending or failing above, 5 shifts of 7 hours, crib as above surface as above. Stoping night shift abolished. Wage of 15s minimum, against 13s as at present. Impossible to say what men will do after consideration of decision.

Broken Hill Proprietary Company, Limited.—The following cable has been received from the head office in Melbourne:—Report for four weeks ending Sept. 15, 1920—Coke, produced 22,510 tons; No. 1 blast furnace, produced 10,481 tons pig iron; No. 2 blast furnace, produced 13,095 tons; open hearth, produced 21,110 tons; blooming mill, produced 20,485 tons; rail mill, produced 9,369 tons; 18 in. mill, produced 8,885 tons; 12 in. mill, produced 2,157 tons; 8 in. mill, produced 928 tons; rod mill, produced 4,403 tons.

Burma Corporation.—Cable:—"Bawdwin Mines: No. 1 level, east crosscut 653 ft, north, from 5 to 20 ft, north side, 2 ozs silver, 2 per cent. lead, 2 per cent. zinc; from 5 ft to 20 ft, south side, 2 ozs silver, 2 per cent. lead, 2 per cent. zinc. No. 4 level, south drive, 147 ft east, from 315 to 330 ft, 1 oz silver, lead nil, 2 per cent. zinc. No. 5 level, south branch drive, 233 ft east, from 45 to 50 ft, 1 oz silver, lead nil, 1 per cent. zinc; rise 1,702 ft south, from 90 to 105 ft chute, 47 ozs silver, 42 per cent. lead, 26 per cent. zinc; from 90 to 105 ft manway, 23 ozs silver, 22 per cent. lead, 38 per cent. zinc."

Mount Lyell Mining and Railway.—Cable:—"From August 26th to September 22nd, inclusive, 13,076 tons of ore treated, being 8,123 tons from Mount Lyell and 3,668 tons from North Mount Lyell mine; also 1,285 tons concentrates. Converters produced 405 tons of blister copper, containing 401 tons copper, 12,698 ozs silver and 386 ozs gold. Furnace in blast 672 hours."

Mount Morgan.—Cable:—"For four weeks ended September 19th treated 9,370 tons Mount Morgan ore, 1,071 tons Many Peaks ore, 5,329 tons concentrates and 9 tons of purchased ore and secondary products. Produced 555 tons blister copper, containing 547 tons copper and 9,019 ozs gold, including 16 tons copper and 8 ozs gold from Many Peaks, also 2 tons of copper and 3 ozs gold from purchased ore and secondary products. Concentrator treated 16,981 tons ore for a production of 6,432 tons of concentrates, containing 313 tons copper and 4,225 ozs gold. In addition, have matte on hand containing 22 tons copper and 275 ozs gold."

(a) Increased capital.

Banco de Chile proposes to distribute dividends of $8 per share on the 600,000 old shares, and $8 per share on the 338,509 new shares, totally paid up; also $4 per share on 53,149 new shares, with only one quota paid.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, *3 Arundel street, Strand, London, W.C. 2.*

COMPANY MEETINGS, &c.

CHARTERED BANK OF INDIA, AUSTRALIA, AND CHINA.

INCREASE OF CAPITAL APPROVED.

SATISFACTORY YEAR'S BUSINESS.

THE BANK'S PROSPECTS.

An extraordinary general meeting of the Chartered Bank of India, Australia, and China was held, on the 6th inst., at 38 Bishopsgate, London, for the purpose of considering resolutions subdividing the shares, and increasing the capital of the bank. Sir Montagu Cornish Turner (chairman of the bank) presided.

The chief manager (Mr W. E. Preston) having read the notice convening the meeting,

The Chairman said: Ladies and gentlemen, our circular letter of September 16th last will have explained the object of our meeting here to-day, and, as regards the first resolution, few words on my part are required, I am sure, to recommend its acceptance by the shareholders. For some time past we have appreciated the fact that the denomination of our shares, £20 each, plus the premium attached thereto, made the share a rather heavy security to deal with in the market, and it has been somewhat difficult for the smaller class of investor to take up a share which, perhaps, commands a value of from £70 to £80 in the market—or even £90, as it did at one time—so that many desirable people whom we would welcome as constituents of this bank are unable to enjoy the privilege of being shareholders in the Chartered Bank. Therefore, it is with pleasure that I shall presently propose the resolution that the £20 share be subdivided into four shares of £5 each. Then, as regards the second resolution, our letter states that, in order to meet the increased demands of trade and the greater volume of business that the bank is now called upon to finance, the court of directors consider it desirable to put before the shareholders proposals for the increase of the bank's capital. In my remarks at our extraordinary general meeting in September, 1918, I gave particulars as to the gradual increase of the capital and reserves of this bank. I need not refer to these figures to-day, but I will give you some figures which are of considerable interest. They show the growth of the business during the past two years, and also the necessity for our coming to you to-day with proposals for an increase of capital.

CURRENT ACCOUNTS AND DEPOSITS.

Taking first the figures with regard to current accounts and fixed deposits, on December 31, 1918, when we made our last issue, they stood at £33,777,000. On December 31, 1919, they stood at £48,000,000—an increase of 42 per cent. On June 30th of this year they totalled nearly £54,000,000; that is an increase of 59 per cent. over the figures of 1918. Bills of exchange at December, 1918, totalled £22,244,000; in December, 1919, they were £26,500,000, an increase of 19 per cent. On June 30, 1920, they amounted to approximately £28,000,000, an increase of 25 per cent. over the figure of 1918. Bills discounted and loans in December, 1918, were £12,600,000, and 12 months after that date they were £17,500,000, an increase of 40 per cent. In June of this year they were £26,400,000, an increase of 109 per cent. over the figures for 1918. Bills of exchange re-discounted at December, 1918, amounted to £4,000,000, in round figures, and in December, 1919, to £16,000,000, an increase of 306 per cent. In June, 1920, they stood at just about the same figure. Forward contracts outstanding we can only give up to December 31st last, because the year has not expired yet. At December, 1918, they were £18,300,000, and on December 31, 1919, they were £48,500,000, an increase of 164 per cent. The total figures shown in our balance-sheet—the total assets and liabilities—were £47,600,000 in December, 1918, and £68,700,000 in December, 1919, an increase of 44 per cent. In June, 1920, they were approximately £75,600,000, an increase of 59 per cent. over the figure in 1918, when we made our last issue of shares.

INCREASE IN PROFITS.

Ladies and Gentlemen,—I think no further words are necessary on my part to show that we are fully justified in coming to you to recommend an increase of our capital. Our profits have also increased quite satisfactorily. In 1914 our net profits were £372,000. Then came, in 1916, that terrible tax, the Excess Profits Duty; but in spite of that we showed an advance on 1914, the amount being £381,250. In 1917 the net profits were £402,500; in 1918, £409,000; and in 1919, £447,347, after payment of Excess Profits Duty. I think, therefore, you will agree with me that, along with our increase of business, we are able to show an increase of profit, and for this year I do not anticipate a falling off from the profits shown last year. We have had a satisfactory half-year, and I hope we shall not have a very unsatisfactory six months ending December 31, 1920.

TERMS OF NEW ISSUE.

As regards the terms of issue, I am sure the shareholders will appreciate the fact that they will now get one new share for every two old ones, as against two for every three on a previous occasion, and that the premium on the £5 shares is only £2 10s. Had we made the issue on previous lines the premium would have been £5 per share; in other words, shareholders would have had to pay £10 for their share instead of £7 10s. We did this with the purpose of giving our shareholders a good turn. We think they deserve it, and we are able to make it. I was rather pleased at having a letter from one of our shareholders saying that he was astonished at our liberality, and asking whether we could afford it. Well, gentlemen, we are just able to afford it. Then it was thought desirable that full payment of the new shares should be made by December 31st of this year, because by so doing they will rank for full dividend *pari passu* with the old shares as from January 1, 1921. There, again, you have an advantage which you did not have before, and which I hope you will appreciate.

THE RESERVE—TREATMENT OF STAFF.

With the issue of these shares, if the resolutions are confirmed, the capital of the bank will in future stand at £3,000,000, and the reserve at £3,500,000. We shall have to build up our reserve again, and I hope we shall do so in the course of time. I should like to point out, however, that if we had made the premium £5 instead of £2 10s, we would have had a reserve of £4,000,000 instead of £3,500,000. There again we considered our shareholders. We must not forget that the large increase in our business, which is evidenced by the figures I have read to you to-day, has entailed considerably more work, far greater responsibility and devotion to duty on the part of our staff. It is only right and fair that their efforts should be suitably rewarded, and the directors have not overlooked this consideration. I mention that because another shareholder wrote a letter in which there was a slight insinuation that we were considering the staff more than the shareholders. Well, it was very ungrateful, because I can assure you that is not the case; we considered both alike. We should be absolutely failing in our duty, however, if we did not try to meet the fair and just demands of our staff, considering the increased cost of living, which is terrible in some parts of the East, the difficulty of housing, and the discomforts of living in a tropical climate.

DIVIDEND PROSPECTS.

Another shareholder has just written to me saying that he regretted he could not be present to support the resolutions to be submitted to-day, but he would be glad to have an assurance from me that we shall be able to maintain the present level of our dividends. I should like to ask that gentleman if he can assure me what trade is going to do in the next 12 months, what is going to happen in the East and in the West, what is going to happen in the case of the remarkable coin the rupee, and various other little considerations. We cannot tell, but we do hope that we shall not disappoint the expectations of our shareholders. We do assure them that every effort will be made on our part to maintain that fair return on the shares of this bank. We would not recommend at any time to give them what I call an outrageously big dividend, but we do try to give them a fair and just return on their investments in this bank. As regards the present position of trade, undoubtedly we are in for a dull time. We are in, perhaps, for a period of anxiety and difficulty, but with calmness and moderation on the part of the directors of the bank, and with fair treatment of our customers, who have always stuck so loyally to us in the past, I think we can assure you that there will be no great catastrophe as regards the business of the Chartered Bank, and I am fully convinced that once this cloud of unrest in the labour world, once this period of unrest due to militarism, has passed away, we can be pretty well assured that trade in the East and in the West will not be much worse in the years to come than it has been in the past. We must not give way to pessimism or to despair—our trade and our commerce were not built up on those lines—but we must go on with courage, firmness, and conviction that all will be well when once the clouds roll by. Now, ladies and gentlemen, I have talked enough, and I beg to propose the first resolution:—"That the present capital of the bank—viz., 100,000 shares of £20 each, be sub-divided into 400,000 shares of £5 each."

The Right Hon. Lord George Hamilton, G.C.S.I.: Ladies and gentlemen, I have great pleasure in seconding that proposition.

Mr Henley: I believe that in the original deed of settlement of this bank, and for some years, the minimum subscription of a shareholder was five shares. Is that the case now, and how will it affect the fresh arrangement?

The Chairman: So far as we know it will still be five shares. There is no reason to anticipate that any change will be made. I

must also tell you that until recently under the terms of our articles of association we could not have issued the new shares of £5 each; that is to say, without having two classes of shares. There would have been one class of £20 and one of £5, but we have had the consent of the Treasury to make all the shares of one denomination. I do not think you need anticipate any trouble on that score.

The resolution was then put to the meeting and carried unanimously.

The Chairman next moved:—"That the capital of the bank be increased to 600,000 shares by the issue of 200,000 new shares of £5 each, and that such shares be offered to the existing shareholders in the proportion of one new share for every two shares already held at a premium of £2 10s per share, payment to be made as follows:—£5 on or before November 15, 1920, £2 10s on or before December 31, 1920. Interest on these instalments will be paid at the rate of 6 per cent. per annum free of income-tax from the date of payment until December 31, 1920, after which date the new shares will rank in all respects *pari passu* with the existing shares."

Mr Thomas Cuthbertson seconded the resolution, which was unanimously agreed to.

The Chairman announced that a confirmatory meeting would be held on the 27th inst., and the proceedings then terminated.

J. HEPWORTH AND SON, LIMITED.

SATISFACTORY RESULTS OF THE YEAR.

The twenty-ninth ordinary general meeting of J. Hepworth and Son, Limited, was held on Tuesday, October 5th, at the registered office of the company, Providence Works, Claypit lane, Leeds, Mr H. M. Hepworth (the chairman) presiding.

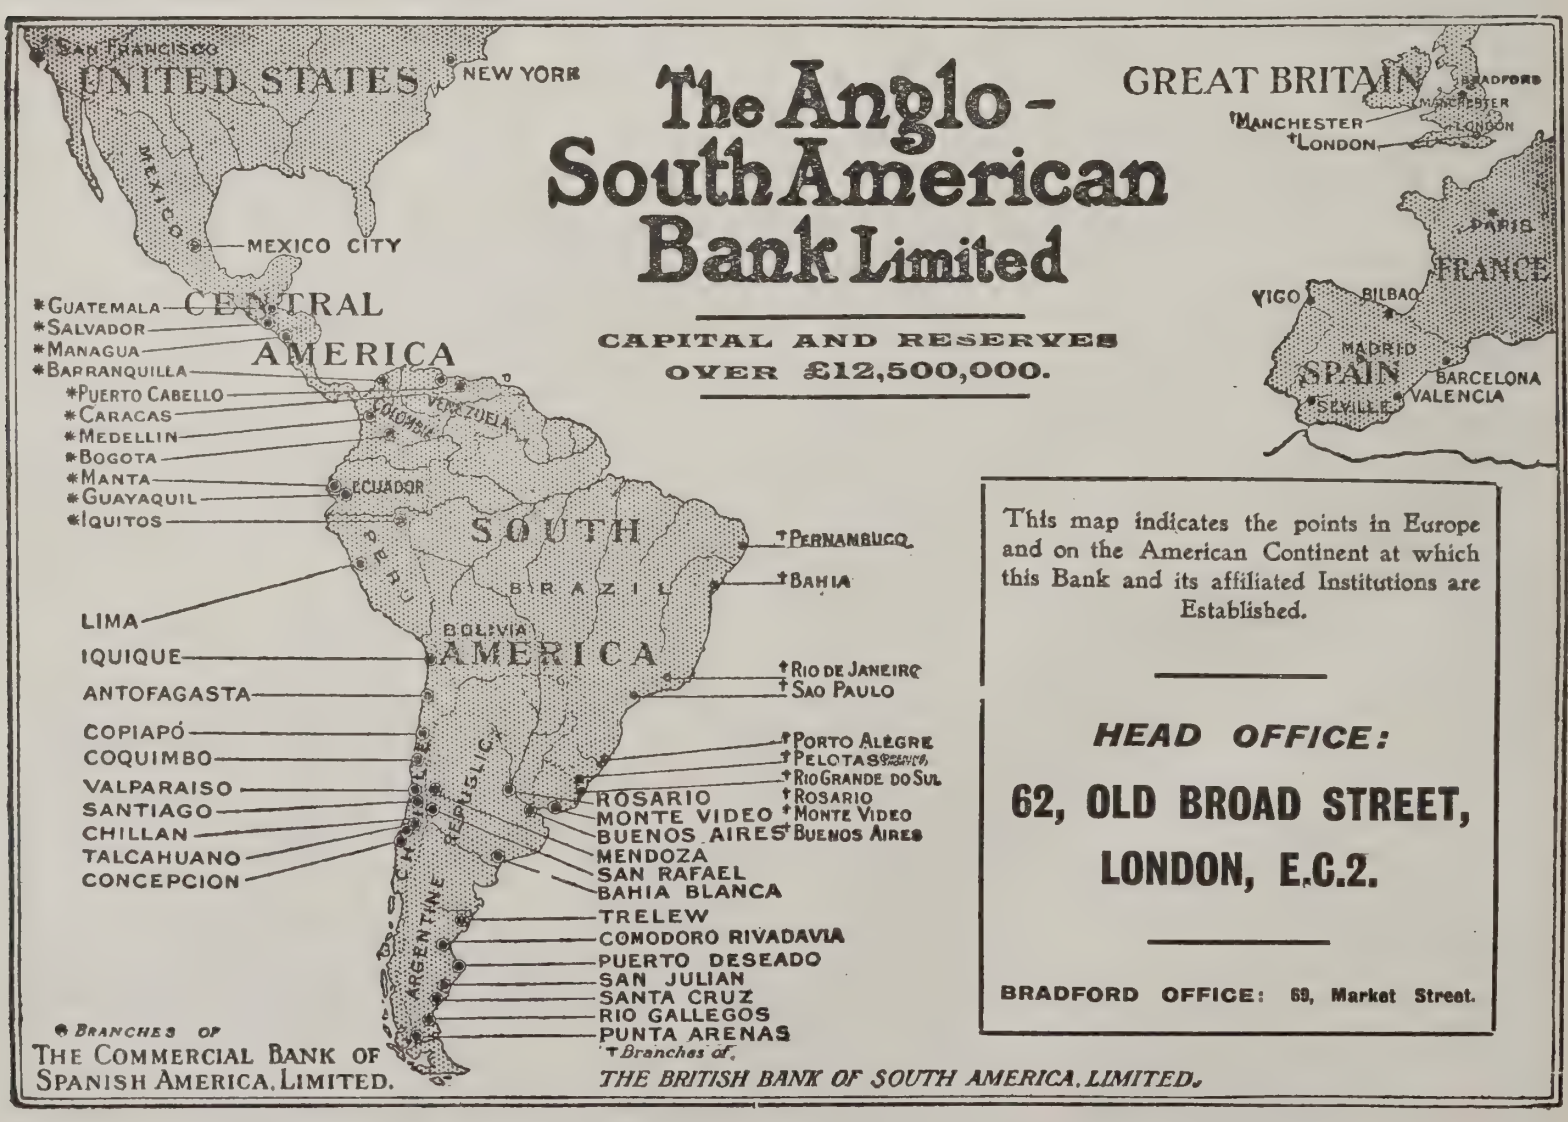
The notice calling the meeting having been read, the Chairman said:—Gentlemen,—You have the report and balance-sheet, with the auditors' report, before you, and will doubtless allow me to take them as read. It is a pleasure to my colleagues and myself to be able to place before you what I think you will regard as a very satisfactory statement of the affairs of the company. This is, of course, to a large extent due to the very large turnover done during the past year. It must not be overlooked, however, that we are reaping the benefit of much hard work done in reorganising every department of the business since 1911. Our stock is considerably higher than last year, which is due to more adequate stocking of the branches, and having a good reserve of cloth, &c., at the factory. It has, however, been all well bought, and forms to-day a good reserve, seeing that raw materials are higher than when the bulk of our stock was bought, and I can see no chance of any immediate fall.

THE YEAR'S PROFIT.

The profit for the year, after making all proper charges, and providing for depreciation, income-tax, excess profits duty, and directors' fees, is £72,082 0s 4d, which, after bringing forward the balance from the previous year, £9,908 3s 8d, and deducting the preference dividend, £6,000, leaves a balance available of £76,990 4s.

DIVIDEND, BONUS, AND RESERVE.

Coming now to dividends, where last year we paid 8 per cent. dividend, free of tax, on the ordinary shares, we have in the interval taken £104,000 from the reserve fund and allotted bonus shares to that extent in their due proportion to the ordinary shareholders. We now propose to pay you a dividend of 10 per cent., free of tax, on the increased capital, including the shares allotted as bonus. Further, we are placing the substantial sum of £25,000 to the reserve fund, and the sum of £5,000 goes to the benevolent fund. This latter fund has been of great value during the past year in helping urgent cases amongst our employees.



We carry forward £9,442 14s to the new year.

HEALTHY STATE OF THE BUSINESS.

With regard to business, in my opinion it never was in a more healthy state. Our factories, plant and machinery, and the fittings at our 173 retail branches, are all in an excellent state of efficiency. I need scarcely remind you that the cost to-day of erecting factories, with plant and machinery, added to the increased value of our 173 retail branches, would be infinitely greater than the figure at which they stand in our balance-sheet. The difference between the balance-sheet figures and to-day's value is a large additional reserve.

NEW CAPITAL—A SUBSTANTIAL BONUS.

I have also the pleasure of announcing that in addition to the dividend of 10 per cent., free of tax, which you will receive by post to-morrow, there will be an opportunity given to each shareholder, whether preference or ordinary, of acquiring new ordinary shares in the company at par in the proportion of one new for

every three held as on September 29th last. This, you will admit, is in the nature of a substantial bonus, and the offer is being made to preference and ordinary shareholders alike. The new capital is required to meet the increased demands for the expansion of our business.

CURRENT YEAR'S PROSPECTS.

In conclusion, I will only add that we have our shops in the best positions in most of the big towns and cities in England. Our works are modern and up to date; our branches are managed by keen salesmen, and I feel sure that this coming year will bring us a continuance of the great prosperity which we have so long enjoyed.

I beg to propose "That the report of the directors and the statement of accounts for the year ending July 31st be and are hereby received and adopted, and that a dividend of 10 per cent., free of income-tax, be declared on the ordinary shares."

The motion was carried unanimously.

Mr J. Gordon and Mr P. McC. Wilson were elected joint auditors of the company for the ensuing year.

JAVA PARA RUBBER ESTATES, LIMITED.

SATISFACTORY YEAR—GOOD FORWARD CONTRACTS.

The ninth annual general meeting of the Java Para Rubber Estates, Limited, was held, on the 4th inst., at the Rubber Growers' Association, Eastcheap, London, Mr R. J. Arnold (chairman of the company) presiding.

The Chairman, in moving the adoption of the report, said that the company had had quite a good year. They had harvested 739,000 lbs of rubber—against an estimate of 730,000 lbs—and 3,400 piculs of coffee. They estimated that the crops would eventually fetch about £98,000, after deducting £35,000 of produce on hand at the end of 1918. Almost the whole of the amount realised so far was from rubber. The coffee on hand was valued at about £20,000, and this had been very difficult of sale lately, as coffee recently had been having a bad time. This was attributable to the fact that the more important coffee drinking countries had been obliged to hold aloof on account of adverse exchanges. The profit shown for the year was £45,652, which was about 28 per cent. on their capital of £160,000. Unfortunately they were liable to excess profits duty, and it was therefore impossible for the company to distribute more than 20 per cent.; 5 per cent. of that was paid on October 16th last year and the balance of 15 per cent., which they now proposed to declare, made up the 20 per cent. The distribution of 15 per cent. would absorb £24,000, leaving £43,663 to be carried forward, out of which excess profits duty would have to be met.

Last year their rubber fetched a good price, averaging over 2s per lb. A few judicious forward contracts helped the price, and they still had to deliver 10 tons monthly until the end of 1920, ex-warehouse Java, at 2s 4½d which was equivalent to 2s 7d London, and a further eight tons monthly throughout 1921 at 2s 3½d Java, equivalent to 2s 6d London. For the moment they were passing through a bad patch, but he thought that the restrictions inaugurated by the Rubber Growers' Association would put matters right in the near future. They had opened but little on the Wonokoyo Estate last year—a mere trifle of 10 acres—but they had brought the Tjikasso Estate up to over 1,000 acres, at which point they would now mark time. The land which the company leased on Wonokoyo seven years ago, and which had to be handed back, fully planted, reverted to the company free of cost on December 31st this year. They had merely to pay the actual cost of the buildings erected thereon—which they also took over—and those buildings were necessary for harvesting the crops, so far mainly coffee. The estimate for 1920 was 895,000 lbs of rubber, but they were already restricting, and it might be that they would have further to restrict their output for the general good of the industry. The Estate was in good order, and, under normal conditions, could be expected to give yearly increasing crops for quite an indefinite period.

The report was unanimously adopted, and the dividend as recommended was declared.

MAPPIN AND WEBB, LIMITED.

CONSIDERABLE EXPANSION IN BUSINESS—CAPITAL INCREASED.

An extraordinary general meeting of Mappin and Webb, Limited, jewellers, goldsmiths, and silversmiths, was held on the 8th inst., at the Savoy Hotel, W.C., to consider a proposal to increase the capital of the company to £1,500,000. Mr Wm Harris, chairman of the company, presided.

Mr Frederick Waite, one of the joint secretaries, having read the notice,

The Chairman, in the course of moving the resolutions, said: As to the need for further capital, this is largely accounted for by the continued and abnormal expansion of our business. The sales for the year 1919 were exactly three times as large as they were for any one year since the formation of the company, and this year, up to September 30th, they are 30 per cent. higher than the sales for 1919. I will elaborate this point a little. In 1913 we acquired in Montreal a jeweller's business. We have extended that business considerably.

I told you at our last meeting that Mr. Herbert Mappin was absent in South America, visiting our branches. He returned with a glowing account of the importance and standing of our business in Buenos Ayres, Rio de Janeiro, and Sao Paulo. By the law of the Argentine Republic, a lease cannot be granted for more than ten years. We are therefore faced periodically with the fact that we might have to vacate our premises in Buenos Ayres. The only satisfactory solution, therefore, was to acquire our own premises, and this we have done. We are already in Florida, which is the best shopping street in Buenos Ayres, and our new premises will be in the same locality. It will be necessary for us to demolish the present building and erect a structure worthy of our productions. At Rio de Janeiro our premises have been found altogether too small for our growing business, and we are therefore negotiating for larger premises in the Avenida Central. In Paris we have extended and beautified our premises in the Rue de la Paix at great cost, and we entertain no doubt that we shall earn a substantial rate of interest on the money we have spent there. For some time our factory in Sheffield has been altogether inadequate to turn out the goods we require, and we have bought a plot of land in Sheffield upon which we are now erecting a modern factory about double the size of our present factory, with the most up-to-date appliances. I might mention many other instances where we have had to spend money, but those I have just related will, I hope, be sufficient to impress you with the fact that more money is urgently needed. We ask you to agree to our increasing the dividend on the preference shares from 5½ per cent. to 8 per cent. as from October 17th next. We paid an ordinary dividend last year of 15 per cent., and we have just declared an interim dividend on account of the current year at the rate of 12½ per cent. I do not like to prophesy—one never knows the trend of trade and events—but to the best of my knowledge and belief we shall be fully able to maintain the dividend paid you last year. You have a magnificent name, a name which stands everywhere for good workmanship and good faith. Our business is increasing, and every branch we have is profitable.

The resolutions were duly adopted.

LEACH'S ARGENTINE ESTATES, LIMITED.

SUGAR LEGISLATION IN THE ARGENTINE.

The eighth ordinary general meeting of Leach's Argentine Estates, Limited, was held, on the 8th inst., at Winchester House, Old Broad street, London, Baron F. A. d'Erlanger (vice-chairman of the company) presiding.

The secretary (Mr W. F. Yaxley) having read the notice convening the meeting, and the report of the auditors,

The Chairman, in the course of his speech, said: The profit on trading, after providing for income-tax and corporation profits tax, amounts to £268,792, compared with £325,126 for 1918-19. The reduction in profit is due mainly to a lower selling price of sugar consequent upon the country's total production of sugar being in excess of consumption, whereas last year the exact oppo-

site was the case. Owing to large importations of sugar during the previous season, there was a fair stock on hand at the commencement of 1919 crop, at which time prices were satisfactory to the manufacturer without being excessive for the consumer, especially when compared with prices ruling in other parts of the world. The crop promised to be a large one, and in excess of the normal consumption of 200,000 tons. It was confidently expected that the surplus would be allowed to be exported. As time went on, however, the Government made no move in this direction, and internal competition gradually brought down the price to a low level, and finally, after long negotiation, the Government decreed that exportation up to 100,000 tons would be allowed on condition that a quantity equal to one-third of the quantity exported should be placed at the disposal of the Government to be sold, should the occasion arise, at $4.10 per 10 kilos, which is equal to about £36 per ton. It is understood that export licences were granted for 101,000 tons in which your company was interested to the extent of a few thousand tons. Coming now to the situation as regards the current crop, I have to report events of a remarkable nature. Early in July very severe frosts were experienced all over Argentina, snow actually falling in our own district, while the canefields throughout the Argentine were seriously affected. It was considered that the total Argentine production as originally estimated would be reduced by at least one-third. The sugar situation was thus again completely altered; the price of sugar soared, and large quantities originally intended for export were realised locally at prices higher than those ruling for export. The Government at once stopped exportation, and early in August the Chamber of Deputies passed a Bill authorising the expropriation of 200,000 tons of sugar at the prices of $4.10 per 10 kilos for refined and $3.50 for granulated (our own quality). The Senate, which is the higher authority, did not receive the proposal favourably, and referred it back to the Chamber of Deputies, which has postponed consideration for the time being. The Argentine Parliament has now adjourned until May, and it is not certain whether a special session will be convened to discuss the project. The report and accounts were unanimously adopted.

† Rates lowered ½% on Jan. 2, 1918, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ½% on Nov. 6, 1919, and 1% to 5% on April 15, 1920. ‖ Lowered from 3½% to 3% on June 5, 1918, but was raised to 3½% on July 31, 1919, to 3¾% on Oct. 6, 1919, to 4½% on Nov. 6, 1919, and 5½% on April 15, 1920. * Changed from 4¾% to 4% on Dec. 27, 1917, and from 4% to 3½% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 15, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4½% to 5¼%, and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months' Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

Total value of imports of gold.....	1,683,841	Total declared value of exports registered in the week	3,373,155

Messrs Samuel Montagu and Co. write as follows on October 7th :—"Gold : The Bank of England gold reserve against its note issue is £121,669,055, an increase of £100,440 as compared with last week. A considerable amount of gold came into the market this week and was taken for America, India, and the Continent. It is reported from New York that gold to the value of $19,275,000 has been received in that city during the week from London. Silver : It has been rumoured that there have been sales of bar silver from India to China. The last-named country is now in the remarkable position of sustaining, like a modern Atlas, the silver market of the world—less the 45,000,000 ounces a year absorbable under the Pittman Act. It is important to notice that if the report be true, the markets have had two sources of supply besides production, namely, demonetised silver from the Continent, and an overflow from India, which might almost be described as demonetisation in that quarter. There is no doubt that it was the probability of the export of silver rupees becoming feasible as a result of the position of exchange that impelled the Bazaar price downward to about 106½ rupees the 100 tolas—that is to say, 2⅜ rupees per 100 tolas below the Indian intrinsic value of full weight rupees. Meanwhile, the ratio of the metallic reserve to the Indian note issue is on the increase; it is now 59.7 per cent., and the major part of the increase is in the form of silver. We remarked long since that the extremely large remittances of silver to China the last year or so were not only owing to the replacement of the silver shipments made during the war from that quarter to India for coinage, but also to the ill odour into which paper money had fallen as a consequence of the Russian débâcle. This distrust of notes still continues in the interior of Asia, and it may therefore be taken for granted that China is for awhile in a position to import and retain, or to consign into the interior, more silver than in the past—perhaps even 50,000,000 or 60,000,000 ounces per annum. This accounts for the ease with which China has continued to take the metal. It is stated that the imports of silver into China have amounted to nearly 52,000,000 ounces between the beginning of January and the end of August this year. Another factor in favour of silver is a certain amount of coinage taking place in Mexico—said to be much more substantial than the 3,000,000 ounces thus dealt with in 1919. The power of Mexico to absorb silver for this purpose is governed largely by the number and wealth of the population. On these grounds, only a fractional proportion of Mexico's important and probably increasing production is likely to be minted. The downward movement of prices during the week has been pronounced. The price for cash to-day is the lowest since July 29th last, and that for two months' delivery since July 27th last. An impression exists in certain quarters that the price of silver governs the exchange value of the rupee to the extent that if the price of silver fell to its old pre-war level—round about 26d the ounce—the exchange value necessarily must follow suit. This erroneous idea arises from various causes. The exchange value of the rupee certainly was raised owing to the recent abnormal increase in the price of silver. It was obviously impossible for the Indian Mint to coin profitably rupees for 16d (15 to the pound sterling) when the price of silver exceeded 43.05d the ounce. Owing to the keen demand for currency, silver rupees had to be coined, and the exchange value of the rupee had therefore to advance so as to exceed that of the price of silver. But this fact does not indicate that the reverse must take place. There is no obligation for the Government of India to keep down the exchange value of the rupee close to its intrinsic value. The right course for a Government is to fix the exchange value of a token coin at such a figure that the risk of melting it profitably is small. Hence, when the vagaries of the silver market revealed the danger of a ratio of 15 rupees to a pound sterling, the Government decided to reduce the ratio, and fixed a legal tender value of 10 rupees to the pound, which, in view of after events, some consider to have been too radical a change.

RAILWAY AND TRAMWAY TRAFFIC RETURNS.

No traffic returns of British Railways have been issued since the Government took control of the Railways at the outbreak of the War.
The Government took over control of the Irish Railways as from January 1st, 1917.

NOTICES.

The Union Bank of Australia, Limited, notify that a branch of the bank was opened on September 30, 1920, at Kaikohe, New Zealand.

Barclays Bank, Limited, announce that they will open on Monday, October 11th, a sub-branch at 2 Market street, Newport (Pem.), under the supervision of Mr T. O. Jenkins (manager of Fishguard branch).

The Standard Bank of South Africa, Limited, announce the opening of an agency at Port Allan, near Theunissen, in the Orange Free State.

The Bank of British West Africa, Limited, announce the opening, on October 1st, of a branch at Cairo, Egypt.

Reports and Notices.

Mr F. G. Harvey, until recently general manager of Pataling Rubber Estates, has joined the board of the Amherst Estates (Selangor) Rubber Company, Limited.

We are informed that Mr J. Percy Clarke, C.B.E., M.Inst. C.E., has been elected to the board of the Liebig's Extract of Meat Company, Limited, to fill the vacancy occasioned by the death of the late Mr Maurice Glyn.

Messrs Price, Waterhouse and W. B. Peat announce that their business in South America and that of Messrs Touche, Faller, and Co. have been amalgamated, and the combined businesses will be carried on under the style of Price, Waterhouse, Faller, and Co., with head office at 376 Bartolomé Mitre, Buenos Ayres, and branches at Monte Video, Rosario, Rio de Janeiro, Sao Paulo, and Valparaiso.

It is hoped that in the event of liquidation of Knight's Deep, Limited, there may be a distribution of 8s to 10s per share; but this estimate is dependent on various factors, as to which no reliable information is as yet available.

Henry Head and Co., Limited, have moved to 110 Bishopsgate.

The directors of the Clerical, Medical, and General Life Assurance Society have appointed Mr Bernard Smither to be assistant secretary.

Mr James Bowker and Major C. Brooman White, C.B.E. have been appointed directors of Messrs B. Morris and Sons, Limited.

ASSURANCE.

GENERAL REINSURANCE COMPANY, LIMITED.—The directors have postponed payment of the calls until March 15th and June 15th next respectively. It is proposed to close the company's financial year on December 31st next, and to issue the directors' report and accounts as soon as possible in the new year.

MISCELLANEOUS.

MANCHESTER LINERS.—The report for the year ended June 30, 1920, states that the regular service to and from New Orleans operated by the company prior to the war has been resumed. The required amount of first mortgage and "A" debentures have been purchased for redemption, leaving the amounts outstanding at June 30th: First debentures £11,200, "A" debentures £44,800. After providing depreciation and all charges (including debenture interest, preference share dividend, excess profits duty, corporation tax, and income-tax), and including £13,911 brought forward, the amount of profit available is £181,096. The directors propose to place £100,000 to reserve, to pay a dividend of 15 per cent., free of tax, on the ordinary share capital, leaving a balance of £14,316 to carry forward.

ELDER, SMITH, AND CO.—The report for the year ended June 30, 1920, states that the net income for the year amounts to £143,975, which with the undivided balance from last year, £130,931, makes £274,906, less dividend for 1919, £72,000, leaving £202,906. The directors have declared a dividend for the past year at the rate of 10 per cent. per annum, also a bonus of 2½ per cent. on the paid-up capital; £25,000 has been transferred to reserve fund, and £10,000 added to the provident and guarantee fund, leaving a balance of £167,906.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions during the week have been more favourable for outdoor farm work, and farmers are busily engaged with threshings and also preparing the land for the new crop. In the North of England and Scotland, however, the completion of harvest operations is retarded by recent wet weather, and good winds would be welcome to dry out the soaked sheaves. Samples shown at the chief distributing centres are of satisfactory quality, while supplies come forward freely, and all milling grades are readily taken up at the maximum rate of 95s per qr or 96s per 504 lbs delivered. Liberal quantities of imported were available, so that the mills are well supplied with grist, while no change in official prices has yet been announced. The demand for flour shows slight improvement, as bakers have apparently used up a large part of stock purchased at the lower prices, while the improvement in quality of G.R. grade will tend to stimulate the demand. Prices remain at 86s per sack ex mill. An average quantity of imported was released, but the quality was rather better than of late, and values rule at 86s 6d to 88s 3d per 280 lbs, ex store. From 18th inst. imported descriptions will be graded at various prices, according to quality, ranging from Class A, comprising Manitoba, spring and hard winter straights at 93s down to class E, including Chinese Durum, and soft winter at 81s 9d per sack. Barley firm for English malting, with improved inquiries, and prices range from 83s to 115s, as to quality. Grinding sorts quiet at 75s to 84s per 448 lbs. Imported descriptions dull, and in buyers' favour. No. 4 Canada Western landed quoted 71s, ditto ex ship 70s, Canada feed 70s, American feed 69s, both landed. Plate ex ship 70s, and ditto landed 72s. C.i.f. trade quiet and values weaker. No. 4 Canada Western, October-November, sold 60s 6d. Maize dull and easier owing to free forward offers of American old crop and pressure to sell Plate descriptions. New Plate ex ship quoted 68s 6d, and ditto landed 72s. On c.i.f. terms cargoes of Plate were depressed and lower, a steamer on passage changing hands at 63s 3d per 480 lbs. Parcels in fair request, but prices irregular, but materially lower on the week. Plate, September-October, sold 65s to 61s 9d, October-November 64s to 60s 9d per 480 lbs. Oats steady for native sorts, but imported dull and weaker. New English whites quoted 63s to 68s, grey winter 56s to 58s, blacks 56s to 60s per 336 lbs. Of imported, Canadian quoted 63s, and Plate 50s 6d to 51s landed per 320 lbs. Forward business slack and prices lower. Plate f.a.q., October-November, sold 48s 6d to 46s, and No. 2 Canada Western in similar position 51s 6d to 50s 3d per 320 lbs. English beans quietly steady. English springs 100s to 105s, new winter 80s to 82s 6d per 532 lbs. Peas in fair request and fully maintained. English maples 105s-115s, small blues 100s to 103s per 504 lbs, and Japanese marrowfats 32s to 32s 6d per cwt. Oatmeal quietly steady at late rates. Grain chartering from the North American Atlantic seaboard was rather more active, and rates firm at 12s to 12s 6d per quarter U.K., 14s Antwerp/Rotterdam, 17s paid Algiers or Oran, and 18s quoted West Italy, with 1s per quarter extra in each case if loading in the Gulf. The River Plate section was quite featureless in the absence of orders, and rates nominally easier at 85s prompt up-river loading, and 80s per ton November to U.K./Continent for maize. India firm, with Bombay fixed at 85s one, and 90s two discharging ports, while Australia was named at 135s to 140s for new season's wheat, January-April loading to U.K./Continent. Further tonnage has been taken from the Danube up to 70s to U.K./Antwerp/Rotterdam. Maize Beira to U.K. quotes 85s to 90s per ton.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1920-21, contrasted with 1919-20, 1918-19, and 1917-18.—(Particulars of imports of wheat and flour temporarily discontinued):—

	1920-1921.	1919-1920.	1918-1919.	1917-1918.

THE IRON AND COAL TRADES.

Our Glasgow correspondent (writing on Thursday) says:—Owing to the uncertainty that still surrounds the future of the situation in the coal trade only a moderate business has been transacted this week. A good normal trade is passing in Scotch irons, which are about 10s a ton down from top, at £13 10s for No. 3 and £14 for No. 1, the export rate all round standing at £16, or 10s less than the highest touched this season. Scotch hematites are scarcer than desirable, and the price keeps firm at £14 5s a ton. Heavy steel scrap is called £10 5s a ton; borings £7 12s 6d to £7 15s, f.o.t., at consumers' works. The most significant change in values is that intimated by black sheet makers, who in response to lower charges in semi-refined materials have intimated reductions running from £2 to £7 a ton on the terms that have ruled since May. The new list makes sheets above $\frac{7}{16}$ inch, £36; $\frac{3}{16}$ inch to ⅛ inch, £36 10s; ⅛ to 12 gauge, £36 15s; under 12 to 16, £37; under 16 to 20, £37 5s; under 20 to 24, £37 10s; under 24 to 27, £38 10s. A fair inquiry rules for heavy sheets, and producers have well-filled books to go on with; but generally for forward work they are well disposed to meet buyers. In shipbuilding and boilermaking connections consumers keep exceedingly busy, so busy indeed that steelmakers are unable to fully cope with requirements. During the recent boom as much as £36 a ton was paid on export order for a line of sections; to-day it could be repeated at near £28 a ton. Machinery builders, locomotive engineers, tubemakers, bar iron and steel makers, &c., have plenty of work on hand and to look forward to. Though the miners are not working regularly, supplies of coal are good, and in the last few days some cargoes of smalls have been liberated for shipment to the Continent.

Our Sheffield correspondent writes:—Local trade conditions have this week taken a decided turn for the worse, and the announcement that a large steel works is to be closed down immediately, involving the dismissal of 1,000 men, has created a general feeling of apprehension for the future. Predictions that many more workers will have to be discharged before the end of the year are heard on every hand. An interesting item of news is the receipt from Japan of inquiries respecting supplies of armour plate and other military and naval equipment. Another instance of the falling tendency of prices is reported this week, makers of acid steel billets having reduced their quotations by £1 per ton. The depression of trade, which first attacked the tool steel department, is spreading to other branches, and the city is suffering from the suspension of buying from the automobile industry, which has been a big customer for a wide variety of steel and tools. The amount of work on makers' books, which was heavy a few months ago, has been depleted by many cancellations. For the first time for four years steelmakers are seeking for orders. Until recently business was literally thrown at them in far greater volume than their capacity to deal with it. Business with France and Italy is absolutely stagnant. A few foreign and colonial markets are taking good quantities of steel material, and certain branches of finished goods continue busy. The rolling mills are full of work. The country's output of basic steel is now excessive, and Belgian competition is becoming a factor of increasing importance. Holders of scrap material cannot sell anything except at absurdly low prices in relation to the value of new material. The iron market has lost little, if any, ground, as the make of pig-iron continues below the requirements of the manufacturing trades. The strike danger has now revived again, and with it a desire on the part of the public to buy for prompt delivery. Works are getting sufficient supplies for current use, as this shows a declining tendency. There is not much to spare, however, for stocking. The demand for house coal is very active. Current prices per ton at pits are:—Best South Yorkshire hards, 33s 2d to 33s 8d; ditto Derbyshire, 32s 8d to 33s 2d; best Tyne steam (export), 150s to 160s; steam nuts and cobbles, 31s 2d to 32s 2d; best hard slacks, 28s 5d to 28s 11d; small slacks, 23s 2d to 24s 2d; branch, 37s 2d to 37s 8d; best Silkstone, 33s 8d to 34s 8d.

Our Middlesbro' correspondent's report, dated October 7th, is as follows:—Pig-iron: Foundry iron is still as scarce as ever, but the forge grades are rather more plentiful. If a coal settlement on the basis of increased output is arranged, then there would be a chance of an increased output of pig-iron. Prices are unchanged at 225s for Cleveland No. 3 and No. 4 foundry, and 260s for mixed numbers East Coast hematite, all for home consumption. Manufactured iron and steel: Fuel shortage is interfering very much with our rolling mills. Steel ship-plates (home), £24 10s; steel ship angles, £24; iron ship angles, £30 15s; iron bars, £30; steel rails, £25 net. Iron ore: Sellers quote 50s for best Bilbao Rubio for the first half of next year, but business is difficult in view of the coal crisis.

VICTORY BONDS
purchased now will not be available for the payment of Death Duties for their full face value until six months have elapsed. The
VICTORY BOND POLICIES
issued by the
NATIONAL PROVIDENT INSTITUTION
provide for the payment of the full amount of the face value of the bond from the date of issue.
Particulars post free on application to—
48 GRACECHURCH STREET, LONDON, E.C.3.
Telephone: 1773 Avenue.

MANCHESTER, October 7.

It is not possible to record any increased activity in the market during the week. Although a fair amount of inquiry has been about, buyers have been slow to operate, and there remains considerable nervousness as to the future course of prices. Cloth shippers are receiving substantial deliveries of goods bought several months ago at much higher prices than those ruling to-day, and there are fears of difficulties in effecting clearances in outlets abroad. India merchants have been discouraged by the fall in the value of the rupee, and most of the offers met with have been altogether too low. The drop in silver has adversely affected trade with China. For several markets stock lots of miscellaneous goods have been picked up at cheap rates, but there has not been any general flow of orders. Production in all weaving towns continues to be curtailed. Spinners of yarn have reported a poor demand, and it is anticipated that no difficulty will be met with in securing the necessary support to the organised short time movement. Prices have been easier and very irregular in both American and Egyptian counts.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says :—There is no improvement in trade, and throughout the wool textile industry the lack of new orders is causing serious concern. Up to the present the wool sales at Adelaide and Sydney have had no effect on the home trade, but some topmakers are quoting what appear to be very cheap prices for tops for delivery in the early part of next year. For spot delivery average 64's tops are nominally quoted at about 6s per lb, but some firms are offering them as low as 5s. Financial pressure is evidently causing many holders of stock to realise almost regardless of price, and it is a fact that at to-day's prices fine tops cannot be made out of wool bought in London without showing a loss. Some spinners are still well engaged on old contracts, but most firms are now looking for new orders, and have great difficulty in finding enough new business to keep their machinery running. As a matter of fact, the list of firms on short time is steadily increasing, and in some sections of the trade there is already a considerable amount of unemployment. There is practically nothing doing in the piece goods trade, and stocks in manufacturers' and merchants' hands are unduly heavy.

COLONAL WOOL.

(FROM A CORRESPONDENT.)

The event of the week is the reopening of the sales in Australia, the first auctions since 1915 having been held at Adelaide and Sydney. Practically every selling centre will hold a public auction this month, and a new one will be opened at Fremantle. The results cabled from Adelaide by Messrs Elder, Smith, and Co., Limited, the New Zealand Loan and Mercantile Agency Company, and Messrs Dalgety and Co., Limited, were just about what was expected. Many of the clips sold a week ago in Adelaide are well-known to the trade, and the fact that the prices realised are anywhere from 10 to 75 per cent. above appraisement values a year ago is significant. I expect that the sellers would dispose of every bale they could at even appraisement values, and think this should be done wherever possible. Of course, sellers know full well that there will be no surplus wools of good warp length, and this accounts for comparatively good prices being realised for this class of raw material. If the trade saw the least chance of a revival in industry, there would soon be a big demand for wool, but there is really nothing to inspire operations, and the big firms with machinery are to-day very indifferent about increasing their stocks. However, the clean scoured basis is useful information, Messrs Dalgety and Co., Limited, stating that the average clean cost was 52d to 54d per lb, some lots higher. The average clean cost of super warp 60's to 64's was 50d to 52d, which I take to be the price ex warehouse, some cables stating that good combing wools will cost 56d to-day landed Bradford. This means that good warp 64's tops will cost around 6s 3d, but no doubt many good topmaking wools were secured on a basis of 5s 6d to 6s.

The news to hand from Sydney more or less harmonises with what took place at Adelaide, though it is more scrappy. We are told that a healthy tone prevailed, and that super merino fleece wools realised 35 to 50 per cent. over the previous season's appraisement prices, good merinos appreciated 20 to 25 per cent., and ordinary wools 10 per cent. Private cables received say frankly that wool can be bought to bring in 64's tops landed Bradford at 5s 6d to 6s, and with many topmakers having sold forward at as low as 5s, the impression prevails that the home trade will stand out of the market until they can obtain the wools at a profitable basis. I certainly should have liked to see the sales in Australia open in a strong and vigorous way, for the entire textile world is to-day in a languishing state, and more or less unnerved by the weight of wool available. There is growing concern in manufacturing circles respecting the future, the quantity of standing machinery increases as weeks go by, and the outlook for trade could hardly be worse. In spite of known large Continental needs, business is being held up by the fact that financial facilities are restricted, and the inability of prospective customers to buy on the present basis of prices.

AUSTRALIAN WOOL SALES.

Messrs Dalgety and Co. received the following cable from their Adelaide branch on October 1st :—"Wool sales opened. Attendance of buyers is large; 20,000 bales offered, about 6,000 sold.

The First National Bank of Boston

Transacts commercial banking business of every nature

Correspondence Solicited

Capital, Surplus and Profits
$37,500,000

Super fine greasy wool 25 to 50 per cent. above appraisement price; average clean cost 52d to 54d per lb, some higher. Super warp wools 60's/64's average clean cost 50d to 52d. Topmaking wools withdrawn. Best bellies are realising appraisement prices, necks and greasy merino pieces free 10 to 20 per cent. higher, others unsaleable. Local and American buyers are the principal operators. Bradford are hardly buying anything. Burry and seedy greasy wools neglected. Best price Neds Corner 3s 3½d."

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

Values of linseed have shown a marked downward tendency, and while spot is lower by 20s on the week, old Plate crop for shipment has declined 45s to 50s. Plate shippers are exhibiting more anxiety to do business and to dispose of the surplus which remains before the new seed comes into sight. From January 1st to September 30th the shipments from Argentine ports amounted to 801,000 tons, or approximately four-fifths of the estimated production. Allowing for seeding and sales forward, there cannot now remain a very considerable quantity unsold. Of the export, 497,000 tons have been shipped to North America, 140,200 tons to the United Kingdom, and 155,000 tons to the Continent. Moreover, there would seem to be plenty of linseed available to meet all requirements, the world's crop for the season 1919-20 being roughly estimated at 2,150,000 tons, which compares with 1,450,000 tons in the preceding period. Only indifferent transport has militated against better distribution.

With better supplies of linseed to hand and near, the oil product is offering more freely, and prices have declined £4 per ton from last week's highest, without, however, attracting buyers to any extent. The unsettled industrial outlook is having rather a depressing effect upon the market, large consumers being altogether indisposed in the circumstances, to lay in stocks or in any way anticipate a problematic revival of the paint, varnish, and other consuming trades.

Cottonseed has been easier, and caused a good trade in Egyptian at the decline, since when there has been a steadier tone. A moderate business has been done chiefly in crude and refined edible. Values are slightly easier for crude, but unchanged for refined. Soya beans are more freely offered, and some transactions have resulted; trade in oil is principally in deodorised.

The demand for oil cakes has fallen off, and trade is very slow, prices being maintained with difficulty. The reduced herds of cattle is no doubt responsible for less consumption, and Hull crushers are agitating for a removal of the embargo on Irish cattle in order to enable farmers to return to feeding stock for market on a pre-war scale.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Hides were rather irregular at last Thursday's London auction, although the tone of ox and cows was decidedly weaker. Nearly all the best grades dropped ⅛d, but seconds advanced ⅜d-½d. Cows fell ⅛d-1⅛d, but kips advanced ⅛d-⅞d. Calf were all firmer, and advances of ⅛d-1⅜d were made. Lambs were 12d-15d down, and pelts 2d-6d up. There is little trading doing in foreign hides, tanners being still out of the market. Cables from the United States report the market as weak, with best heavy steers down to 27 cents.

The hub of the leather trade has been this week at the Agricultural Hall, London, and a record attendance has been made. Buyers from the Continent have been well in evidence, and a large number of tanners and shoe manufacturers from the various centres were well to the fore. At time of writing it is not possible to summarise the business done, but from what I could gather on the spot inquiries have been frequent, and here and there actual business done in sole leather and upper stock on the lower basis of values. Tanners seemed anxious to sell, and at last have taken their courage in both hands, and have made up their minds to cut their loss. Big blocks of bends are reported to have changed hands at a much lower range of values, whilst makers of upper leathers have not refused offers at anything which looked like a reasonable basis of value. A feature of the Fair was the constant inquiry for cheap stuff, and I judge by this shoe manufacturers are now doing their best to meet the insistent public demand for a much cheaper boot.

Shoe manufacturers had a fine show at the Fair, and from an inspection of the stands I have come to the conclusion that we have very little to learn from oversea competitors. Business, however, is dull in the shoe centres, and short time is general.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, October 8.

General trading conditions throughout the period under review were of a decidedly quiet character, as, apart from industrial unrest and financial stringency forming a barrier to anything like normal trading, the question of rates of exchange still proves very troublesome. In fact, the latter element is seriously affecting various markets at the moment, and there is a marked tendency on the part of consumers to restrict operations to wants of immediate necessity.

SUGAR.—A quiet demand ensued for free parcels, and the little business done was mainly confined to crystallised West India, supplies of which are now getting into a very narrow compass. Sales resulted at 97s to 103s, as to quality. White Mauritius sold, 115s; American granulated, 118s 6d. American syrup nominal, while quite neglected. Good mid quoted 44s to 45s. Honey steady in value, but trade is slow.

COFFEE.—Spot market very quiet, an absence of export demand being still felt, while home-trade buyers operate with certain reserve. Prices on balance show little or no alteration. Some bold colory Nicaragua offered in auction sold well at 126s to 128s for bold sizes, and good hard bold Costa Rica at 140s 6d. Terminal market continued very quiet.

COCOA.—Actual trading was again very restricted during the week, and the market is largely nominal. No auctions were held.

TEA.—In auction, 42,000 packages Indian and 37,600 packages Ceylon were submitted to auction, and while all really fine qualities sold well at full recent prices, common and thin liquoring descriptions proved rather quiet of sale at prices showing some irregularity.

RICE steadily held, but trade moved slowly. No. 2, Rangoon, October-November, sold, 37s. Rangoon bran dull, at £13 10s to arrive. Beans and peas met with slow support.

SPICE.—A moderate business transpired in pepper, and general steadiness governed the market, being dearer in forward positions. Fair black Singapore, spot, sold, 6¾d; ditto, October-December, 6¾d to 6⅞d; Lampong, spot, sold, 7d; Aleppy, 7¼d; Tellicherry, 7⅜d; white Singapore, 1s 2½d; Muntok, 1s 3½d; ditto, October-December, 1s 1½d to 1s 1⅝d. Zanzibar cloves, spot, sellers, 1s 8d; pimento, sellers, 4d. Tapioca steady, quiet. Fair flake, spot, 2d; ditto, October-December, 21s 6d; fair Penang seed pearl, spot, 25s 6d; ditto, October-December, 24s. Small sago, spot, 34s to 36s; sago flour, October-December, 21s; farina, spot, 31s 6d; October-December, 29s 6d. Desiccated coconut, fine cut, spot, 85s; medium, 92s; half and half, October-November, sold, 80s.

JUTE.—The downward move made further progress throughout the week, the one disturbing factor just now being the question of rate of exchange. Holders of secured parcels continued to press, and with buyers reticent a dull and depressed tone ensued. Calcutta cables were of a steady nature. Native first marks assortment, old crop, subs, September-October, usual ports, sold, at £46; new actuals, ditto, £55 to £52; subs, £50 to £46 10s; Daisee No. 2, ditto, £51 to £47; lightning, actuals, new, October-November, £39; subs, £38 10s to £37. Calcutta hessians and also twills were adversely affected by rate of exchange, as in the case of the raw material. 10-oz hessians, November-December, sold, 50s to 48s; 8-oz, ditto, 38s; A twills, November-December, 115s; B, 106s; D.W. salts, at 90s, c.f. and i., United Kingdom. Nitrates, January-February, sold, 79s 6d to 75s, c.f. and i. terms, Chili.

HEMP.—Manila met a quiet demand, but in face of stiff advices from America concerning Sisal, sellers adhered to steady asking prices. J grade, October-December, £68 10s; K, ditto, £58 10s; L, £58; and M, £47. New Zealand nominally unaltered, East India quiet, and No. 2 Benares, November-December, quoted £33. Italian slow.

SHELLAC.—Market rather irregular forward, and trade quiet. Fair standard T.N., spot, 640s; October, sold, 605s to 600s; and December 555s to 570s, 550s.

FRUIT.—In auction this week, some 157 tons Valencia raisins were offered, but same included very few attractive qualities. A rather quiet demand ensued, and prices realised were subject to some irregularity. Finest ruled firm, but lots out of condition were easier. Quarter-boxes sold, 130s to 146s; choice parcels, from 152s to 161s; seedless, 135s to 146s; Australian seedless, 132s; and South African, 100s. Currants move off slowly. New Pyrgos, 84s to 87s; Gulph, 95s to 100s; Vostizza, 105s to 107s. Old Smyrna sultanas sold, 130s to 136s; new, 150s to 170s. Figs, new layers, 148s; pulled, 200s.

COPRA.—Market easier, and business of moderate proportions. F.M.S. Straits, October-December, London, sold, £58 5s to £57 15s;

GIRARD TRUST COMPANY

Special facilities are available for Exchange Business on Japan, China, India, Straits Settlements, Dutch East Indies and France, where the Bank has special working arrangements with Cox & Co. (France) Ltd. Deposits are received for fixed periods on terms which may be ascertained on application.

November-January up to £59; ditto, Rotterdam, £59 10s; Ceylon, October-December, London, £59 10s to £58 10s; ditto, Rotterdam, £60 5s to £59 10s; and F.M. Straits, October-December, Marseilles, £57 15s to £56 10s. Palm kernels rather unsettled. October-December, sold, £41 15s to £40 5s and £39.

MENTHOL.—Kobayashi and/or Suzuki, spot, sold, 28s; peppermint oil, ditto, 6s 7½d; aniseed, 4s 1d; slab camphor, 6s 6d per lb. Japan wax, spot, 115s cwt.

EGG PRODUCTS.—Only quiet trading resulted this week, but prices were without material alteration. Liquid hen yolk, spot, old season's, 90s; new, 110s; October-November, 100s per cwt. Dried yolk, spot, 10d; native dried whole egg, spot, 11d; spray ditto, 1s 10d; hen albumen, spot, 4s 10d per lb

RUBBER.—Market very unsettled, and mostly weaker on continued weakness in America. Plantation crepe, spot, sold down to 1s 5¼d, since 1s 6d; October-December, 1s 5¾d to 1s 6⅛d; January-March, 1s 6¾d to 1s 7¾d; January-June, 1s 7½d to 1s 8½d; April-June, 1s 8¼d to 1s 9d. Sheet, spot, sold down to 1s 2¼d, but later at 1s 3⅛d; October-December, 1s 3⅞d to 1s 4d; January-March, 1s 4½d, then 1s 5½d. Fine hard Para, spot, 1s 6½d.

OILS.—Linseed irregular. Spot, net, naked, 77s; October-December, 76s. Rape firm. Crude, spot, 75s; refined 90s. Cotton easier. Crude Egyptian, 69s; Bombay, 59s; refined edible, 94s. China wood firm. Hankow, spot (barrels), 109s; and Hong Kong, spot, 106s. Palm kernel firm. Crushed, spot, 88s; extracted, 87s. Palm firm. Softs, October-December, 63s; Lagos, 64s 6d. Coconut dearer. Ceylon, spot, sold, 97s; September-November, 96s; Cochin, ditto, 98s. Soya quiet. Oriental, afloat, 75s; October-December, 74s; deodorised, 90s. Japan fish quiet. September-November (cases), 43s. Cod liver dull. English, spot, 47s. Groundnut firm. English crushed, naked, spot, 85s 6d; deodorised (barrels), 104s. Turpentine easier. American, spot, 136s 9d; October-December, 138s; January-April, 141s 9d. Rosin quiet. American, grade B, 46s; F, 49s; G, 49s; K, 51s; M, 52s; WW, 54s; French, F/G, 45s 6d; H, 45s 6d; WW, 47s; extra pale, 48s. Petroleum firm. American, spot, 2s 4¼d; and water white, 2s 5¼d per gallon.

OILSEEDS.—Linseed: market irregular. Calcutta, afloat, sold, £39 to £38; September-October, sold, £38 10s to £36 15s and £38; Bombay, September-October, £39; Plate, afloat, Hull, sold, £35 10s to £34 10s; September-October, sold, £34 10s to £32 10s and £34; January-February, new crop, £33 10s to £31 10s and £33 10s. Rapeseed easier. Toria, September-October, Antwerp, £35 5s; real bold Ferozepore, £34 5s; brown Cawnpore, £32. Cottonseed dull. London Egyptian, f.a.q., September-October, £19 10s. Bombay, spot, £14 10s; September-October, at £14 10s. Gingelly steady. Chinese, afloat, to Continent, sellers, £49. Groundnuts quiet. Coromandel, October-November, £38 10s.

METALS.—Tin opened firmer last Monday, though values were since below the best, cash being registered at £272 10s to £271, and three months at £279 to £277. Selling continued until Thursday, when prices of these dates fluctuated down to £267 10s and £272 10s respectively. At Friday's session a fair amount of selling led to a setback in prices, cash moving between £265 10s and £266 10s, and three months' £273 down to £270—finally £270 10s. English ingots, £263 to £264. Copper: The standard market moved in an upward direction until the middle of the week, while a good demand prevailed, with sellers exercising certain reserve, cash reaching £97 5s, and three months £97. Thursday's market further hardened on renewed supporting orders, cash (next week) being done at £98 to £98 10s, and three months at £97 10s to £98. The tendency was weaker at Friday's session, a good business being concluded, cash at £98 10s, three months' £97 15s to £97 10s. Electros £110 to £115; best selected £104 to £105. Lead steady at £34 7s 6d to £34 5s. Spelter quiet at £40 2s 6d to £41 7s 6d. Antimony: English, Regulus, ordinary to best, £52 to £55. Aluminium: Home trade, £165; export, £185 Wire bars, £114 to £115.

TALLOW.—Messrs Colchesters and Woolner write on October 6th as follows:—The tallow market was firm during the week, and prices were mostly 1s dearer to-day. The shipments from Australasia in August were 5,300 tons. The stock in London on September 30th, as returned by the wharves, amounted to 20,888 packages, being a decrease during the month of 4,824 packages. At auction to-day 1,963 casks tallow were offered, and 1,503 were sold. Quotations are:—Australian mutton: Fine, 81s; good to fair, 78s 6d to 75s; dull to dark, 69s to 62s 6d; hard, 89s 6d. Australian beef: Fine, 86s 6d; good to fair, 75s to 71s; dull to dark, 68s to 63s; sweet, 89s 6d. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 75s; and mixed, 43½, c.i.f., London, 74s. The market letter is unchanged for stuff, tallow 1s dearer. Town tallow, 66s per cwt. Rough fat per 8 lbs, 8d to 1s 4d; melted stuff, 51s per cwt. Quotations are:—Town: 63s net cash, naked, ex works. Country: Frail casks, 56s; home melted, shipping casks, net, f.o.b., good coloured, none; fair to dull, 65s to 61s. Bone fat: White, none; pale, 62s; benzine, 56s; melted stuff, 57s, f.o.b.

At Constantinople—

THE Guaranty Trust Company of New York announces the opening of an additional Office at Constantinople, the commercial centre of the Near East.

This office is a complete bank, equipped to accept deposits, finance shipments, and to make collections, to buy and sell foreign exchange, issue letters of credit, and to offer all other forms of banking service.

It is in close touch and acts in co-operation with the Main Office and other offices of the Company, and has at its disposal the resources and facilities of this world-wide organization.

Guaranty Trust Company of New York

South Reef	6,900	8.1	48
Total	1,186,000	7.6	49

The full Report and Accounts (with plan of workings) may be obtained from the London Secretaries, A. MOIR AND CO., No. 1, London-wall-buildings, London, E.C.2.

A COPY OF THIS PROSPECTUS HAS BEEN FILED WITH THE REGISTRAR OF JOINT STOCK COMPANIES.

Application is being made to the Committee of the Stock Exchange for special permission to deal in these Shares after Allotment. No part of this Issue has been or will be underwritten.

The SUBSCRIPTION LIST will CLOSE on or before SATURDAY, 16th October, 1920.

LEVER BROTHERS, LIMITED,

PORT SUNLIGHT, CHESHIRE.

(Incorporated under the Companies Acts, 1862 to 1890.)

CAPITAL.

Authorised. £		Issued and Fully Paid. £	s.	d.
40,000,000	in 40,000,000 7% Cumulative Preference Shares of £1 each	22,267,506	0	0
40,000,000	in 40,000,000 8% Cumulative A Preference Shares of £1 each	10,979,437	0	0
10,000,000	in 40,000,000 20% Cumulative Preferred Ordinary Shares of 5s each	1,500,000	0	0
10,000,000	in 10,000,000 20% Cumulative A Preferred Ordinary Shares of £1 each	—		
10,000,000	in 10,000,000 20% Cumulative B Preferred Ordinary Shares of £1 each	262,000	0	0
10,000,000	in 40,000,000 5% Cumulative Preferred Ordinary Shares of 5s each	718,666	5	0
10,000,000	in 1,000,000 Ordinary Shares of £10 each	2,280,000	0	0
130,000,000		38,007,609	5	0

The respective shares will rank for priority as regards both Capital and Dividend in the order of the Authorised Capital set out above. A member is entitled to one vote for every share of £10, one vote for every 10 shares of £1 and one vote for every 40 shares of 5s.

CO-PARTNERSHIP CERTIFICATES.

After payment of all Preference and Preferred Ordinary dividends and 5% on the Ordinary shares in respect of any year further amounts available for dividend and proposed to be distributed by way of dividend for any period are subject to the terms of a Co-Partnership Trust Deed made in 1909 and Supplemental Deeds thereto under which employees of the Company and its Associated Companies participate on Co-Partnership Certificates held. The terms of the Deeds do not affect the rights of the Preference and Preferred Ordinary Shareholders.

Issue of 8% Cumulative A Preference Shares of £1 each at par, payable as follows:—

1s. per Share on application. 9s. per Share on allotment. 10s. per Share on 30th November, 1920.

The first Dividend thereon will be payable on 1st January, 1921, and will accrue from the dates of the instalments commencing with the date of allotment.

From 1st January, 1921, these shares will rank equally with the shares of the same class already issued.

Applications from shareholders and customers of the Company will receive special consideration.

PROSPECTUS.

The present Company of Lever Brothers, Limited, was formed in 1894 to acquire the business of Soap and Glycerine Manufacturers carried on at Port Sunlight and elsewhere prior to the 17th May, 1890, by the firm of Lever Brothers, and subsequently by Lever Brothers, Limited (incorporated in 1896), the Vendors to the present Company.

In addition to its business at Port Sunlight, the Company holds interests in over 100 Associated Companies with numerous branches or selling agencies throughout the world.

During the current year the Company has acquired and paid for 1,227,165 out of a total issue of 1,250,000 ordinary shares in the Niger Company, Limited, at the price of £6 10s. per share. In the opinion of the directors this transaction greatly strengthens the position of the Company by safeguarding the supplies of West African oils and oleaginous seeds and nuts, which in this country are used very extensively in the manufacture of Soap and Margarine.

The present issue is being made to provide for capital expenditure incurred in connection with the business of the Company and certain of its Associated Companies. **The Company therefore invites applications for the above-mentioned 8 per cent. Cumulative "A" Preference Shares of £1 each at par up to but not exceeding 4,000,000 shares.**

The following figures showing the growth of the business of the Company have been extracted from the Company's Balance-Sheets as certified by its Auditors, Messrs. Cooper Brothers and Co.:—

	Paid-up Capital.		Dividends to Shareholders and Co-Partners.	Rate of Ordinary Dividend.
	£	s	£	%
Year ending 31st Dec., 1913	11,713,424	0	839,891	15
,, 1914	13,247,598	0	970,773	10
,, 1915	14,001,838	5	1,092,823	10
,, 1916	14,023,518	5	1,141,175	10
,, 1917	15,202,799	0	1,325,530	15
,, 1918	17,065,340	10	1,547,635	17½
,, 1919	25,707,312	5	1,935,030	17½

For the year 1919 the sum of £500,000 was placed to Special Reserve.

Out of the profits of the company for the half-year ending 30th June last an interim dividend at the rate of 20 per cent. per annum was declared on the Ordinary Shares. The directors anticipate that the available profits for the current year will be sufficient to maintain this rate of Ordinary dividend after payment of dividends on all preference and preferred ordinary capital and making ample provision for reserves.

The Company has guaranteed the due payment of the annual interest amounting to £240,000 on outstanding debentures and debenture stock of certain of the Associated Companies; but the Directors do not anticipate any call upon the Company in respect thereof.

The Company will pay a brokerage of 3d. per share upon all shares allotted on applications bearing a Broker's stamp.

Continued on next page.

LEVER BROTHERS, LTD.—*Continued from previous page.*

Application will be made to have the present issue added to the official quotation on the London Stock Exchange, and also at Liverpool, Manchester, Birmingham, Bristol, Leeds, Glasgow, Dublin and Belfast.

The following further information is given pursuant to Section 81 of the Companies (Consolidation) Act, 1908 :—

In November, 1918, 1,000,000 B Preference Shares, bearing dividend at 6½ per cent., were offered at the price of 20s per share for public subscription, and the whole thereof allotted on 4th December, 1918.

In May, 1919, 2,000,000 B Preference Shares, bearing dividend at 6½ per cent., were offered at the price of 20s per share for public subscription, and the whole thereof allotted on 19th May, 1919.

In October, 1919, 4,000,000 C Preference Shares, bearing dividend at 7 per cent., were offered at the price of 20s per share for public subscription, and the whole thereof allotted on 21st November, 1919.

In February, 1920, 4,000,000 C Preference Shares, bearing dividend at 7 per cent., were offered at the price of 20s per share for public subscription, and the whole thereof allotted on 16th March, 1920.

In June, 1920, 8 per cent. Cumulative A Preference Shares to an amount up to but not exceeding 4,000,000 Shares were offered at the price of 20s per share for public subscription, and the whole thereof allotted on 25th June, 1920.

All the above Shares have been fully paid, and amongst other expenses connected with the issues, excepting the one in June, 1920, underwriting commission of 2½ per cent. on the nominal amounts of the issues was paid.

The dates and names of the parties to the following contracts which have been entered into within the past two years are here set forth as being probably within the purview of Section 81 (k) of the Companies (Consolidation) Act, 1908 :—

—24th October, 1918. Sanitas Co., Limited, and Lever Brothers, Limited. —13th November, 1918. Lever Brothers, Limited, and R. Nivison and Co. and Foster and Braithwaite. —25th April, 1919. Lever Brothers, Limited, and R. Nivison and Co. and Foster and Braithwaite. —9th September, 1919. (a) Richard Irvin, Senior, and Lever Brothers, Limited; (b) Charles Ocean Johnson and Lever Brothers, Limited; (c) John Dixon Irvin and Lever Brothers, Limited. —10th September, 1919. (a) Annie Irvin and Lever Brothers, Limited; (b) Peter Kaplan and Lever Brothers, Limited; (c) George Driver Irvin and Lever Brothers, Limited; (d) Richard Irvin, Junior, and Lever Brothers, Limited; (e) The African Fishing and Trading Company, Limited, and Lever Brothers, Limited; (f) Sir John Hannel Irvin and others and Lever Brothers, Limited; (g) Sir John Hannel Irvin and Lever Brothers, Limited; (h) Lily Irvin and others and Lever Brothers, Limited. —11th September, 1919. (a) John Ambrose Kitchen and others, J. Kitchen and Sons Proprietary, Limited, Associated Enterprises, Limited, Lever Brothers, Limited, and Lord Leverhulme; (b) John Hambleton Kitchen and Ambrose John Kitchen, Associated Enterprises, Limited, and Lever Brothers, Limited; (c) John Hambleton Kitchen and Lever Brothers, Limited; (d) John Hambleton Kitchen, Bennie and Kitchen, Limited, and Lever Brothers, Limited. —15th September, 1919. J. G. Jackson, Limited, James George Jackson and Lever Brothers, Limited. —22nd September, 1919. William Alford and Lever Brothers, Limited. —30th September, 1919. Lever Brothers, Limited, and R. Mees and Zoonen. —8th October, 1919. Lever Brothers, Limited, and R. Nivison and Co. and Foster and Braithwaite. —22nd January, 1920. The Right Honourable the Earl of Scarbrough and Clifford Blackburn Edgar, M.P., and Lever Brothers, Limited. —26th February, 1920. Lever Brothers, Limited, and R. Nivison and Co. and Foster and Braithwaite. —12th March, 1920. Lever Brothers, Limited, and Carl William Hamilton. —30th April, 1920. Lord Leverhulme and Lever Brothers, Limited. —28th June, 1920. Lever Brothers, Limited, and R. Mees and Zoonen. —30th June, 1920. Lever Brothers, Limited, and the Hon. William Hulme Lever. —18th August, 1920. Lever Brothers, Limited, and R. Mees and Zoonen.

A copy of the Memorandum and Articles of Association of the Company, the Balance Sheets 1913 to 1919 and the originals or copies of the Contracts referred to may be seen at the Registered Office of the Company by intending applicants for shares between the hours of 11 a.m. and 4 p.m. on week-days during the days the Subscription List is open.

The Company has during the past two years entered into numerous Contracts in the ordinary course of its business.

Applications for the shares must be made on the prescribed form and forwarded to the Company's Bankers with the deposit of 1s per share. Where the number of shares allotted is less than that applied for the balance of the deposit will be credited towards the amount due on allotment. Failure to pay either instalment when due will render the amount previously paid liable to forfeiture and the allotment to cancellation. Notice will be given when Share Certificates are ready for exchange for Banker's receipts.

Prospectuses and forms of application can be obtained from the Bankers and Brokers and at the Registered Office of the Company.

Dated 7th October, 1920.

No.....

FORM OF APPLICATION.

LEVER BROTHERS, LIMITED.

Issue of 8% Cumulative A Preference Shares of £1 each at 20s per share.

To the Directors of

THE MONEY MARKET.

PLENTIFUL money made the discount market easy in the early part of the week, but the publication of the official revenue return, showing 60 millions borrowed from the Bank of England on Ways and Means advances since the beginning of October, caused renewed caution and fears of a rise in Bank rate. On Thursday came a Bank return much more favourable than had been expected, and indicating that sales of Treasury bills have lately considerably exceeded maturities, and the market worked more freely, though the state of commodity markets at home and abroad, failures in Amsterdam, trouble in Mincing lane, a limited moratorium in Cuba, and general reports of big

stocks and unsaleable goods did not stimulate the demand for bills. Some scepticism, however, was expressed concerning the probable extent of the fall in commodity prices, and it was contended that as soon as the retailers meet the position by substantial reductions, a revived demand by consumers will alter the general outlook. Then came the news of the strike decision, adding another and most disastrous complication to a position that was already quite uncomfortable enough. But it had no practical effect on rates, bills being scarce.

* * * *

	Oct. 15, 1920.	Oct. 8, 1920.	Oct. 1, 1920.	Sept. 24, 1920.	Previous Rate and Date Changed.

* * * *

The Bank return showed a considerable improvement. Decreases of £41,000 in the stock of gold and £681,000 in the note circulation left the Reserve £640,000 higher, while Government securities were, to the general surprise, a few thousands lower, and Other had shrunk by 14¼ millions, thanks to repayments by the market and the maturing of bills that it had melted. There was thus a decrease of 13¾ millions in the deposits, Public falling 3 millions and Other 10¾. The circulation of currency notes rose by £301,000 to 356,477,200, which includes £3,171,300 for notes called in but not yet cancelled. The fiduciary issue is now £306,055,800, or £13,544,200 below the maximum.

* * * *

The following table shows Public Income and Expenditure for the nine days ended October 9th, 1920:—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	26·701	Supply Services	8·211
„ Borrowings	9·226	Interest on Debt	27·737
„ Exchequer Balances	·532	Sundries	·511
	36·459		36·459

These operations increased the debt by a sum of £9,226,505, and caused the following changes, which are reflected in our table of National Debt given in another column:—

	Mln. £		Mln. £
Bank of England Advances	+ 60·000	Treasury Bills	— 59·906
Public Departs. Advances	+ 8·250	Surrenders of Bonds, &c.	— 1·053
Treasury Bonds	+ ·170	Depreciation Fund	— ·500
National Savings Certificates	+ ·250		
Sundries	+ 2·015		
	+ 70·685		— 61·459

The official statement shows receipts from National Savings Certificates "under Finance Act, 1920," as £850,000 for the nine days. Customs and Excise brought in £6,041,000, Property and Income-tax £5,416,000, and Excess Profits Duties £5,737,000.

* * * *

After some improvement at the end of last week the New York rate fell away sharply yesterday, on the fear of a coal strike, and at 3.47½ is 3½ cents below the quotation on Friday last. On the whole, dealings have been restricted in volume. Futures are again somewhat wider, at one to one and a-half cents per month above spot. Rates in general show that the markets have ignored almost completely the results of the Financial Conference in Brussels, such as they were, there being no sign of the usual sentimental improvement that has followed almost every conference since the Armistice, however unsuccessful it may have been. In Paris, after some irregular movements, the franc was quoted yesterday at 53.30; at about 80 centimes higher on the week; in Brussels the movement has been from 49.85 to 50.45, so that the spread between Belgian and French francs is at 2.85f rather wider than before. The same tendency is shown in the quotations for futures, which for French francs is 20 to 25 centimes per month below spot, for Belgian francs 30 to 35 centimes. For the lira there was a sharp recovery at the end of last week, and although there has been a reaction later, it was quoted yesterday, after some further irregular movements, at 88.50, a slightly better rate than a week ago. Madrid on Saturday last moved sharply in our favour, and in spite of an adverse movement yesterday, shared by all the other neutral exchanges, remained at 24.17½, well above last Friday's quotation of 23.88. Switzerland, after moving in our favour, ended the week almost unchanged, as also did Amsterdam, in which case a sharp rise in the early part of the week was counteracted by the sale of securities from the Dutch side. Stockholm was on balance some 10 ore against us at 17.75, but Christiania and Copenhagen both continued to rise rapidly. As the result mainly of the increasing understanding of the difficulties of Germany's position, the mark is continuing its recent collapse, being quoted on Friday at 244, as compared with 223 a week ago, the brighter prospects of a meeting at Geneva having had no effect on quotations. The quotation of par to ½ mark below spot per month for futures is a further illustration of the feeling of the market. After a sharp recovery on Tuesday as the result of bear purchases silver has fallen away again. The Shanghai rate has continued to fall away, being down to 5s 4d, as compared with 5s 6d a week ago. The rupee, after being down at 1s 7d, has recovered to 1s 8d, and so remains unchanged on the week. If reports from China are reliable, the outlook for silver remains disquieting.

EVENTS OF THE WEEK.

OCTOBER 9TH.—Prime Minister's speech at Carnarvon on Irish question. Correspondence between Lord Curzon and Soviet Government on trade relations issued. Petrol reduced 3d per gallon.

OCTOBER 11TH.—Miners' ballot begins. Mr Theodore secures majority of six in Queensland elections. Announcement of moratorium in Cuba.

OCTOBER 12TH.—Air Conference opened at the Guildhall. Miners' ballot concluded.

OCTOBER 13TH.—Sir Hamar Greenwood declares Government's policy on Ireland at Belfast.

OCTOBER 14TH.—Majority of miners' ballot against datum line. Miners' delegates decide strike notices must stand. Prime Minister sends letter to Mr Smillie. Soviet Russia's reply to Lord Curzon issued. Mr Asquith speaks at Ayr on Ireland.

OCTOBER 15TH.—Foreign coal export stopped.

THE COAL STRIKE AND AFTER.

THE miners' delegates on Thursday decided by a large majority to allow the strike notices to expire to-day. Unless, therefore, some unexpected development takes place during the week-end, the twice postponed general strike in the British coalfields will begin on Monday. We are sure that the executive of the Miners' Federation, and the delegates from the colliery districts, have in no light spirit arrived at this momentous decision. They are, after all, delegates, and not plenipotentiaries. The ballot of August last, which decided, under certain conditions, for a strike, still stands, although those conditions are no longer insisted upon in their entirety. The ballot of this week has pronounced, as we were afraid that it would, emphatically against the principle of fixing wages in accordance with mass output. The principle was too novel, and the application was too vulnerable to individualist criticism, to command acceptance at the first time of asking. The country is, therefore, flung back upon that part of the original demand which insisted upon an immediate advance in wages of 2s per shift (roughly 10s a week on the average), and a strike is called to enforce this demand. Mr Smillie and other peacemakers among the leaders have failed.

The situation is serious, though not so grave as it would have been had the strike taken place four weeks ago, as was originally feared. The delay has been of much value. The public have clearly become informed of the issues at stake, and have made no secret of their strong opposition to war between the coal miners and the country. In the eyes of the plain man and woman, the offer by the Government of an impartial tribunal, to decide upon the justice of the claim to an increased wage, was a fair offer. In the eyes of many of the miners themselves, it was a fair offer. That offer has been refused, although no intelligible reason has been put forward for the refusal. Not only have the public become thoroughly conversant with the issues, but sharp differences have arisen between the miners' leaders and between the peace and war schools among the miners themselves. Ranks may be closed if the strike takes place, but the enthusiasm and driving power which are necessary to success in industrial warfare will be lacking. A strike so half-hearted, a strike to which the threatened public will oppose so resolute a front, a strike, moreover, which must rapidly destroy all prospect of that increase in wages for which the men are striking, such a strike cannot be successful even in the most narrow and particularist sense. But it may do a vast amount of harm to the industries of this country, and bring a vast amount of misery into the homes of millions of innocent people.

There are some hopeful features. A coal strike is slow in operation; it does not instantly paralyse industrial activities. It operates like a naval blockade—by slow strangulation. Even if the miners all over the country come out on Monday, large numbers of them will be eager to get back. The leaders, too, though anxious to secure the demands of their followers, are intensely apprehensive of the effects of a long-drawn-out war. The railway men, the transport workers, and other trade unionists regard a long coal strike with grave apprehension. They know what it must mean while it endures, and must involve in its after-effects. Parliament meets on Tuesday, and through the House of Commons the public will be able to exert their dominating influence. We cannot bring ourselves to believe, when we consider all the potent forces which will be working for peace, that a general coal strike will be long maintained. Even at this twelfth hour the miners have before them the offer of the Government to accept the judgment of an impartial tribunal upon their wage claims. That offer will remain open, but every day which passes without coal being raised will make more financially difficult the establishment of the miners' case. They are claiming to divide up future profits which their own action will have made impossible of realisation. This is a fight which the miners cannot win, and in which we must all lose.

BRUSSELS.

(BY ONE WHO WAS THERE.)

THE obvious results of the Brussels Financial Conference are few. No panacea has been found for the world's economic ills, and indeed it is remarkable with what unanimity the various widely advertised schemes for financial salvation, based one and all on one or other form of still more inflation, were rejected. Nor has any plan been evolved under which the Governments of relatively prosperous States shall help out their weaker neighbours. In view of the definite attitude adopted by both the United States and Great Britain towards the question of Government credits, there could be no question of proposals involving direct Government assistance to foreign States. The only scheme of this kind which received serious attention was that of M. Delacroix, the Belgian Prime Minister, for an International Bank, but this, too, had no chance of adoption, partly because it too involved direct Government action, and partly through its own inherent weaknesses.

On the other hand, the tendency to minimise the importance of the resolutions adopted is unfortunate. It is easy to dismiss them as platitudes, but these platitudes are the basis of any economic recovery of Europe, and it is no small thing to have got them accepted by the official representatives of all the thirty-nine States represented at the Conference. Before the world can get right again it has got to see and to think clearly, to understand the full horror and difficulty of the situation in which the war has left us, and to clear away the confusing cloud of theories and nostrums by which recovery is delayed. And to this end the contribution of the Conference is by no means small. Its early sessions were made somewhat wearisome through the presentation by the delegates of each State of a survey of the financial and economic position of the country they represented. Their cumulative effect, however, was important, in revealing the full difficulty of the position. In Europe, at least, hardly any country (one in twelve) can make its budget balance, and every country, through ill advice or through despair, has broken some or all of the vital rules of a sound economic life. In the first place, therefore, the Conference set itself to reassert these vital rules. It may, of course, be said that to offer these counsels of perfection, the main part of which were reported at the time in the Press, to bankrupt

or semi-bankrupt States is little more than mockery; but there is no escape from the conclusion that budget deficits result in further inflation, in further collapse of the exchanges, in further increases in the cost of living, and in the end in general ruin, and that if States will not or cannot help themselves others will not help them. There is no doubt that the difficulties of many countries are almost insuperable, but there is also no doubt that many of these countries have buoyed themselves up by false hopes of outside assistance, and have refused to face the hard facts before them. If the Conference has done nothing more than destroy these hopes, it will have justified itself by that alone. In particular it has emphasised the criminal folly of an expenditure on armaments, which still amounts to an average of 20 per cent. of the budget expenditure of each State, the hopelessness of recovery so long as real peace is not restored, the necessity of the general restoration of good will and mutual assistance between nations formerly at war, and in particular of co-operation between the new nations formed as a result of the war, in place of the artificial boundaries which have been everywhere set up against the unrestricted interchange of commodities. It has, too, demanded, but with a certain diffidence which shows the extent of the feeling which this question aroused, a restoration of that freedom of commerce which prevailed before the war, and the abolition of price discriminations against external trade. As the best that it can offer, apart from measures to facilitate the extension of "finishing credits" and the development of "export insurance" by private organisations, it proposes a plan to strengthen the credit of necessitous States, with which we hope to deal next week.

These are the direct results of the Conference's work, or, rather, these with one other, and, as it may prove, perhaps the most important of all. As will be remembered, the question of reparation, with all its implications, was expressly excluded from the agenda of the Conference. And yet, so forcibly did the supreme importance of this question impress itself upon the delegates during the course of their work that the Conference has overstepped its restrictions, and has incorporated in its report the hope for a speedy settlement of that economic uncertainty which afflicts both those countries which are to pay and those which are to receive reparation, and the conviction that a settlement of these questions is essential for the recovery of both these groups. When it is remembered that the delegates of France, Belgium, and of Germany took part in the unanimous vote which registered this opinion, it will be seen that the Conference marks a definite, if a small, step towards a decision on what is perhaps retarding the restoration of normal economic life more than any other cause. This unanimous insistence on the settlement of reparation is one indication of the admirable attitude adopted throughout by the French delegates to the Conference. Before the meeting of the Conference, there had been some fear that its course might not be a smooth one, as French public opinion was clearly suspicious, and saw in it a possible weapon for forcing the hand of the French Government. Fortunately, these fears were in no way realised, as the clear and reasonable policy of the French delegates at once secured general confidence, and their action has resulted in a real increase in French prestige. The position of the British delegates was also somewhat difficult, as they had little to offer except the example, unavoidably irritating to weaker countries, of a more or less successful attempt to grapple with existing problems. It was due to the great tact of our delegates that this problem was successfully overcome without conveying the impression of hypocrisy with which we are so often accused. In particular, our delegates are to be congratulated in securing, against many powerful advocates, the acceptance by the Conference of the policy of deflation, of course gradual, as opposed to that of devaluation, and also that of dear money as opposed to the prevailing Continental doctrine of low rates. Neither the United States nor Germany were strongly represented, but while the impression made by the Germans was on the whole a good one, the chief American delegate perhaps went a little far in telling the Conference bluntly that Americans did not consider Europe at present to be a good business risk, and in pointing out the difference between the various States of Europe separated by tariff barriers and by political jealousies, and the members of the American Union, living together in amity and Free-trade. On the whole, however, the Conference has secured a real, if indirect, benefit in bringing together into the closest working co-operation, even for a short period, the leading bankers and financial authorities from so many States. The representatives of the weaker States have gone back strengthened in the conviction that sound finance is not only the right, but the only possible, policy for their countries if they are to secure foreign confidence and assistance, and the representatives of relatively prosperous countries have gained a far deeper insight than before into the difficulties of their neighbours.

NINE MONTHS' OVERSEAS TRADE.

THE much-talked-of trade decline does not as yet seem to find much reflection in the figures of overseas trade, for the Board of Trade returns for September show British exports higher in value than in August, and the September figures, on the whole, are satisfactory, though not reaching the exceptional excellence of the July record. Imports last month reached £152.7 millions, against £153.2 millions in August, British exports £117.6 millions against £114.9, with re-exports stationary at £13.4 millions. Compared with a year ago, the value figures for September and the nine months read as follows :—

MONTH of SEPTEMBER.

	1919.	1920.	Increase or Decrease in 1920.	
	£	£	£	%
Imports	148,588,572	152,692,339	+ 4,103,767	+ 2·8
British exports	66,500,628	117,455,913	+ 50,955,285	+ 76·3
Re-exports	15,748,678	13,350,608	— 2,398,070	— 15·2
Total exports	82,249,306	130,806,521	+ 48,557,215	+ 59·0
Excess of imports over total exports	66,339,266	21,885,818	— 44,453,448	— 67·0

NINE MONTHS ENDED SEPTEMBER 30.

	1919.	1920.	Inc. or Dec. in 1920.	
	£	£	£	%
Imports	1,166,459,071	1,501,190,564	+334,731,493	+ 28·6
British exports	541,346,048	1,007,278,036	+465,931,988	+ 86·0
Re-exports	98,251,012	180,458,482	+ 82,207,470	+ 83·7
Total exports	639,597,060	1,187,736,518	+548,139,458	+ 85·8
Excess of imports over total exports	526,862,011	313,454,046	—213,407,965	— 40·6

A comparison of the nine months' figures for this year and last affords cause for reasonable satisfaction. British exports have risen by nearly £466 millions, exports of British manufactured or mainly manufactured goods alone by £405 millions. Heavy raw material requirements have contributed largely to the import increase, raw cotton imports alone having risen by £88 millions. Re-exports of foreign and colonial produce have come near to doubling themselves, and the net result is a decline of £213 millions in the nine months' import excess. For the nine months, imports exceed exports by £313 millions, or roughly an average of £35 millions per month. According to estimates frequently referred to in the ECONOMIST, our "invisible exports" comfortably exceed that figure. Moreover, it is the last few months that have contributed most to the reduction of the import balance. For the whole of the September quarter imports only exceeded exports by some £52 millions, or about £17 millions per month. On the export side the following individual increases over the corresponding nine months of 1919 are noteworthy :—

	Million £
Coal	+ 21·8
Coke and manufactured fuel	+ 10·7
Iron and steel and manufactures thereof	+ 50·3
Cotton, yarns, and manufactures	+146·5
Woollen and worsted yarns and manufactures	+ 39·2
Machinery	+ 21·7
Apparel	+ 20·5
Vehicles	+ 32·4

Our coal exports, though higher in value by £21 millions, were actually less in quantity by nearly 7 million tons. The motor-car figures are interesting. In the past nine months we imported 38,515 "touring cars, commercial vehicles, and chassis," to the value of £12,646,273, while "motor-cars and other parts thereof," imported, were valued at £6,320,529, while we exported 5,281 of the former category for £3,975,453 and our exports of "motor-cars and other parts thereof" were valued at £1,426,924. The following figures of shipping engaged in the foreign trade show some considerable improvement over 1919, but the figures are a long way below those of 1913:—

Nine Months Ended Sept. 30.	Entered with Cargoes. Tons.	Cleared with Cargoes. Tons.
1920	27,057,045	27,527,565
1919	21,012,477	24,992,456
1913	36,429,715	50,383,096

Gold exports for the last nine months amounted to £58,323,690, of which nearly £22 millions went to the United States, and almost as much to British India. In the month of September alone the United States took from us gold to the value of over £6 millions out of total gold export of £7,365,563. Gold imports were £32,169,936 for the nine months, and £2,248,753 for September.

In the September returns raw cotton imports declined in value, as compared with September, 1919, by over £7 millions, the quantity taken being less than half. Exports of cotton goods, on the other hand, were nearly £20 millions higher.

The Board of Trade has issued an estimate of the weight of imports and exports in the four months of May, June, July and August of this year, as compared with the corresponding period of 1913, which reads as follows:—

Month.	Imports. 1913.	Imports. 1920.	Imports. Decrease	Exports. 1913.	Exports. 1920.	Exports. Decrease
	Tons.	Tons.	%	Tons.	Tons	%
May	4,496,000	3,876,000	13·79	7,656,000	3,499,000	54·30
June	4,947,000	4,150,000	16·11	7,663,000	3,280,000	57·19
July	5,453,000	4,195,000	23·07	8,703,000	3,657,000	58·00
August	4,898,000	4,302,000	12·17	7,396,000	3,184,000	56·95

It is stated that "the reduction in export traffic, as compared with 1913, is mainly due to the decrease in coal traffic." The extent to which coal exports have declined in quantity and increased in vaue is shown strikingly by the following figures taken from the September returns:—

Coal Exports in Nine Months Ended September 30.

	1913.	1920.
Quantity ..... tons	54,517,788	19,851,555
Value ..... £	37,632,156	78,492,476

The Ministry of Transport has now begun to issue for the first time statistics of the trade passing through each of the ten chief ports of the United Kingdom, which is a useful innovation.

Tables showing imports and exports for September and the first nine months of 1919 and 1920, are given below, classified under 42 heads:—

Imports (Value C.I.F.).

	Month Ended September 30. 1919.	Month Ended September 30. 1920.	Nine Months Ended September 30. 1919.	Nine Months Ended September 30. 1920.

INDUSTRIAL PROFITS.

Our quarterly statistics of the profits of industrial companies show an exceptionally large increase in profits, but as they relate to accounting periods which close for the most part on March 31st or June 30th last, they cannot be taken as an index to present conditions. It should be explained that the figures are obtained by combining the statistics published each week in the Economist analysing the profit and loss accounts of reports appearing during the week, mining, insurance, and railway companies being omitted, while banks are treated separately in the special half-yearly banking numbers. Profits for the previous year, when obtainable, are given in the weekly table, and a comparison from quarter to quarter is thus obtained. It must be borne in mind that the following figures of profits do not relate to profits earned during the past three months, but to profits disclosed during that period. These profits may have been earned in some cases in the year ended December 31, 1919, or even farther back still, for unfortunately all company directors are not equally prompt in submitting their accounts. On the other hand, in a few isolated instances the reports analysed refer to the year ended August 31st last. The majority, however, cover the period from March to March or June to June last, during the greater part of which the excess profits duty was levied at the rate of 40 per cent., while in the previous year the rate was 80 per cent. This, no doubt, accounts in large measure for the substantial increase in profits shown in the figures below.

During the past quarter 252 reports were analysed, showing aggregate net profits, after payment of debenture interest, &c., amounting to £27,032,500, an increase of £7,987,100, or nearly 42 per cent., as compared with the previous year. The table below shows the figures for each of the past three quarters, the increase for reports published during the past nine months amounting to over 34 per cent. :—

	Number of Companies.	Reports Published in 1919.	Reports Published in 1920.	Increase.	
		£	£	£	%
First quarter	500	34,590,797	43,926,134	9,335,337	26·9
Second quarter	355	25,974,556	35,778,799	9,804,243	37·8
Third quarter	252	19,045,351	27,032,462	7,987,111	41·9
	1,107	79,610,704	106,737,395	27,126,691	34·1

The average profit per company works out at £107,300 for the past three months as compared with £75,500 for the corresponding period of 1919. An analysis of the figures by groups gives the following results for the past quarter :—

Net Profits (After Payment of Debenture Interest, &c).

	Number of Companies.	Reports Published in Quarter Ended September 30. 1919.	Reports Published in Quarter Ended September 30. 1920.	Increase.	
		£	£	£	%

Tramways	5	75,639	89,745	14,106	18·7
Trust companies	9	361,340	527,234	165,894	45·6
Waterworks	5	12,006	14,851	2,845	23·6
Miscellaneous	62	3,263,832	4,387,583	1,123,751	34·5
	252	19,045,351	27,032,462	7,987,111	41·9

For the first time since the figures were classified into separate groups no declines in profits are shown, although in the land group the increase is quite small. It should be mentioned, however, that there are two motor and cycle concerns included in the miscellaneous group whose profits are lower than in the previous year. There are cases, too, of course, in several of the groups of individual companies showing a decline in profits. The most prominent increase is shown by rubber companies, a group that was admittedly hard hit by the high rate of excess profits duty. The large increase under oil is chiefly due to the figures of the Shell Transport and Trading Company. Textile and investment trust companies also show increases well above the average.

The next table shows the manner in which profits were appropriated in each of the three quarters of this year :—

Distribution of Profits.

	Net Profits.	Ordinary Dividend.		Preference Dividend.		Reserve, &c.	
1920.	£	£	%	£	%	£	%
First quarter	43,926,134	21,797,686	49·5	6,515,017	14·9	15,613,431	35·6
Second quarter	35,778,799	19,472.761	54·3	3,591,611	10 1	12,714.427	35·6
Third quarter	27,032,462	16,252,981	60·0	2,357,136	8·7	8,422,345	31·3
	106,737,395	57,523,428	53·8	12,463,764	11·7	36,550.203	34·5

The amount going to ordinary shareholders has steadily increased, while a smaller proportion of profits has gone to preference shareholders and to reserve. The final column includes not only amounts set aside specifically to reserves and other funds, but also the amounts by which the balances carried forward exceed the amounts brought into the accounts. Although there has been a decline in the proportion of profits retained in the balance-sheets, the average for the nine months is still a high one. How profits were appropriated in each of the groups may be seen below :—

Distribution of Profits.

	Net Profits.	Ordinary Dividend.		Preference Dividend.		To Reserve, &c.	
	£	£	%	£	%	£	%
Breweries	5,084,205	2,713,410	53·2	518,678	10·2	1,852,117	36 6
Gas	138,610	115,249	83·0	5,916	4·3	17,445	12·7
Hotels, restaurants, &c.	281,428	91,661	32·5	113,275	40·0	76,492	27·5
Iron, coal, and steel	4,038,731	2,435,227	60·2	459,756	11 4	1,143,748	28·4
Land, mortgage, &c.	1,080,309	622,766	57·6	203,563	18 8	253,980	23·6
Oil	4,876,413	4,588,424	94·0	107,200	2·2	180,789	3·8
Rubber, &c.	1,795,750	1,300,691	72·4	2,402	0·1	492,657	27·5
Shipping	1,654,462	637,338	38 5	81,512	4·9	935,612	56·6
Tea	663,522	320,902	48·3	63,372	9·5	279,248	42·2
Telegraph, &c.	633,477	362,447	57·2	..	..	271,030	42 8
Textiles	1,766,142	640,774	36·1	98,219	5·6	1,027,149	58·3
Tramways	89,745	3,3847	38 2	25,701	28·3	29,· 57	33·2
Trust companies	527,234	391,475	74 2	34,130	6·5	101,629	22·3
Waterworks	14,851	12,908	86·9	3,794	25.4	*1,851	*12.3
Miscellaneous	4,387,583	1,985,322	45·4	639,618	14 6	1,762,643	40·0
	27,032,462	16,252,981	60 0	2357,136	8·7	8,422,345	31·3

Decrease.

The textile companies head the list in the matter of reserve appropriations, but shipping companies are a close second with the high proportion of 56½ per cent., which is over and above the large amounts set aside for fleet depreciation, &c., before striking profits. The oil group shows a low percentage, the Shell Company having paid no less than £4,507,600 in ordinary dividend out of a net profit of £4,713,400. The low proportion going to preference shareholders in this and in the rubber group is due to the relatively small amount of preference capital. The water companies drew to a small extent on their balances in hand in order to meet dividend payments.

The ratio of net profits and of amounts allocated to reserve, &c., to total ordinary and preference capital, works out as follows :—

	Total Ord. and Pref. Capital.	Net Profits.		Carried to Reserve, &c.	
1920.	£	£	%	£	%
First quarter	323,107,900	43,926.134	13·6	15,613,431	4·8
Second quarter	213,309,800	35,778,799	16·8	12,714,427	6·0
Third quarter	163,024,500	27,032,462	16·6	8,422,345	5·2
	699,442,200	106,737,395	15·2	36,750,203	5·3

An average return of over 15 per cent. on nearly £700 millions of capital over a period of nine months after payment of E.P.D. looks pleasant from the shareholders' point of view; while the fact that a sum equivalent to over 5¼ per cent. of the capital was reserved shows that a certain amount of necessary caution has been exercised.

The final table shows the average rates paid on debenture, preference, and ordinary capital in each of the

groups, together with the rate on ordinary capital shown in our article a year ago :—

	Debenture Capital.	Rate of Interest	Preference Capital.	Rate of Div.	Ordinary Capital.	Rate of Div.	Rate a Year Ago.
	£	%	£	%	£	%	%
Breweries.....	12,246,753	3·9	9,769,521	5·3	21,780,509	12·4	11·8

Shipping	193,700	4·5	2,125,0 0	3·9	6,641,000	9·6	11·1
Tea.....	125,240	5·8	1,205,107	5·2	2,491,400	12·8	15·8
Telegraph, &c. ..	81,675	4·4	..	..	1,822 499	19·8	13·7
Textiles	1,692,271	3·9	2,334,080	4·2	3,881,148	16·5	20·4
Tramways	1,358 040	3·6	562,020	4·6	1,500.942	2·3	0·1
Trust companies.	682,250	4·1	828,680	4·1	3,911,216	10·0	6·0
Waterworks	60,884	3·7	85,650	4·4	233,276	5·5	5 8
Miscellaneous ..	2,744,678	4·2	14,199,557	4·5	20,177,273	9 9	11·1
	31,409,003	4·1	48,675,601	4·9	114,348.871	14·2	10·8

The debenture and preference rates show no outstanding features beyond their similarity with previous records. The average rate of 14.2 per cent. on ordinary capital is considerably higher than usual, but with the exception of the oil group, which is accounted for by the 35 per cent. dividend of the Shell Company, there are no exceptionally high rates on ordinary capital, though the rubber, telegraph, and textile groups are well above the average. These percentages do not take into account any bonus distribution of shares or any issues of shares to proprietors below market value which may have been made.

LANCASHIRE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

DURING the first quarter of this year the boom in the Lancashire cotton industry was in full swing. Demand was active, and spinners and manufacturers were securing very profitable prices. In the three months April to June, business was much quieter, and values began to give way. During the past quarter the slackness has become much more pronounced, and, owing to the running down of engagements and the absence of fresh contracts, a state of depression has come round. It is now realised that the prosperity early in the year was artificial, and was largely the result of very favourable exchange rates with Eastern countries. Latterly the conditions have become very adverse, and a remarkable change has taken place since last March. The unsatisfactory developments are the result of a distinctly easier movement in raw cotton prices, together with increased financial stringency. It does not seem very long since demand for manufactured cotton goods exceeded supplies, but now difficulty is being experienced in clearing the production, and producers are taking action to reduce the output on an organised scale. The Master Spinners' Federation has decided to recommend the members to close their mills on Saturdays and Mondays for a month, and if this scheme does not bring relief the short time policy will be continued. So far united action has not been taken in the weaving department, but machinery is stopped on an extensive scale, and it is estimated that out of the 800,000 looms in Lancashire about 200,000 are standing idle for want of work.

During the past quarter there has been a striking drop in raw cotton prices. On July 1st fully middling American qualities on the spot in Liverpool were quoted at 26.62d. About the middle of that month there was a rise in values to 28.75d on the 21st, but the higher rates were not maintained, the figure on July 30th being 27.40d. Rather violent fluctuations occurred early in August, and on the 6th 28.60d was registered. An easier movement, however, set in, 26.70d being posted on the 19th. There was a very sharp fall during the next few days, and August closed with the figure at 22.91d. A reaction then took place, and the quotation on September 16th was 23.73d. Since then, however, there has been a steady fall in prices, 20.90d being registered on September 30th, whilst on Wednesday last the quotation was 17.77d. The American cotton crop for the season ending July 31st last amounted to 12,443,000 bales. This year the plants began badly, but later there was a steady improvement in the conditions, and, although some deterioration is taking place, there is a probability of the crop being nearly 13,500,000 bales. Owing to the trade depression, the demand for the raw material has been very poor, and recently the basis has been easier, it being possible for spinners to secure the medium and higher grades on more advantageous terms. For many weeks imports from the United States have been very small, and stocks in Liverpool have been reduced. The level of prices in the New York and Liverpool markets makes against heavy receipts in this country, and Liverpool firms cannot see their way to arrange imports on a free scale. Largely in sympathy with the fall in American cotton, there has been a decline in values in the Egyptian staple. The quotation on July 1st for fully good fair Sakellaridis was 62.00d. Rather higher figures were registered towards the end of July, the month closing with the rate at 67.00d, and on August 16th 71.00d was posted. An easier movement then occurred, and on August 31st the figure was 68.00d. A rather important drop took place during September, that month closing at 54.00d, and on Wednesday last 48.00d was registered. The Egyptian crop for last season amounted to about 6,000,000 cantars. For the current year the growth made a good start, and a month ago there were expectations of a record output of over 7,500,000 cantars. Recently, however, the plants have been adversely affected by hot winds, cold nights, and pests, with the result that some authorities are now putting out forecasts of 6,250,000 cantars to 6,500,000 cantars.

It has been a wretched three months for manufacturers of piece goods. From week to week the orders booked have not been anything like equal to the output of the machinery, and engagements have steadily run down. Shippers have held aloof, partly owing to unfavourable advices from abroad, and partly as a result of a strong belief in lower values. As an indication of the drop in prices, it may be said that at the end of June a well-known make of cloth suitable for printing was quoted at 93s a piece, whilst makers are now willing to sell at 68s 6d a piece. Three months ago a standard style of grey shirting was quoted at 50s a piece, whilst the price to-day is 40s a piece. The demand for our leading outlet of India has been very disappointing. Offers from Calcutta and Bombay have been quite unworkable, and as Manchester quotations have given way, there has been a fall in the bids from the other side. English makes in Calcutta have been adversely affected by severe competition from Japan, especially in the commoner qualities of goods. In certain districts of our dependency the monsoon season has not been satisfactory, and dealers in the bazaars are not meeting with a healthy offtake from the country districts. Since the beginning of this month there has been a marked fall in the value of the rupee, and this development has made the trade outlook worse than ever. With regard to China, there have been numerous attempts on the part of merchants to cancel contracts, and, although in most instances satisfactory arrangements have been made, dealers in Shanghai have not yet fully recovered from the panic which took place, and the prospects are not altogether bright in view of the famine conditions in certain parts of the Far East. The uncertain political situation has checked operations for European and Near Eastern outlets, but from time to time a very fair business has been done for South America. The slack state of trade has been felt very severely in all Lancashire weaving towns, and in Blackburn, Burnley, Preston, and other centres unemployment has increased, and cases are being reported of operatives being in distress. Home trade buyers have adopted a cautious policy, and business has been of a hand-to-mouth character.

In the following table particulars are given of our shipments of piece goods for the nine months ending September with the comparative figures for 1919 and 1913 :—

	Yards.		£
1913.....	5,250,278,900	....	73,659,119
1919.....	2,363,026,400	....	120,454,656
1920.....	3,540,677,100 (square yards)	....	242,732,477

So far this year on last we are exporting more freely to Bengal, Bombay, China, Egypt, Dutch East Indies, the United States, and the Straits Settlements, but shipments are decreasing to France, Denmark, Belgium, Switzerland, Germany, and the Netherlands.

A distinct change for the worse has occurred in the position of spinners of yarn during the past quarter. In all counts and qualities the margin of profit has been

narrowed, and it is now possible to purchase certain descriptions at prices which are practically unremunerative. The decline in quotations has been serious, and 32's American twist can now be purchased at 43d per pound, as compared with 55d per pound at the end of June. The rate for 40's American weft is now 40d per pound, against 51½d three months ago. A striking drop has taken place in the price of Egyptian yarns, and whereas 60's twist at the end of June was sold at 102d per pound, the quotation to-day is 67d per pound. At the time of writing the ballot of the spinning employers on the question of organised curtailment of production has not been completed, but it is anticipated that the recommendation of the Masters' Federation will be carried out, and the mills only work 35 hours a week instead of 48 for a month. Numerous spinners are experiencing the utmost difficulty in preventing the accumulation of stocks at the mills, and the stoppage of production in the Oldham factories for three weeks, as a result of the labour dispute, seems to have had very little effect upon the market position. Producers of yarn in both American and Egyptian sections are very gloomy at the moment, and improved conditions cannot prevail until there is a revival of demand in piece goods. Business has also been slow in the export department. Shippers have purchased very sparingly, and engagements are distinctly lighter than three months ago. A little more demand has recently been met with for the Near-East, but India buyers are only putting out very low bids which cannot be accepted.

In the table below particulars are given of our foreign trade in yarn for the nine months ended September, with the comparative figures for 1919 and 1913 :—

	Lbs.	£
1913	154,761,700	11,022,055
1919	120,017,700	24,449,748
1920	118,447,700	37,656,977

Compared with last year, we are shipping more freely to Bombay, the United States, the Netherlands, Germany, Bengal and China, but there is a falling off in the takings of France, Switzerland, Denmark and Norway.

The depression which exists in all sections of the industry is very largely due to bearish sentiment with regard to future prices, and buyers are holding aloof owing to the belief that more favourable opportunities of purchasing will prevail in the near future. It must be said, however, that prices are now reasonable, and many spinners of yarn and manufacturers of cloth are prepared to accept fresh contracts at figures which can only be described as unremunerative. This fact is realised by many merchants, but enterprise is being very severely checked by the tightness of money, and the difficulties experienced in securing financial accommodation. During the last few weeks numerous Manchester firms have had to defer the payment of accounts, and concerns that have never adopted such a method before have asked customers to accept three months' bills. A large amount of capital is locked up in stocks of goods which cannot be moved, and the stringency is certainly very pronounced. In consuming outlets abroad supplies of cotton fabrics are not heavy, and supplies will have to be replenished sooner or later, but it is feared that another big buying movement will not take place until there is greater stability in prices, especially in the raw material, and easier conditions in the money market.

Business Notes.

Agricultural Prices.—The Ministry of Agriculture has just issued Part III., Vol. LIV., of Agricultural Statistics, 1919 (Cmd. 902, 1920, price 6d), and the following table, compiled therefrom, gives the percentage increases in the prices of (a) farm produce and (b) farm requisites up to the end of 1919, the average of the years 1911-13 being taken as 100. (See also Journal of Ministry of Agriculture, October, 1920, pp. 607-9.)

(a) Farm Produce—	1914.	1919.
Cattle	106	232
Milk	103	300
Sheep	113	230
Pigs	106	276
Wheat	107	223
Wool	109	308
Butter	101	215
Oats	105	264
Cheese	104	269
Beans and peas	108	319
Vegetables	108	257
Hay	77	257
Barley	96	267
Potatoes	85	235
Poultry and eggs	98	259
Fruit	116	318
Hops	46	213

(b) Farm requisites—	1914.	1919.
Milling offals	103	230
Barley meal / Maize meal	105	291
Oilcakes	95	286
Maize	102	247
Brewers' grains	91	273
Ammonium sulphate	87	118
Sodium nitrate	96	214
Basic slag	100	210
Superphosphate	103	265
Wages	100	240

Measured by average index numbers, the progression from 1914 to 1919 in farm produce was 1, 27, 60, 101, 132, 158; and the average percentage increases in requisites were: feeding stuffs, 184; fertilisers, 121; seeds, 140; machinery and implements, 94; wages, 130-140.

Iron and Steel Production.—The following figures of output of pig-iron and steel for September and the previous eight months of 1920 and 1919 are issued by the National Federation of Iron and Steel Manufacturers: —

	Pig-iron.		Steel Ingots and Castings.	
	1919.	1920.	1919.	1920.
	Tons.	Tons.	Tons.	Tons.
First six months	3,954,000	4,145,000	4,264,000	4,877,000
July	641,000	750,600	618,000	789,900
August	521,000	752,400	474,000	709,200
September	581,000	741,000	718,000	883,900

The average daily rate for pig-iron in September last was 24,700 tons, as compared with 752,400 tons in August and 750,600 in July. The production of steel in June was 845,000 tons. Included in the production of 741,000 tons of pig-iron are 278,100 tons of hematite, 251,000 tons of basic, 132,000 tons of foundry, and 48,300 tons of forge iron.

Direct U.S. Cable Company.—A circular issued by this company reports that no agreement has been reached with the Western Union Company, the ultimate proposals of the latter being "of such a nature as to preclude the board from recommending their consideration by shareholders." The circular continues :—"An offer has, however, been received from his Majesty's Government for the purchase of the company's cable as laid, its properties, equipment, and stock cable, which offer can be inspected at the company's office during business hours." This offer will be submitted to the shareholders at a general meeting on October 19th, and the directors recommend its acceptance. They estimate that the offer "will, after discharging the company's liabilities, permit of a payment being eventually made of £6 per share. The board believe that the income to be derived from existing securities and the interest on the purchase consideration to be received from the Government will permit of the payment of a dividend of about 4 per cent. per annum until the company is finally dissolved."

Timber Prices.—A sectional committee appointed by the Standing Committees on the Investigation of Prices and on Trusts has produced a report on timber, of which the most noteworthy feature is the following finding :—"We are of opinion that the action of the Timber Supplies Department, in reversing their considered policy to sell at cost at the end of control by disposing of a quantity of surplus timber at the highest price obtainable acted as an incentive to the shippers and merchants to increase their charges. Timber selling at the enhanced prices in this country had considerable effect upon Swedish shippers, causing them to increase their f.o.b. price, and made comparatively easy the formation of a combination for the maintenance of high prices. We are of the opinion that to the sale of timber by the Department at these high prices the enhanced price of timber at the present time can largely be attributed." However, the Standing Com-

mittees dissociate themselves from this condemnation by the Sectional Committee, and consider that "adequate justification is given by the Controller of the Timber Supplies Department of his action in charging the market price for the sale of Government stocks of timber after control had terminated."

The Prudential's Marine Department.—The Prudential Assurance Company, which has already shown signs of an intention to become a composite insurance office, proposes to begin marine business on the first day of the New Year. An arrangement has been provisionally made under which the Royal Exchange Assurance Company will write risks in the Prudential's name. This is the new method, adopted not long ago by the London Guarantee and Accident Company, of developing a marine department under the auspices of an old experienced office. It is a method much less expensive and risky than setting up an office, underwriter, and staff of one's own, and less disturbing to a market which is already faced with more competition that at any time in its history. The originally popular plan adopted by big fire and life offices of buying up existing marine companies has practically come to an end through lack of marine companies to buy up; the supply has been almost exhausted. The Prudential has great financial resources, its marine business will be in very experienced hands, and if it is content to have a comparatively modest account written for it, the new venture should not turn out badly. The directors of the Prudential—who are beginning to look to fire, accident, and marine business as sources of future profits—are shrewd enough to perceive that industrial life business is not what it was in the spacious days of the Prudential's youth. There are too many critics about, and restrictive legislation looms in the offing. The day of the purely specialist office has nearly ended.

Clerical, Medical, and General Life Office.—Though the shares—or, at least, 96 per cent. of them—in this old life office, have been purchased by the Employers' Liability Assurance Corporation, the Clerical Medical and General will not be lost to sight. The old name and the old independent existence will remain in all essentials unchanged. The accounts can always be made up to June 30th in each year, and the report for 1919-20 has just appeared in ordinary course as if nothing had happened. For most life offices, and especially for those which are established on the firmest basis, new business has been plentiful! Never in life assurance history has there been such a demand for life assurance protection, and the Clerical, Medical, and General has again issued more new life policies than ever before. The number in 1919-20 was 2,089, assuring £1,791,996 gross, and £1,650,996 net. The net premium income increased by £45,953 to £542,650, and the gross interest income by £12,057 to £317,271. After deducting income-tax the funds yielded £3 16s 7d per cent., against £3 15s 2d per cent. in the previous year. Claims were very light, no less than £71,072 below the amount for 1918-19. Expenses have inevitably gone up. A considerable change has been made in the investments. More than two million pounds' worth of long-dated securities have been sold and the proceeds invested in short-dated securities, chiefly National War bonds and Treasury bills. The previous practice in abeyance since 1916 of re-valuing the assets each year has been reverted to. It appears from the certified accounts that the life fund on June 30th last, after providing £160,067 for losses on balance on securities realised, and £207,471 for depreciation, amounted in value to £6,439,750. A full actuarial valuation has been made up to June 30th, in anticipation of the quinquennial valuation, which is due next year, and the directors report that if the profits of the current year reach the average standard, "the bonus prospects for 1921 give promise that the pre-war standard may be maintained." This will be good news for with-profit policyholders in these hard times, for the directors would scarcely have committed themselves as far as this had they not been practically sure of this bonus. The chairman of the society, at the annual meeting yesterday, explained the changes in the financial position which the war had brought about. He was sanguine that the bonuses to with-profit policyholders would be maintained, and he made it quite clear that the valuation basis of non-profit and annuity business was going to be changed. There was no intention to disturb the 2½ per cent. basis—of which some 30 years ago the society was a pioneer—for with-profit policies, but seeing that the society was getting some 4½ per cent. net on its new investments, and not much less than 4 per cent. on its securities taken all over, the fixed contracts (non-profit policies and annuities) could safely be valued at 3 per cent. He pointed out that the losses on investments realised and depreciation, to which we refer above, had already cut severely into the 2½ per cent. reserves on fixed contracts, and that the basis could not be restored except at the expense of the with-profit policyholders. Mr Francis Smith's speech is of much interest; it shows clearly what life-assurance managers are now thinking of, and how the new conditions are likely to affect traditional policy. Within the last few months the Clerical, Medical, and General has made some striking changes, and others are indicated. The premium rates for new entrants have been raised to meet the upward movement in expenses; a large mass of long-dated securities has been sold at a considerable sacrifice and the proceeds invested in Treasury bills and War Bonds, maturing at a premium in 1922 and 1923; the depreciation since 1916 has been provided for, and the valuation basis for fixed contracts is to be reconsidered. War claims have at last ceased, business is exceedingly active in spite of the increase in premium rates, and the net rates of interest on new money—of which a great deal will become available from the maturity of bills and short-dated notes—is steadily going up. In all ways the society affords evidence that it is wide awake and very much up to date.

HARRISONS & CROSFIELD, LTD.,

London, Colombo, Calcutta, Bandoeng, Quilon, Kuala Lumpur, Kobe, Calicut, Medan, Montreal, Cochin, Batavia, Tangier.

Calico Printers' Wages.—At the beginning of this week a long conference took place in Manchester between the employers in the calico printing, bleaching, dyeing, and finishing industries and trade union officials for the purpose of considering an application from the operatives for an advance of 40 per cent. on current rates of wages and a minimum of 25 per cent. over day rates for piece workers. The application affects about 80,000 operatives, chiefly in Lancashire, Yorkshire, and Cheshire. After some discussion the trade union representatives suggested that the question should be decided by an arbitration court, consisting of one representative appointed by the employers and one appointed by the workpeople, with power to appoint an umpire if they could not agree. The employers refused this form of arbitration, and offered arbitration under the Industrial Courts Act, 1919, which provides that the employers and the trade unions should each select a representative, but the chairman be appointed by the Ministry of Labour. The two sides failed to agree, and the conference broke up without any decision being reached. It is understood that the trade unions are now considering whether they should issue strike notices to enforce their claim.

Export Credits.—The Department of Overseas Trade has issued a return of credits granted under the Overseas Trade (Credits and Insurance) Act, 1920, during the three months July, August and September, 1920. The credits granted (actual payments made) amounted to £27,395 4s 11d in respect of Roumania and Czecho-Slovakia. During the same period applications were sanctioned amounting to £68,773 15s 6d.

The Southern Slav Kingdom.—A correspondent writes Jugo-Slavia still awaits its Constitution and the establishment of a regularly elected Parliament for the whole kingdom; but the Budget speech of M. Stoyanovich, the Finance Minister in M. Vesnich's Cabinet, which took office last May, exhibits the financial difficulties of the new State and the way out of them. (Extracts from a French version appeared in the *Journal de Genève* of Monday last.) The expenditure proposed seems enormous. The Departments of State asked for six milliards of dinars; the sum was drastically reduced to 3,994,356,543 dinars, of which some 803 million is "extraordinary"; but the Minister states that the fall in the purchasing power of the dinar makes the sum equivalent, at pre-war rates, to one milliard and a-half. The revenue is estimated at 3,884,177,798 dinars, of which some 1,022 million comes from the country as a whole—chiefly from Customs, Excise, and the tax on business turnover—and more than 2,861 million from various localities, mainly from taxes levied under their existing laws, and presumably dating from the pre-war era. No mention seems to be made of the Serbian war debt, exceeding £40 millions, or the pre-war debt of more than £14 millions, of which the interest is regularly paid, or the share of the Turkish Debt to be assumed in respect of Macedonia. But M. Stoyanovich points out that the population is nearly 14 millions, the territory 250 million square kilometres (94,500 square miles), the cultivable land 5 million hectares (over 12¼ million acres), that various manufacturing industries are established, and may legitimately be encouraged by the State, and that the raw material is mostly available within the kingdom. Independent evidence confirms these hopeful predictions. Their fulfilment, however, depends largely on Jugo-Slav relations with Italy, Bulgaria, and Greece. Bulgaria, at any rate, is now decidedly pacifist, and is drawn to Jugo-Slavia more especially by their joint need of an outlet through Greece to the Ægean Sea.

British Capital in Czecho-Slovakia.—A correspondent calls our attention to a circular issued by a bank in Prague, from which it would appear that any British subject who has money in banks, or private persons in Prague before the war, will now be liable to a tax on his capital in Czecho-Slovakia. The tax, it seems, will vary from 20 per cent. to 60 per cent., a sufficiently severe toll under such circumstances, especially as up to the present some at least of the banks in Czecho-Slovakia have not, when requested, returned money lent to them by this country in sterling.

Harrisons and Crosfield.—The report of Harrisons and Crosfield, Limited, the well-known merchants and promoters of tea and rubber plantation companies, for the year ended June 30th last gives little information with respect to the year's operations beyond stating that "the business has been well maintained during the year." The chairman, however, will doubtless make good the deficiency at the meeting on Thursday next. The net profit, after making provision for all taxation and depreciation, amounted to £249,200, an increase of nearly £49,000 as compared with the previous year. How profits have grown since 1913-14 may be seen from the following comparative summary :—

	1913-14.	1914-15.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.
	£	£	£	£	£	£	£
Net profit	134,269	152,303	154,251	187,181	212,190	200,571	249,204
Brought forward	23,879	33,530	42,345	42,290	37,340	37,530	36,147
	158,148	187,833	196 596	229,471	249,530	238,101	285,351
Preference dividend	27,500	27,500	32,035	39.875	33,000	36,165	37,230
Pref. ord. div. (10 %)	30,000	30,000	30,000	30,000	30,000	37,500	80,000
Management shares	30,000	37,500	37,500	52,500	60,000	37 177	45,344
Reserves, &c.	35,118	50,488	54,771	69,756	74,000	41,024	24,922
Deferred ord. shares	..	..	..	..	15,000	50,088	59,982
Carried forward	35,530	42,345	42,290	37,340	37,530	36,147	37,873

The preferred ordinary capital was increased by £504,500 during the year, and this accounts for the larger sum required to meet the 10 per cent. dividend. The reserve allocation includes a transfer of £13,922 to general reserve and a payment of £11,000 to staff by way of bonus. The dividend on management shares is paid on a capital of £25,000, while the deferred ordinary shares stand in the balance-sheet at £182,966. Changes in the balance-sheet, which is analysed in the usual column, include increases of £215,100 in depositors, of £281,400 in acceptances, and of £141,600 in creditors. Bank overdrafts have been reduced by £101,300 to £234,000. Freehold and leasehold property is £399,400 higher at £934,800, and debtors have risen by £311,800. Investments, at cost or under, stand at £1,267,700, or £219,600 higher, but it is stated that the market value "continues to show a large appreciation over their cost."

Transvaal Output for September. — The September statistics of gold output in the Transvaal show that the total production of fine gold during the month amounted to 682,173 ounces as compared with 702,083 ounces in August and 698,558 ounces for September, 1919. The following table shows the production for a number of years past :—

	1916.	1917.	1918.	1919.	1920.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January	787,467	782,634	714,182	676,059	670,503

De Keyser's Hotel.—Sir Arthur Whinney, who was appointed receiver and manager by the Court on behalf of the debenture-holders of De Keyser's Royal Hotel, Limited, on June 25, 1915, has issued a report to the preference shareholders of the company reviewing the circumstances which have led up to the return to them of 20s in the £. On May 8, 1916, the premises were requisitioned by the Government, who refused to pay compensation otherwise than *ex gratia*. Litigation was entered into in 1916 to compel the Government to pay a fair rent, and after much delay the matter came before the Court on March 22, 1918, when judgment was given against the company. The Appeal Court, however, reversed this decision on April 9, 1919, and its judgment was upheld by the House of Lords on February 2, 1920. The cost of three and a-half years of litigation cost the company £20,000. In the meantime the Government had handed back the premises and had paid £20,000 generally on account of dilapidations. Before any schemes of necessary reconstruction could be completed an offer of £350,000 for the premises was received and accepted, the purchaser taking over all claims against the Government, including the claim for occupation rent. In August last the company passed into voluntary liquidation, and creditors whose claims are admitted are being paid in full, and preference shareholders are receiving a return of £1 per share, being the full amount of their capital subscribed. A question has been raised as to whether the preference shareholders are entitled to arrears of dividend in priority to any return being made to the ordinary shareholders. Counsel's advice has been taken, and is to the effect that the preference shareholders are not so entitled, but the directions of the Court will be taken. Every endeavour is to be made to dispose of the matter before the end of the year.

THE FULL range of import and export trading operations is covered by the Irving's specialized Over-seas service departments. These include Foreign Trade, with its counsel on markets and other buying and selling problems, Foreign Exchange, Credits, Collections, Securities and Commercial—the latter co-operating with the over-seas merchant or manufacturer in any situation which demands special attention to the entry, warehousing, insurance, delivery or the final settlement for his merchandise.

UNITED STATES.—INDUSTRY AND PRICE REDUCTIONS — BRISK INVESTMENT DEMAND FOR BONDS.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 1.

A GREAT deal of confusion and hesitancy prevails in trade and industry at present, owing to extensive price reductions by manufacturers, wholesalers, and some retailers, and to uncertainty regarding the future course of prices that have not yet been lowered. Business conditions generally, therefore, are very irregular and unsettled, although buying to supply actual necessities of more than 100,000,000 people is a stabilising factor. The downward price tendency, which has become so pronounced in the past week or two, is not at all surprising to those familiar with economic developments here in recent months. Many manufacturers and distributors thought that the earlier price cuts and curtailment of production would stimulate demand, create a scarcity of merchandise, and stiffen prices in the autumn. But their calculations were completely upset. The public persistently refused to buy, except for immediate needs, at going prices. Cancellations of orders rapidly multiplied, and stocks, instead of decreasing actually accumulated. What is now happening is that merchants and producers are trying to discover, through price concessions, the level at which consumers will operate. The present movement was precipitated by the cut of 17 per cent. to more than 25 per cent. in prices of Ford automobiles and motor-trucks to a pre-war basis, the 33⅓ per cent. reduction in cotton goods by the Amoskeag Manufacturing Company, and concessions of 10 per cent. to 45 per cent. by two leading mail order houses—Sears, Roebuck and Co. and Montgomery, Ward and Co. This week about a dozen automobile manufacturers announced reductions ranging from $125 to $500, and affecting some of the most popular cars, such as Franklin, Studebaker, Hudson, Willys-Overland, Paige Detroit, Chandler, Maxwell, Chalmers, and Essex. Several producers, however, have signified their intention of maintaining prices, the list including Packard, Dodge, Dort, Reo, Saxon, Apperson, Knight, Peerless, and the entire General Motors group, embracing Cadillac, Buick, Chevrolet, Oakland, Oldsmobile, and Scripps-Booth car. At least one tyre company is advertising a cut of 15 per cent. in its products, effective immediately. Other reductions cover a wide range of merchandise and materials, among the more important being pig-iron, steel billets, plates and sheets, and lumber. In their efforts to liquidate high-priced inventories, some manufacturers and distributers are taking the attitude that immediate and drastic cuts are the best method of getting back to normal conditions, even though heavy losses have to be sustained; many others, however, will doubtless make gradual reductions, and this means a period of price reactions and uncertainty, the length of which will depend upon the attitude of consumers.

On the Stock Exchange, industrials declined sharply this week as a result of price-cutting and unsettlement in the business world, shares of more than 50 different corporations falling to new low records for this year, while railroads continued their advance, and in many cases reached new high levels for the year. One of the most noteworthy and encouraging features in securities markets is the increasing activity and strength displayed by bonds. Investment demand has reached larger proportions than at any time since the armistice was signed, and embraces both old and new foreign and domestic issues, especially those affording attractive yields. The latest offerings included the $20,000,000 Kingdom of Norway 8 per cent. bonds at par and interest, and the $25,000,000 7 per cent. bonds of the Bell Telephone Company of Pennsylvania at 95 and interest, both of which were sold within a few hours after subscription lists were opened. Additional European and domestic offerings are expected to be made shortly.

FRANCE.—BUDGET—THE CONTROL OF PRICES—CONSUMERS' COUNCILS—TAX REVENUE—BOURSE

(FROM OUR CORRESPONDENT.)

PARIS, October 12.

WHILE the amount that will be received from the German indemnity has yet to be fixed, the Finance Minister (M. François-Marsal) is already making excellent progress with the Budget for 1921. Practically the whole of the Departmental Estimates were ready several weeks in advance of last year, and they are now under consideration by the Finance Commission of the Chamber. A striking new departure was initiated last week in this connection, when the Finance Minister went to the Elysée and submitted the Estimates for the personal consideration of the President of the Republic (M. Millerand) who is stated to have gone carefully into the figures and made a large number of suggestions for possible economies. M. François-Marsal proposes, it is understood, again to make use this year of the "Economies Committee," which did such useful work a year ago by drawing up suggestions for "pruning," that were subsequently considered by the Budget Commissions of the two Houses. The Finance Commission of the Chamber began its sittings yesterday for the discussion of the new Estimates.

This year, for the first time since the war began, the

"Extraordinary Budget," which has hitherto figured alongside the ordinary one, has been suppressed. The Budget for 1921 will comprise only two parts—first, the ordinary Budget, and, secondly, figures showing the amounts to be recovered from Germany and her allies under the various treaties of peace. The first figures issued indicate that the new Budget will amount to 26,000,000,000f, or four milliards in excess of that of 1920. One-half of this increase is due to additional money asked for by the War Department, whose demands may very probably be largely reduced before the Bill passes. The policy adopted by the Finance Minister is to endeavour to balance the national accounts by means of taxation alone. Two factors on which he is understood to place a great deal of importance are the revenue that will be derived from the taxation of war profits (estimated to produce 4,000,000,000f during the coming year), and the yield from the new tax on turnover *taxe sur le chiffre d'affaires*), from which he hopes next year to obtain a yield of 5,000,000,000f.

Another determined effort to bring down the high cost of necessaries has been resolved upon by the Government, but whether this will produce any more practical results than the many previous attempts that have been made during the past two years remains to be seen. The whole question was discussed to-day at length at a sitting of the Ministerial Council that was specially devoted to the subject. In the result, directions were given for the rigorous enforcement of the present laws compelling every tradesman to post up his sale prices, for the punishment of illicit speculation, and of the law enacting that public notification of convictions shall be affixed to the doors of the guilty persons' premises (which has latterly fallen into abeyance). Decrees were approved regulating the sale of cattle on the hoof and of fresh meat in the markets, and it was decided that the law of October, 1915, prohibiting the slaughter of calves, &c., should be strictly enforced. Steps for encouraging the greater use of frozen meat were considered, and it was decided to promulgate a decree fixing the price of this form of food and regulating the working of cold storage depots at the ports. Another important question dealt with was the encouragement of the use of fish as a substitute for meat, and a programme was considered for intensifying the supply, transport, and distribution of this form of nourishment. It was also decided to prohibit the export of milk, butter, eggs, cheese, and potatoes. Proposals to restrict the consumption of meat by the re-institution of meatless days, meat cards, &c., were rejected in view of the fact that experience has shown that measures of this kind immediately resulted in a substantial rise in the price of fish, fruit, and all other substitutes.

With a view to making the campaign against the high cost of living a really national movement, the Government proposes to institute consumers' councils in every department, and possibly in every large centre, with a "Superior Council of Consumers" at Paris. These councils, it is proposed, shall consist of consumers, representatives of co-operative organisations, traders and ex-soldiers, whose function it will be to discuss and pass on to the authorities suggestions as to the best methods for the elimination of middlemen, to track down profiteers, and prosecute offenders against the food laws. One serious cause of high prices at present is the fact that private speculators have for months past made a practice of scouring the country, many miles from Paris, in their own motor-cars, buying up all the available eggs, butter, &c., at no matter what price they are asked, and transporting them forthwith to Paris, for sale at still higher prices. A newspaper suggestion is that this practice shall be met by a law prohibiting the transport of such commodities by motor-car, under heavy penalties.

The official figures showing the yield from the new taxes for September have been a cause of considerable surprise so far as the revenue from the tax on turnover is concerned. As I stated last week, reports emanating from the Ministry of Finance, and unofficially published in the newspapers, have led the public to believe that the new tax was proving a stupendous success. As a matter of fact, the contrary has so far been the case, as the official figures now show. The yield from the turnover tax for September was 292,791,500f, compared with a Budget estimate for the month of 700,000,000f. The official explanation is that on the one hand taxpayers have not yet become accustomed to the new form of impost, and that, on the other, the Government machinery for collecting it is still far from complete. The effect of this unexpected development is that the revenue for the month shows a deficit of 321,800,100f, as compared with the estimates, the actual yield having been 1,119,642,700f, as against an estimated 1,441,442,800f. On the other hand, if the disappointing yield from the turnover tax be left out of the account, the revenue for the month shows an increase of 12 per cent. over the estimates. Stamps, indeed, produced no less than 43 per cent. above the estimated yield, and 23 per cent. over the amount recorded for September last year. The increase is due partly to the new stamp duties imposed since the current year began, and partly to the general increase of business done.

The general tendency towards depression has been greatly accentuated during the week. This is due partly to the preparations made in view of the loan, but above all to the difficulties existing in Paris, such as the motor-car industry, naval construction, the mining industry and so forth. All industrial concerns here are suffering more or less acutely from the rise in the price of raw materials of all sorts, and though there are certain trades where satisfactory conditions still exist, the tendency has been generally to act in sympathy with the common depression. French funds have shown a trifling rise, but banks are down. The Banque de l'Algérie stands at 3,880, as against 4,000, Union Parisienne fluctuating between 1,105 and 1,135, as against 1,170. Railways have shown few changes, the market having been a trifle neglected. Messageries have fallen back from 380 to 340, and Chargeurs Réunis are at between 1,055 and 1,075 as against 1,100. Electrical undertakings are in a state of suspended animation, Thomson falling from 1,050 to between 950 and 975. There is a general fall in all metallurgical shares, as can be seen from the following quotations:—Aciéries de France are back from 886 to 860, Longwy from 1,795 to 1,625, Saint-Nazaire from 1,300 to 1,200, Creusot from 3,100 to 2,955, and Gnome from 1,080 to 960. Mines are heavy, Tintos having dropped from 1,550 to 1,515, Boléo from 890 to 850, and Utah from 935 to 920. Unfortunately, the general view is that one must expect a still further decline in values.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows:—

GERMANY.—SOCIALISATION—NEW LAWS—FINANCES—REICHSBANK—EXCHANGE AND BOURSE—COAL.

(FROM OUR CORRESPONDENT.)

BERLIN, October 9.

As the result of a wage conflict, Berlin has been for a week almost without newspapers. There are other signs of new Labour unrest. The very cautious reports of the Socialisation Commission on the coal question have caused much anger in extreme Left quarters. The first Congress of Factory Councils this week declared by a very large majority that the two years' attempt to restore production on capitalistic lines has failed, and that Socialisation must at last be taken in hand. The attitude of the moderate Majority-Socialists towards this question is undergoing a change. The Socialisation Commission, which for two years obdurately refused to nationalise anything, and which has now refused to terminate immediately private ownership of coal mines, even in the alternative form of transfer of ownership rights to a publicly controlled corporation independent of the State, is itself mainly composed of Socialists, and contains a fair proportion of the radically minded Independent-Socialists, led by Herr Kautsky. The first three post-Revolution Cabinets, all under Majority-Socialist leadership, approved of this very cautious policy. To-day, being in a position of greater freedom and less responsibility, these Socialists are attacking the Fehrenbach Cabinet for, though anti-Socialist, refusing to do what they as Socialists themselves hesitated to do; and there are rumours of a Majority-Socialist deal with the Independents to overthrow Herr Fehrenbach. The Cabinet has twice announced that it intends to submit a Coal Socialisation Law; but it adds that it will not follow either of the Commission reports, and will pursue a policy of its own. The immediate abolition of private ownership is not likely to be a feature of this policy.

A Bill providing for Federal Unemployment Insurance is ready. The insurable, in addition to manual workers, include salaried employees in industrial concerns, apothecaries' assistants, theatrical artists, musicians and workers, sailors, State and municipal employees, and school teachers. The unemployment allowance is the full local wage, but it will not be paid for more than 13 weeks within one year. The insured must pay 26 weekly premiums in the last two years before acquiring a right to draw the allowance. No person can be refused the allowance on the ground that he has refused to accept a position made vacant by a strike or lock-out. The insurance funds, to be administered by the local unions of Six Insurance Bureaux, will be fed by equal weekly premiums from employees and employers, and by Federal and Municipal subsidies each equalling a quarter of the amount received from premiums. A new Bill restricting the transfer of capital abroad has been passed by the Reichsrat, and is now before the Reichstag. The old law expired on October 1st, which date was fixed on the assumption that the assessments for the emergency levy and the property increment tax by then would be completed. The assessments are far from ready. The Bill maintains the regulation that money may be transferred abroad only through bankers. The sum which may be directly sent in a single transfer has been raised from 1,000 to 3,000m, and the limit for travellers has been raised. Transfers in foreign currency are to be calculated at the day's exchange. The Government has sent to the Reichswirtschaftsrat a Bill restricting the right to stop work in industrial concerns, or to disperse plant. Manufacturers with such intentions are obliged to report, and to delay action respectively four and six weeks, and during the respite experts will decide whether the intended measures are justified. No general prohibition against the complete closing of factories is intended; owing to the coal shortage many stoppages of work, by concentrating the limited supply of raw materials in the more economically conducted factories, have a good effect.

ESTABLISHED 1810

THE MECHANICS & METALS NATIONAL BANK

OF THE CITY OF NEW YORK

Capital (fully paid), Surplus and undivided Profits

$25,000,000

This Bank finances exports and imports, buys and sells foreign exchange, cable transfers, etc., and makes collections on all parts of the world.

LONDON CORRESPONDENTS:

London Joint City and Midland Bank, Ltd.
London County, Westminster and Parrs Bank, Ltd.
Barclays Bank, Ltd.

The Ministry of Finance this week communicated to the Reichsrat a new estimate of the deficit in the current financial year. The new estimate, including 18 milliards of loss on the Federal railways and posts, is 67 milliards. The Ministry's representative hinted that perhaps the emergency levy would not be worth while collecting. When planned a year ago this tax, estimated to yield 50 milliards, was intended to extinguish a considerable part of the debt; to-day it will not cover the deficit of one year. The Ministry reported that the current year's roll of officials contains 24,852 new posts; declared that "a tempest of law-making" is the cause, and expressed the view that Germany is suffering from over-organisation. The Reichsrat passed a resolution demanding a sharp reduction of expenditure, and complaining of the cost of the Army of Occupation. The plan to increase the authority of the Minister of Finance, so that effective opposition may be made to the departmental policy of multiplying officials and raising salaries, has been approved of. The details are not yet published, but one feature is the appointment of a Federal Finance Commissioner, subject to the Finance Ministry, who will be entrusted with restrictive powers.

The Reichsbank report for the last week of September shows further heavy demands on the bank, and fresh currency inflation on a great scale. During the week the note circulation increased by 2,471,800,000m to 61,735,500,000; and the Kassenschein circulation by 355,800,000 to 13,347,700,000m. The total circulation is now about 75 milliards, as against 41½ milliards at close of September, 1919. The effect of this inflation is shown in all bank entries; the holding of bills has during the last year increased by 21,136 million marks; since the beginning of 1920 by 13,251 million marks. The relative positions of the bank at close of the half-year preceding the outbreak of war and on September 30th present striking contrasts:—

(Millions of Marks.)

	Gold.	Reichs and Darlehenkassenscheine.	Bills.	Note Circulation.	Deposits.	Note Cover, %. Leg'l.	Met'l.	Gold.
June 30, 1914 ..	2,093	50	1,213	2,407	858	69·8	67·8	54·[illegible]
Sept. 30. 1920 ..	1,092	19,861	54,996	61,735	20,054	31·0	1·8	1·8

Reports of the Savings Banks show a decline in the rate of increase of deposits, the increase in August being only 400,000,000m, as against 1,200,000,000m in July, and 1,600,000,000m, the highest month's increase yet recorded, in June. The decrease is ascribed to greater trade activity, and in particular to the speculation which began with the new drop in mark exchange. With the exception of January and February this year, every month since the beginning of 1918 has seen an increase in savings deposits. The total increase in all 1918 was 4,750,000,000m; in 1919, 4,900,000,000m; and in eight months of this year, 4,940,000,000m. The industrial capital market in September showed an increase of activity. A banker's estimate puts the total of capital raised for ordinary shares

and stocks at 443 millions as against 363 millions in August, and for debentures 374 millions against 47 millions in August. Preferred issues dropped from 264 millions to only 13 millions. The capital market during the quarter now finished has been less active than during the preceding quarter, the total of industrial issues being 2,110,000,000m, against 2,768,000,000m.

Although the rise in the foreign exchanges has for the moment ceased, the stock market continues firm, and extraordinarily active. So active that the Berlin Bourse has had to revert to the policy of last winter of closing on certain days every week in order that brokers and the banks may make up arrears of work. The continued boom is due partly to the issue of very favourable company reports for the past business year, the cause of which prosperity was the great price-rise of last winter. Instances are: the combined Koenigshuette and Laurahuette (metallurgical, Silesia), which reports gross profits of 60,000,000m, against a gross loss of 6,491,000m in 1918-19, and declares a dividend of 20 per cent. against nothing; the Phœnix Mining and Smelting Co., which reports gross profits of 68,993,839m, against 12,780,162m last year; and pays 20 per cent., against 8 per cent.; the Hasper Iron and Steel Company, which reports gross profits 14,921,668m, against 6,169,793m, and pays 20 per cent., against 10 per cent.; and the Vereinigte Steel Works van de Zypen, which reports gross profits 20,622,171m, against 1,600,000m, and pays 30 per cent., against 10. Some chemical and paper companies report 400-500 per cent. increase in profits. A factor further fostering bull speculation is the continuation of industrial fusions, from which greater economy is expected. The Phœnix Company has passed partly under Dutch control. The control of the Bochumer Verein Company has been acquired by a bank syndicate for the lately-fused Gelsenkirchner and Deutsch-Luxemburg companies, the greatest Stinnes concern. Four other Stinnes fusions are reported as under way, and Herr Stinnes is declared to aim at attaching the greatest motor-car companies to the Gelsenkirchen concern. The last report of Bourse averages, for October 2nd, shows a slight decline as against averages of September 25th, but the movement since then has been on the whole upward. On the 5th, as result of the good company reports, the stocks of engineering, potash, and some electro-technical companies rose violently; and the Silesian mining and metal papers reached record prices. Many orders could not be executed owing to Bourse congestion. The direct Franco-German negotiations concerning reparation had a good effect.

The prospects of the big iron companies are not as certain as the Bourse boom implies. The need for securing orders for the winter has compelled price reductions in export business; and the unfavourable movement in mark exchange, upon which ultimately the whole boom is based, may at any moment be reversed. The official prices fixed six weeks back for pig-iron and for semi-finished and heavy finished steel products come to an end on November 1st; and it is not known whether the Eisenwirtschaftsbund, which will meet in a few days to decide the question, will raise or lower them. Production costs are not falling; and demands for higher wages are being made.

The coal shortage is being increasingly felt. The Ruhr production in September was satisfactory, being 291,940 tons a day, against 280,448 tons in August. The Westphalian iron and steel companies are importing American coal at about 2,000m a ton; but only those companies which have secured large export orders at full world-prices can afford this price. The effect of the Spa Agreement upon the home coal supply in August was a reduction of rations as compared with July by the following amounts:—

	Tons.
Industry proper	312,300
Electrical stations	43,600
Gas works	107,400
Private railways	2,600
State railways	318,100
Domestic (estimated)	100,000
Total	884,000

The steelworks are getting 12 to 15 per cent. less than in May, and have been obliged to shorten production; the copper smelting works, which use gas flame-coal, are getting 46 per cent. less, the Siegerland iron mines 30 per cent. less, and the potash industry 40 per cent. less. Owing to shortage of coal for dredging, the Kiel Canal, says an official report, is silting up. During the whole war vessels drawing 11 metres used the canal; to-day vessels drawing 8 metres cannot get through.

ITALY.—FOREIGN EXCHANGES AND FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

TURIN, October 8.

AT the time of writing foreign exchanges are soaring up, so that they have already reached the highest monthly average hitherto touched. I give below, for the sake of comparison, a statement of the said monthly averages, as calculated in the preface to a new French edition of the well-known study by Mr Stringher, director-general of the Bank of Italy, on "Note Issues and Money Market in Italy":—

	Switzerland.	Paris.	London.	New York.
1914, July	100.76	100.93	25.31	5.17
„ December	101.60	103.31	25.88	5.30
1915, „	123.56	112.23	30.97	6.57
1916, „	135.18	117.20	32.50	6.85
1917, „	189.90	144.87	39.56	8.29
1918, „	130.00	116.25	30.37	6.34
1919, „	241.67	121.92	50.08	13.07
1920, January	251.34	120.51	51.60	13.99
„ February	296.14	128.89	61.71	18.21
„ March	321.24	136.21	70.55	19.03
„ April	410.46	142.40	90.42	22.94
„ May	351.59	133.65	76.99	19.76
„ June	308.98	133.64	67.14	16.89
„ July	305.50	141.12	67.30	18.17
„ October 2	387.50	161.50	84.15	24.25
„ October 7	400.00	170.00	89.00	25.00

As the highest level was touched in April, 1920, it is easily seen that October threatens to break all records. Speculations are rife as to the causes of the great rise; and in banking and trade circles it is said that the political occurrences, mainly the fear that the last dispute in the iron and steel industry, with the forced surrender of employers, will be only the first of a series of bitter disputes, which may end in the overthrow of the present industrial system. It is also said that foreign banks and trading firms are reducing or closing credits opened to Italian customers; so that it is increasingly difficult for our industry to pay debts which are falling due, and it will be increasingly difficult to obtain new credits for purchasing coal, wool, cotton, iron, and other raw materials of industry.

Time alone will show if these fears are justified, or if the good sense of the Italian people will not prevail. The latest available figures of foreign trade are those for the first six months of 1920, and they compare favourably with previous periods—

(In Millions of Lire.)

	Imports.	Exports.	Excess of Imports Over Exports.
1918, first six months	7,907.2	1,931.9	5,975.3
„ second „	8,131.4	1,412.8	6,718.6
1919, first „	8,841.7	1,796.0	7,045.7
„ second „	7,674.9	3,392.6	4,282.3
1920, first „	8,413.8	3,889.6	4,524.2

The figures are not exactly comparable, as those for 1918 and 1919 are at 1918 values, while those for 1920 are at 1919 values; but it is clear that imports are stationary, while exports are increasing. If we examine details of imports we see that the greatest decreases in the first half of 1920 against the same period in 1919 are in animals and animal products, from 1,329.1 to 554.3 millions lire (− 774.8), and minerals, metals, and metal products, from 1,335.5 to 1,015.9 millions lire (− 319.6). The first fact is reassuring, as it may be explained by the gradual increase of domestic animal stock, which during the war was greatly depleted. The second fact is perhaps attributable to decreased activity of war industries. Against these principal decreases we may note increases from 333.2 to 498.2 (+ 165.0) in olive and other edible oils and alcohols, from 352.5 to 593.4 (+ 240.9) in wool and woollens, from 51.4 to 168.8 (+ 117.4) in timber, from 153.2 to 249.3 (+ 96.1) in silk, from 713.7 to 785.6 (+ 71.9) in coal, earthenware, &c., from 461.0 to 521.2 (+ 60.2) in hides, from 44.8 to 101.9 (+ 57.1) in dyes and

colouring and tanning materials, from 70.6 to 108.0 (+ 37.4) in hemp, flax, jute, from 44.1 to 107.7 (+ 63.6) in cars, motor-cars, &c. Among the exports there are no decreases worthy of notice. The principal increases are as follows:—From 369.2 to 828.5 (+ 459.3) in silk; from 158.8 to 428.8 (+ 270) in hemp, flax, jute, and their worked products; from 324.7 to 503.0 (+ 178.3) in macaroni, vegetables, &c.; from 413.9 to 581.9 (+ 168) in cotton goods; from 85.4 to 227.9 (+ 142.5) in chemical products; from 12.7 to 141.0 (+ 128.3) in motor-cars and other vehicles; from 58.9 to 164.2 (+ 105.2) in metals and metal products. The increases in exports are general, and in some cases remarkable. If only we could have a year of continuous work, the balance of international commerce might return to a normal condition, and, so far as the depreciation, or, rather, the unstable value, of the lira depends on excess of imports over exports, the foreign exchanges would be stabilised.

POLAND. — THE LITHUANIAN QUESTION — NEW CAPITAL ISSUES—PAPER INFLATION.

(FROM OUR CORRESPONDENT.)

WARSAW, October 7.

POLAND and Lithuania have many common interests, especially as far as economic questions are concerned. To a certain degree they are complementary to each other. The credit institutions of the country are in Polish hands—for instance, the Vilna Land Bank and the Vilna Private Commercial Bank. The landlords are in the majority Poles. Though the Russian Government confiscated Polish property after the revolution of 1863, more than half of the surface of the great estates was before the war owned by Poles. In the Government of Vilna the proportion amounted to 60.3 per cent., and in the Government of Gradno to 43.1 per cent. Lithuania has a surplus of profits which Poland needs, such as timber, hides, flax, &c. The imports of Lithuania consist of articles which are produced by the Polish soil and industry, as, for instance, cotton goods, sugar, machines, pottery, oil, &c. Before the war Lithuania was one of the best Polish markets for these products.

The interdependence of the two countries goes further. Lithuania possesses great natural riches, but at the present moment a Lithuanian upper class, which could take the lead in industrial, agricultural and commercial activity, is only in process of formation. The *intelligentsia* is mostly Polish. It may be assumed as certain that the new Lithuanian State will be able to recover from the ravages it has suffered during the years of war and occupation only if it resorts to the help of the Polish landowners, engineers, &c., who are inhabiting its territory. The process of reconstruction will be difficult, because before the war the country had become, under the rule of bureaucracy, one of the most backward parts of Europe. Though its soil is fertile, it was not able to produce a quantity of food sufficient for its limited population.

For recovery from the blows of the war, Lithuania needs not only capital, but also economic leadership. In this respect she will be obliged to work together with her Polish population. So the two nations have many common interests, and it may be hoped that they will realise this, and that the actual friction will be soon replaced by co-operation and mutual aid in the rebuilding of Eastern Europe.

Statistics of capital issues have been published recently, showing a very rapid rise of new limited companies :—

	No. of New Limited Companies.	Capital Issued (000's omitted). Marks.
First quarter, 1919	6	42,750
Second „ „	15	80,900
Third „ „	30	191,870
Fourth „ „	19	80,825
Total, 1919.....	70	396,345
First quarter, 1920	44	306,810

The capital issued in the first quarter of 1920 is not much smaller than that issued during the whole previous year. This, however, is not a proof of an increase of economic activity, because prices have risen tenfold, and where a year ago 20 millions were necessary for an undertaking to-day 200 millions are hardly sufficient. More important is the fact that the number of limited companies has rapidly increased. While in the last quarter of 1919 only 19 new companies were created, in the first quarter of 1920 the number has risen to 44. Only a small part of the new capital was raised for manufacturing purposes. Of the 396 millions issued in 1919, 220 millions were invested in commercial enterprises. Eight new banks, with a capital of 69 millions, were created. The iron and machine industry absorbed only 53 millions, or about 13 per cent. of the total. This is a proof of the fact that the paper inflation has produced very unhealthy conditions. The continual rise of prices makes speculation so profitable that commerce, with its easy gains, is more attractive for capital than the hard work of industry. It may be expected that the end of the war will bring the beginning of a more normal state of things. A certain improvement is already noticeable. In September the amount of notes in circulation has increased only very slightly. At the end of August, 31.1 milliards of Polish marks were in circulation; on September 10th, 31.7; on September 20th, 32.1. In comparison with the increase in the previous months, which reached nearly five milliards monthly, the inflation in September has been relatively small.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised	£3,000 000
Paid Up Capital	1,050,000
Reserve Fund and Undivided Profits	1,146,430

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

SWEDEN.—COMMODITY PRICES FALLING—A BIG INDUSTRIAL FUSION.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, October 9.

ALTHOUGH the cost of living—judging from statistics—in Sweden seems to increase, the last figure being 181 per cent. above the pre-war level, or an increase of 4 per cent. above the figure for the last quarter, a slight reduction is noticeable in prices for wholesale commodities during September. The strongest setback is recorded for coals and coke. In this trade reckless speculation has taken place from the American side, with the result that we in this country have stocks of coal which may last us for six months. It is reported that American firms despatched consignments of coals to Swedish ports in the hope that they would fetch a good price on arrival, but the result was exactly the opposite, and American coals may now be bought at somewhere about 150 kr a ton, as against 170 to 180 a month earlier. Raw materials for the farming and textile industries also tumbled in price. On the other hand, foodstuffs have risen somewhat, which is always the case at this time of the year, when the summer is over. The effects of falling sea freights are now being felt in Sweden, notwithstanding the fact that most of the leading shipping concerns have consolidated themselves strongly during the war. The Rederiaktiebolaget Svensk Lloyd is reported to have cancelled several contracts placed with Swedish shipyards, which latter have consequently restricted working and dismissed part of their staff. This is a feature which is also noticeable in the iron and textile industries, which are greatly hit by the depression. Recently the Swedish wool manufacturers applied to the Government for the introduction of an import veto, but the Board of Trade, which has had this proposal under consideration, has declined to support it. A notable fusion has taken place in the fertilising industry, the Trollhätte Cyanidverk having assimilated the A.B. Koäfoeindustri. The new company will start with a capital of 16 million kr

whereof eight million represents the old capital of the Koäfoeindustri, four million are subscribed afresh by this company, and remaining four million represent the assets of the Trollhätte Cyanidverk. The new concern will carry on operations both at Trollhattan and at Gothenburg in manufacturing synthetic nitrogen on a large scale, according to a method invented by a civil engineer, Thorsoll.

DENMARK.—NEW BUDGET—INCREASED IMPORTS—BANKS—EXCHANGES—STOCK MARKETS.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, October 8.

THE Danish Premier and Minister of Finance, M. Neergaard, in introducing the Budget for next financial year, stated that the position of the country's finances was serious, but not dangerous. The report of the Foreign Exchange Commission might soon be expected, but it would prove no conjurer's wand. What was needed was economy, steady and intense work, and increase of export. Too much is consumed, labour is too expensive and irregular, and export too small. The new Budget shows current receipts of 318,367,000 kr, and current expenditure of 325,317,000 kr, leaving a deficit of about 7,000,000 kr. In addition, there is a calculated deficit of 45,345,000 kr on the capital section of the Budget, leaving a total deficit of some 52,000,000 kr. It must, however, be pointed out at once that M. Neergaard, unlike his predecessor, Dr Brandes, has not included the revenue accruing from a prolongation of the extraordinary taxation bills (spirits, wine, tobacco, &c.), which expires with the current financial year, but which he anticipated would be renewed later on in the session about as before, and which should yield about 241,500,000 kr, bringing the revenue up to some 560,000,000 kr. Higher rates had improved the position of the State railways, but the price of coal played an important part; the postal department showed a serious deficit, and a rise of postage would be necessary. A Commission would, however, be appointed to investigate the question of possible economies.

In spite of efforts to limit imports, the figure for August is the second highest of the year, 282,000,000 kr, against 259,000,000 kr for July. March imports, however, were 295,000,000 kr, the average for 1919 being 210,000,000 kr per month. Exports amounted to 153,000,000 kr. The increase to a great extent comes under coal, coke, and other fuel. According to some recent statistics, Denmark saves some 235,000,000 kr annually by manufacturing and consuming margarine and exporting its butter instead.

On September 30th the Danish National Bank showed an increase in notes issued of 103,846,438 kr, as compared with the same date 1919, and the specie fund had during the same period increased 39,501,714 kr. For the five leading Copenhagen banks the amount of home bills of exchange show an increase of 78,762,125 kr between the two dates mentioned, the holdings of foreign bills of exchange having at the same time receded by 36,380,491 kr. It also illustrates the trend of events, that loans against securities for the five banks showed an increase of 119,142,049 kr, whilst "cash credits" showed a decrease of 177,758,569 kr.

The Copenhagen Stock Exchange continues hopelessly sluggish, and during the month of September almost every company quoted shows a further fall in the quotation. The United Steamship Company, which has otherwise been very steady, has dropped from 416 to 389, in spite of a dividend for last year of 60 per cent. The East Asiatic Company has receded from 281½ to 267. The Danish Sugar Factories have dropped 10 per cent., &c.

As regards the foreign exchanges, £ reached 25.68 on September 20th, whilst dollars were at their highest, 740, two days later; marks commenced the month at 14.25, dropping to 11.0 on the 18th. At the time of writing, £ is at 24.92, dollars are at 715.00, marks at 11.65, and Norwegian kr are quoted at 98.00 against Stockholm 141.85, against 149.00 on September 14th; francs, which touched 51.00 on September 20th, are now quoted 47.75.

SPAIN.—BANK OF SPAIN—INCREASED NOTE ISSUE AUTHORISED.

(FROM OUR CORRESPONDENT.)

MADRID, October 9.

THE Bank of Spain has been authorised by Royal Decree of the Ministry of Finance to increase from 4,500 to 5,000 millions the limit of the issue of bank notes. The Minister of Finance, Señor Dominguez Pascual, states that this step has been taken in order to enable the Bank to aid national commerce and industry. By this Royal Decree the issue of Spanish bank notes can reach the total amount of 5,000 million pesetas, to be guaranteed by a metallic reserve fund as follows:—Up to 2,000 million pesetas a reserve of 46.50 per cent. of the issue, of which 28.50 per cent. is to be in gold and the remaining 18 per cent. in silver. From 2,000 to 5,000 millions, with the metallic minimum of 70 per cent., 60 in gold and 10 in silver. The account opened by the Bank of Spain for Treasury services will in future carry no interest, except when the balance of that account exceeds, for more than six months, 200 million pesetas. In that case the surplus above that amount will receive an interest of 1 per cent. per annum. When the above-mentioned term shall have reached nine months the interest on the surplus above the 200 millions will be paid at 2 per cent. per annum. In any case, the balance of the account cannot exceed 350 million pesetas Without due authorisation of the Council of Ministers the Bank of Spain will not be able to diminish its gold holdings, and will proceed as far as possible to acquire gold stocks. All previous laws of 1914, 1917, 1918, and 1919 in this connection are cancelled.

Letters to the Editor.

CURRENCY AND PRICES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I fully agree with the concluding paragraph of Mr Wallis' interesting letter in which he advocates "a really sound and enlightening theory of prices and wages." Indeed, the crying need for such a theory is emphasised by a consideration of certain of Mr Wallis' conclusions, based, if I may say so with all respect, upon the obsolete Marxian "labour cost" definition of value.

Mr Wallis tells us that when (under our pre-war gold standard) "the banks were confronted with the necessity of meeting their liabilities in gold when demanded, they were obliged to measure the value of their securities by the actual gold they would purchase. If commodity prices went too high gold producing would become impracticable, and less gold would be deposited in the banks. Credit would then be restricted, and prices made to fall through stoppage of production, unemployment, and competition to get work." Now, apart from the fact that a stoppage of production would be a factor in raising prices and not lowering them, is not the whole account of the banks' working policy a gross travesty of the facts? Does anyone really believe that in 1913 the banks took account of any problematical future reduction in gold production through rising prices as a guide to their policy and as a reason for restriction of credit in order to bring prices down? Was not the rise in prices controlled by the simple fact that the rise necessitated increased credits which were not available, since the basis of credit, gold, was limited to the existing supply, and therefore prices had to fall back to their previous level? As a consequence it was never a question of restricting credit, but solely of not increasing credit, a very different proposition.

Possibly this particular issue is not important in itself, were it not for the use which Mr Wallis makes of it as a foundation for his own peculiar views on prices, and his consequent demand "for an enlightening theory of prices and wages." Mr Wallis tells us that "by this process" (the gold standard and the action of the banks) "the labour cost value of commodities was actually determined by the labour cost value of gold, and a real standard of value was established." In other words, not gold, but the cost of producing gold, was the standard of value.

What does Mr Wallis mean by "labour cost value." One has to go back a long way in the history of economic fallacy to suggest that cost is the true criterion of value, since nowadays it is almost axiomatic that value does not depend upon cost of production. In what way and why an increased "labour cost value of gold," whatever that means, should increase the labour cost value of another commodity passes my comprehension. Is it suggested that the actual wage paid to the South African negroes working in the mines governs the labour cost value of my pair of boots produced in Leicester? I give it up.

"A really sound and enlightening theory of prices and wages" is urgently needed, and I suggest that the crux of our difficulties lies in a misapprehension of the vital distinction between price and value. Failure to differentiate between price and value is at the root of most economic fallacies, and of these Mr Wallis is not the least distinguished exponent. As I pointed out a short time ago in these columns, price is a relation between two values—the value of money (paper or gold) and the value of the commodity. Price is not the same thing as value, and Mr Wallis' failure to appreciate this distinction explains why he writes of "labour cost value," and why he thinks that through the introduction of a paper currency "value has got lost." Still, despite Mr Wallis' heresies, I am glad to note that he is an advocate of our return to the gold standard. But necessarily this must be a slow process. In the meantime, I think, a practical solution of our difficulties is to be found in the scientific control of "credit," which should be based primarily upon production, and neither upon the speculative activities of the community nor upon the "demands" of the workers for a wage irrespective of value produced.—Yours faithfully,

FRANK MORRIS.

Constitutional Club, Northumberland avenue.

THE "TRIUMPH OF NATIONALISATION."

TO THE EDITOR OF THE ECONOMIST.

SIR,—I observe that the reviewer of my "Triumph of Nationalisation" has not ventured to divulge his name or to answer my letter.

We have, however, a letter from Mr J. Ellis Barker, who tells your readers that the German State railways are a failure!

Mr Barker knows well that before her disastrous and deserved defeat Germany made a splendid profit out of her State undertakings (one-half the Prussian revenue was from Socialism). The present position is beside the point, for German trade and German railways, mining and shipping, were stripped by the Peace Treaty. Surely Mr Barker might respect the intelligence of your readers a little more.

As to Britain, there are very few State undertakings to cite, but the municipal work, as at Manchester or Blackpool, was almost universally successful.

Mr R. H. K. Clarke believes that Government control has led to the existing trade set-back. Surely this is *post hoc ergo propter hoc.* What the Government did for the nation through the wool trade in the war is a brilliant lesson in successful effort, despite the submarines. The soldiers were clothed cheaply. What the wool trade has done since control we all know. High prices are making the consumer impotent to buy. I myself have bought only one suit in the last few years; it cost me sixteen pounds. State action could have given it me for eight, which means that I would have bought two or more suits.—Your obedient servant,

LEO CHIOZZA MONEY.

October 11th, 1920.

WAR AND THE FOOD SUPPLY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There is one point in the consideration of the Free-trade question which I do not see discussed in your interesting article on International Free-trade in the current issue of the *Economist*, and that is the question of the food supply of this country in time of war. If you hold that the last war has ended all war, and that in the future the League of Nations can become an efficient instrument to prevent the recurrence of such a world-wide catastrophe, then my argument does not apply. But if you grant the possibility of a war in the future in which Britain may be engaged, then it seems to me that you must take into account the probable devastating effects of an intensified submarine campaign, with its menace to the food supply of this country. Are we justified, in the face of our recent war experience, in depending almost entirely on foreign countries for our food, and does not prudence tell us that British agriculture, at all events, must be fostered by our continuing to guarantee minimum prices to farmers (with its corollary of a guaranteed minimum wage to the farm worker), in order that in the hour of peril starvation shall not force us to surrender to a foreign foe?—Yours faithfully,

WALTER GRIFFITHS.

7 Glenhurst avenue, N.W. 5, October 11th, 1920.

[Unless we protect our agriculture to the point of making ourselves self-sufficient in food supply, the risk to which our correspondent calls attention would always threaten us, in greater or less degree, in the event of war. If we cannot eliminate war, we have to choose between Free-trade backed by an invincible Navy, and reverting to the position of an agricultural country.—ED. *Economist.*]

Books and Publications.

SOCIAL PROGRESS.

"A Philosophy of Social Progress." By E. J. Urwick, M.A., Director of the School of Sociology, London, &c. Second edition. Methuen and Co.

IN this new and revised edition, Professor Urwick develops his theme that those who venture to predict the direction of social change can only do so speculatively, and not scientifically. The scientist "cannot advance beyond the natural background of social events; and the range of happenings beyond that background is infinite." The book is rather stiff reading, but every page is interesting and suggestive.

POLITICS AND PROFITEERING.

"Modern Tariff History: Germany, the United States, France." By Percy Ashley, C.B. Third Edition. (London) John Murray 1920. 16s net.

THIS standard work, now brought up to the end of the war, overcomes the dulness incidental to the description of a multitude of changes in Customs duties by its clear presentation of the broad political and economic issues underlying the legislation described. This we have no space to summarise: but attention may be drawn to the excellent history of the German Zollverein and of the developments since Prince Bismarck reversed the Prussian Free-trade movement, partly to help his fellow-landowners and partly to compensate the States out of Customs revenue for their "matricular" contributions to Imperial funds; to the account of American tariff legislation from its initiation by Alexander Hamilton—the real originator of most of the stock arguments for Protection in the United States—and to the special features of French economic policy as set forth in the book.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
October 27.	October 28.

If there is one thing, other than the coal-strike fear, which stands out more than another from the conditions of Stock Exchange dealings this week, it is the difficulty which both buyers and sellers have experienced in getting their orders transacted at satisfactory prices. This is due to the fact that with so many uncertain factors about, brokers and jobbers find that the ordinary liquid character of markets tends to "dry up," as the Stock Exchange colloquially phrases it. Buyers are cautious about putting money into securities which they admit stand at tempting prices, but which they think will go still lower. Sellers are loth to accept current quotations unless compelled to do so. In fact, it is not an easy matter to sell in any except the most active markets, and, putting it shortly, business in the face of existing industrial financial conditions tends to become a matter of negotiation.

The Consols market easily recovered from the mild shock administered by the issue of 15 million pounds Local Loans stock at 50. Indeed, the comparative smallness of the actual sum involved is regarded as something of an anti-climax to the advance hints as to a big forthcoming issue under Government auspices. The War Loan and its satellites are none too steady, but it is a sign of the times to notice that various stocks in the Home Railway prior-charge list—debenture, preference, guaranteed—have moved up a point or two, while the dealers report that there is ready demand without a great deal of supply. The Queensland election figures show that Mr. Theodore, the Premier, has secured a very narrow majority, and this is taken as a consolation by those rendered apprehensive of Australasian security by the wild talk about confiscation reported to have been uttered by this gentleman. Amongst the newer corporation stocks, Bristol Sixes have been in request. Business in the gilt-edged market was tolerably active until the strike outlook assumed a graver aspect on Thursday.

French bonds weakened again, and the opening of the subscription lists in the middle of next week for the new French loan has been heralded by a further bout of selling by Paris and other French centres of various issues—Government, oil, and South African amongst them—evidently with the idea of raising funds to put into the forthcoming loan. Brazilians remain dull. Indeed, the tendency amongst foreign bonds has been heavy, in spite of the fact that the growing distrust of industrial shares causes a certain amount of attention to be given to foreign bonds by investors who want speculative channels for the employment of their money.

Improvement in several of the Underground Railways issues gave place to reaction upon obvious profit-taking, but this section is still amongst the firmest in the Home Railway market. Steam stocks are out of favour, further falls having occurred in the Heavies and in several of the rubbish-price stocks. Canadian Rails are dead, so far as market interest is concerned, and in Mexicans there is no business. Argentine railway stocks have swung rather aimlessly, but San Paulos enjoyed a smart recovery after their recent flatness. Cuban railways gave way on the news of the financial crisis in the island, to which, however, no great importance is attached. It is said that the difficulties created over speculation in sugar are hitting Amsterdam harder than Havana. Brazilian Tractions subsided, in spite of the revived hope of quarterly dividends being resumed before long.

Flatness occurred amongst rubber shares, in consequence of the disquieting situation in the Dutch market for raw rubber, owing to financial failures in Amsterdam and elsewhere. Although the price of raw rubber shows little variation on the week, it is becoming recognised that this year's dividend prospects for rubber producers are far from bright, and that big profits cannot be expected to return until the price of rubber takes a turn for the better. The Anglo-Dutch dividend, making 17½ per cent. for the year, gave satisfaction, but all the shares connected with the Dutch group have been affected by the financial difficulties in Holland. Both Dutch and French holders are declared to be selling in the oil market also, and Royal Dutch tumbled heavily, touching at one time 62½, as against the 73 at which the price stood a fortnight ago. Shells, Burmahs, and Mexican Eagles have been heavily pressed for sale. Prices fell substantially, though partial rallies left prices materially above the worst. Scottish-Americans gave way, and Var Oilfields advanced upon market gossip to the effect that "pools" were responsible for these movements, dissolution in the first place, and formation in the second, being held to account for the price-changes just mentioned. The oil list has swung at the tail of its leaders, and a good deal of support has become necessary to absorb the shares offered freely from the Continent. The shipping market is weak and lower. Amongst banking shares, National Bank of India gave way on account of the new issue, holders selling the old shares in order to provide funds for taking up the new. Other Eastern banking shares are weak, while in the home group a few trifling declines occurred. The insurance market has gone in the same downward direction. Animation in the textile group led to lower prices, and, here again, reports gained circulation to the effect that financial trouble is disturbing Bradford and some of the provincial centres interested in textiles. Motor shares were at first a little better, but later in the week Birmingham started selling, and the tone became once more dull. Tobacco shares, Cements, Iron and Steel, Armament, Wireless, and various others in the industrial sections have given way, more, perhaps, by reason of the lack of buying orders than from any special pressure to sell. The public, however, are showing no confidence in industrial shares at the moment, and, for want of support, the quotations of the less active stocks and shares tend to become somewhat lower. If there is to be a miners' strike, there will not be much demand for industrials.

The Kaffir market remains deserted by the public, and a hunting-ground (not always too happy) for professional operators who are content to scalp small profits or to cut short losses. Amongst Rhodesians, a sharp drop occurred in Falcons. Chartered are dull, in spite of the anticipation that the Cave Commission report will be issued before the end of this month. De Beers and other diamonds have given way, together with Rio Tintos, Paris being a seller of diamond and copper descriptions. Arizonas, on the other hand, spurted when it became known that an American group had made an offer for the company. Speculation in mining shares centred chiefly around Esperanzas, where there was a heavy fall on Monday, the latest developments indicating that the recent sensational find cannot be relied upon to continue. After the tumble there was a little buying, which helped to harden the price, but the gamble is regarded as being over until there shall be some other phenomenal discoveries. Several Mexican mining shares came in for a fair amount of activity. Broken Hills have been heavy, fresh labour troubles being reported from the Barrier field. The price of tin having fallen again, tin mining shares are out of favour and notice. Northern Explorations rose to 13s 6d before going back to 10s, and Russo-Asiatics managed to retain a certain degree of strength. But the shadow of a coal strike lay heavily over most of the markets as members of the House separated for the week-end.

To complete our record of new issues, company secretaries are requested to furnish us with copies of new prospectuses. Our readers can also assist by forwarding copies of prospectuses which may fall into their hands.

NEW ISSUES.

5-15 Year Treasury Bonds, repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. These are still on offer. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

Local Loans 3 per Cent. Stock.—Issue of £15,000,0 00 at price of £50 per cent. The stock will be inscribed in the books of the Bank of England and of the Bank of Ireland, and will be consolidated with the existing Local Loans Stock. The principal and interest are charged upon the Local Loans Fund, established under the control of the National Debt Commissioners, and, if such fund is insufficient, upon the Consolidated Fund of the United Kingdom, to the extent of any such insufficiency. The stock is redeemable at any time by resolution of the House of Commons on one month's notice. Applications may be for the whole or any part of the issue in multiples of £100. No allotment will be made for a less amount than £100 stock. This is a trustee security, giving a yield of 6 per cent.

Amalgamated Textiles, Limited.—Authorised capital £1,500,000, divided into 500,000 7 per cent. cumulative preference shares and 1,000,000 ordinary shares, all of £1 each. Including the present issue, the total of issued capital will amount to £1,160,000. This is an offer of 300,000 ordinary shares at 30s per share and £600,000 8 per cent. seven-year notes at 97½ per cent., redeemable at 102½. The company was incorporated in February, 1920. Its objects are to acquire interests in wool-combing and spinning businesses. The company has acquired all the shares in William Morris and Sons, Limited, and John H. Beaver, Limited, who are spinners of worsted yarns for home trade cloth manufacturers. The company has also contracted to purchase Messrs Daniel Illingworth and Sons, one of the largest worsted spinning concerns in Bradford. The total purchase price will work out at £2,230,377, plus sundry bonuses and fees, the amounts of which are not stated. Net assets, exclusive of goodwill, are valued by Messrs John W. Ackroyd, of Bradford, at £2,000,000. Combined profits are set out from 1912, after providing for excess profits duty. Figures of assets and profits suggest that either assets are valued at present inflated prices, or that profits (with the exception of the past year) have not recently shown a particularly favourable return on capital. Preliminary expenses and underwriting cost over £100,000. Although profits show severe fluctuation, the amount required to pay interest on notes should easily be found. While it may be quite true, as the prospectus states, that the ordinary shares at 30s per share give a yield of 13⅓ per cent., investors should realise that this distribution is based on this and last year's earnings. If, however, investors compare estimated dividends and interest with previous years' earnings, they are not likely to find any attraction in the offer of these ordinary shares at anywhere near the price fixed.

R. and J. Dick, Limited.—Authorised capita' £975,000, of which £812,500 has been issued. Issue of £250,000 8 per cent. seven-year notes at 97 per cent., "due" October 15, 1927, at 102. The company undertakes to set aside £20,000 a year as a sinking fund towards the redemption of these notes by means of annual drawings. No debentures are outstanding, and no securities ranking in priority to these notes will be created except to secure bankers' loans in the ordinary course of business. The business was established in 1848, and incorporated in 1908. An extensive manufacture of boots and shoes is carried on, and these are sold direct to the public through numerous retail branch shops. In addition, the company manufactures balata machine belts. Assets are valued at £1,150,779, exclusive of goodwill and of the proceeds of this issue. Profits are shown from 1913. These notes are well secured, both as regards repayment of capital and payment of interest. They have been oversubscribed.

Macfarlane and Robinson, Limited.—Authorised capital £500,000, of which 100,000 7 per cent. cumulative preference shares of £1 each and 99,765 ordinary shares of £1 each have been issued. This is an issue at par of 100,000 8 per cent. cumulative "B" preference shares of £1 each and 50,000 ordinary shares. Holders of or applicants for every four preference shares are entitled to apply for one ordinary share. Macfarlane and Robinson, Limited, was incorporated on July 5, 1909, with the object of amalgamating the businesses of Macfarlane Brothers, manufacturers of enamelled hollow-ware, Roxburgh Works, Scotstoun, Glasgow, and Wm. Robinson and Co., Limited, enamelled hollow-ware merchants, of Wolverhampton. Profits are given only from 1915, and allowance has been made for excess profits duty. A balance-sheet showing the position of the company at December 31, 1919, is also submitted. Net assets, exclusive of goodwill, amount to £223,837. Land, buildings, and plant, &c., have, however, been recently revalued, and this item is stated to be worth £310,114 at present values. The company on June 10, 1920, capitalised £33,258 of reserves. Holders of preference shares have limited voting powers. This is a reasonable proposition, and the preference shares are at present fairly well secured, the ordinary shares are speculative, and both are subject to the usual industrial risks.

Tyrrell and Green, Limited.—Authorised capital £142,500, divided into 80,000 8 per cent. cumulative participating preference shares of £1 each, and 62,500 ordinary shares of £1 each. This is an offer for subscription at par of 70,000 preference shares and 14,000 ordinary shares. Subscribers to five preference shares are entitled to apply for one ordinary share, but applications for ordinary shares alone are not entertained. After payment of preference dividend, and not less than 15 per cent. of profits has been placed to reserve, and so long as the reserve fund does not exceed £15,000, and the ordinary shares have received a non-cumulative dividend of 8 per cent., the balance is divisible as to 30 per cent. to the preference shares and 70 per cent. to the ordinary shares. The company has been formed to acquire the business of Tyrrell and Green, drapers, carried on at Above Bar, Southampton. The purchase price has been fixed at £107,500, of which £55,000 is payable in cash. Assets are valued at £107,500, but included in this sum is £14,365 for goodwill. Freehold and leasehold premises are stated to be worth £30,250, although no independent valuation appears in the advertised prospectus. Profits are given from 1916. These, however, are shown before excess profits duty have been deducted. It would have been better, perhaps, if in the place of the tabular statement of sales from 1913 profits had been given from this date. The vendors pay preliminary expenses, estimated at £5,852. Preference shareholders have limited voting powers. There is little attraction in the issue.

Hovis, Limited.—The directors proposed to increase the capital of the company to £550,000 by the creation of 250,000 additional ordinary shares, and 100,000 shares of £1 each will be issued at par. Present holders of ordinary shares will be entitled to an allotment of two shares for every three shares held. The new capital is required mainly for the purpose of purchasing the shares of Marriage, Neave, and Co., Limited, of Albert Bridge Mills, Battersea. Dividends for the past nine years have been 6 per cent. Although the existing shares are quoted at 1 to 1⅛, the prospective yield, even at par, does not seem attractive. According to the report and balance-sheet for the year ended March 31, 1919, there is a reserve fund of £100,000, but there is also an overdraft from bankers of £41,256.

Fellows Magneto Company, Limited. — Authorised capital £500,000, divided into 200,000 8 per cent. cumulative participating preferred shares of £1 each and 600,000 ordinary shares of 10s each. Participating preferred shares are entitled, in addition to the 8 per cent. cumulative dividend, to 20 per cent. of the net profits which it is decided to distribute as dividends in each year after payment of the 8 per cent.

preferential dividend. The ordinary shares are entitled to remaining 80 per cent. of profits. The present is an offer for sale of 145,000 ordinary shares and option certificates. From the statement issued by the company we extract the following:—"The purchase price of the 145,000 ordinary shares now offered for sale is £1 each, including the cost of the option certificate entitling the holder to subscribe for a further ordinary share in the company (but without any liability to do so) at any time up to December 31, 1921, at the price of 18s 6d per share. Holders of the option certificates will benefit very greatly by any rise in the value of the shares. For instance, should the value of the shares rise to 25s per share, in view of the strong position of the company and the great profit-earning capabilities of the business, the total profit to an investor of £100, on the exercise of his option, would amount to £70 in all (of which £57 10s would be free of all income-tax charges)." Investors should also realise that where the amount of shares allotted is increased, the profits of a company have to rise proportionately if the rate of dividend is to be maintained. Incidentally, investors should also calculate what they may lose if the shares should fall to par. We see no reason to assume that competition in the near future may not considerably reduce the margin of profits in magneto manufacturing firms, as in many other manufacturing undertakings. The information given in this offer for sale is insufficient for us to base a considered opinion on the merits of the offer.

The Standard Housing Company, Limited.—Authorised capital £450,000, divided into 285,000 cumulative and participating 10 per cent. preference shares of £1 each and 1,650,000 ordinary shares of 2s each. This is an issue of 224,500 preference shares, of which 207,500 are offered for public subscription. Holders of preference shares are entitled to 25 per cent. of "divisible profits." Subscribers for preference shares have the right to acquire at par two ordinary shares for each preference share. The objects of the company are to build houses and factories with slate in place of bricks. The company proposes to acquire slate quarries, timber plantations, wharves, saw-mills, &c. These undertakings are valued at £198,726, excluding unquarried slate. Unquarried slate is valued at £125,000. The purchase prices are fixed at £295,000, including £125,000 for unquarried slate, of which £113,000 is payable in cash. We are not convinced that "blocks of slate" can be used at less cost than bricks, except in districts near to slate quarries. If the system of construction described in the prospectus can be applied in all parts of the country, and it is as efficient as brickwork, and cheaper, it is strange that it should have escaped the attention of the Ministry of Health. It is pointed out that "shareholders' orders for houses will receive priority." This will attract the eyes of homeless house-hunters, but the investor wanting a house will be ill-advised to subscribe to such speculative issues. Nor are the issues attractive from the opulent investors' standpoint.

Meekes, Limited.—Authorised capital £80,000, of which £27,645 has been issued. This is an offer for subscription of 20,000 10 per cent. "A" cumulative preference shares of £1 each, and 7,500 ordinary shares of £1 each at par. Meekes, Limited, is a company which took over a business of drapers founded by Joseph Meeks in 1848. It was turned into a public company in 1919. A balance-sheet, showing the position of affairs, is submitted in the prospectus. This shows that net assets are worth just over £27,000, but goodwill is included in these assets at £15,000. Apparently, goodwill represents a big proportion of the assets. As past profits of the business are not shown, it is impossible to judge how far this valuation of goodwill is justified. Under the circumstances, therefore, we cannot recommend the shares to our readers.

Palace Picture House (Bolton), Limited.—Authorised capital, £15,500, divided into £1 ordinary shares. Issue of 14,750 shares at par. The company has been formed to acquire a cinema theatre of the above name. The promoters are selling to the new company a picture hall which cost them £13,500 for the same sum, plus about £1,000 profit. This is quite reasonable, but, unfortunately, the prospectus does not give us any valuation, independent or otherwise, of the property. This is an issue for consideration of local investors, and then only for those with knowledge of the directors, and who are willing to undertake the speculative risks attached to the cinema industry, and do not mind the restricted marketability of the shares which the smallness of the issue entails.

OIL OUTPUTS.

COMMONWEALTH OIL CORPORATION, LIMITED, Cable: For period four weeks ended August 13th, crude oil produced, 132,490 gallons; shale, 1,591 tons.

BRITISH BURMA PETROLEUM COMPANY, LIMITED.—A cable has been received reporting the total production of crude oil by this company and the Rangoon Oil Company amounted to 56,228 barrels for the month of September.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, *3 Arundel street, Strand, London, W.C. 2.*

COMPANY MEETINGS, &c.

THE HARTLEPOOLS PAPER MILL COMPANY, LIMITED.

THE CAPITALISATION PROPOSALS.

"EXTREMELY SATISFACTORY RESULTS."

MR WILLIAM HARRISON ON GERMAN COMPETITION.

An extraordinary general meeting of the Hartlepools Paper Mill Co., Limited, was held, on the 12th instant, at the First Avenue Hotel, Holborn, London, W.C., to consider resolutions for increasing the capital and authorising the capitalisation of part of the undivided capital profits.

The secretary (Mr N. Andrew) read the notice convening the meeting, and also the proposed resolutions, namely :—

A.—"That the share capital of the company be increased from £200,000 to £266,000 by the creation of 66,000 additional ordinary shares of £1 each, ranking in all respects *pari passu* with the existing ordinary shares of £1 each in the company, and that, subject to the resolution marked B, passed at this meeting of the company, such additional shares shall be issued upon such terms and conditions as the directors of the company shall in their absolue discretion determine."

B.—"That the directors of the company be and they are hereby authorised to capitalise the sum of £66,000, forming part of the undivided capital profits of the company, and that in respect of such profits so capitalised the directors be and they are hereby authorised to allot to or for the benefit (as hereinafter mentioned) of the members of the company registered as the holders of ordinary shares in the company at the date of the passing of this resolution, 66,000 of the unissued ordinary shares in the company of £1 each, credited as fully paid up, ranking for dividend as on and from October 22, 1920, and in all other respects *pari passu* with and carrying the same rights as the already issued ordinary shares of £1 each, such 66,000 shares to be distributed among the members so registered as aforesaid so far as practicable in proportion to the number of ordinary shares so held by them respectively, that is to say, in the proportion of one of such unissued ordinary shares of £1 each for every three existing ordinary shares of £1 each held by them respectively."

Sir Robert W. Carlyle, K.C.S.I. (the chairman), who presided, said : Gentlemen,—I have the pleasure to propose the resolutions A and B, which have already been read to you by the secretary, and I should like to take this opportunity of addressing you as shortly as possible about your company. With reference to the resolution to increase the share capital of the company to enable us to capitalise the undivided capital profits of the company and declare one bonus share for every three shares held by shareholders in the company, I want you distinctly to understand that this does not represent in any shape or form the "watering" of the capital of the company. The undivided capital profits which we propose to distribute amongst the shareholders, on the lines above mentioned, actually exist, and have been accumulated by your board since the formation of the company, quite apart from the considerable profits which the mill itself is earning in the ordinary course of its business.

WORKING UP TO ESTIMATED PROFITS.

With regard to the work at the mill, I am pleased to inform you that we are obtaining extremely satisfactory results, and are working up to our estimated profits for the financial year of this company of £100,000. The profits we are making amply warrant the interim dividend of 12½ per cent. per annum declared by the directors, and we could easily have increased it considerably, but we are determined as a board further to strengthen in every possible way the present strong financial position of the company. We are doing all in our power to secure a larger output at the mill by extending the mill for the early erection of the additional machine, which, when running, will increase the output by 70 to 80 tons a week.

I am glad to be able to inform the shareholders that our associated company, Olives Paper Mill Co., Limited (in which we have a considerable holding), is doing extremely well, and we are satisfied that the profits of £120,000 for 1920 estimated by the managing director of that company should be reached.

The board have every reason to be satisfied with the work done by our staff and workpeople, and I would especially mention the names of two of our directors who are on the staff, namely, Mr Henry Smith, the managing director, and Mr N. Andrew, the secretary. Any shareholder who would care to visit our mill, or the Olives Mill, to see for himself the work we are doing, will be welcome to do so by appointment. I now move the resolutions A and B.

STATEMENTS BY THE CHAIRMAN OF THE OLD COMPANY.

Mr John Garnett, J.P. : I have pleasure in seconding the resolutions. As chairman of the old Hartlepools Company for 15 years, I am delighted to know that the present company in its first six months' working is able, without touching the earned profits from the working of the mill, to put before the shareholders two such resolutions as these. It is with the greatest pleasure that I second them, and at the same time I wish with all my heart every success to the new company in the years to come.

Mr W. D. Ross drew attention to certain strictures which had been made on the manner of the company's flotation in a weekly financial journal.

The Chairman replied that the offer for sale of shares in this company was on exactly the same lines as in the case of other companies of excellent standing.

The resolutions were unanimously carried.

THANKS TO THE CHAIRMAN.

Mr Henry Smith (managing director) proposed a vote of thanks to the chairman.

Mr Kay seconded the motion.

Mr Garnett, in supporting the vote, said :—The question of profits for the years previous to those given might be answered in this way. The old company was one manufacturing its own pulp as well as paper. For some years before the war, and for a year or two after the war was started, we were suffering from very adverse circumstances in connection with pulp making; so much so that the directors of the old company decided to "scrap" the whole of the pulp-making plant, and they did so with fair advantage, because, although some of the plant was only two or three years old, the prices of lead and antimony rose to such an extent through the war that we were able to "scrap" the whole of that new plant, and get, if anything, actually more than we paid for it, as new material. During those years we were not able to make, in my opinion, as chairman of the company for some 15 years, anywhere near the profits that we should have made if we had been making our own pulp. With regard to the outlook for the shareholders of the new company, all I can say is that I have three times the amount of capital in this new company than I had in the old one. If that is not sufficient to give the new shareholders confidence, I may add that I have been in touch with the new board ever since they took office, and they have disclosed everything I wanted to know in a thoroughly frank way. I am perfectly satisfied that the interests of the new shareholders are in good hands, and that we have every prospect of being shareholders in a very successful company under the auspices of the new board and under the new conditions of working.

The vote was unanimously accorded.

Mr Popham said he understood Mr Harrison had recently been to Germany with a view to making inquiries into the paper-manufacturing industry there, and the conditions of the trade generally, as compared with the industry in this country. Previous to the war Germany was our greatest competitor. He thought the meeting would like to hear a few remarks from Mr Harrison as to his visit.

MR WILLIAM HARRISON ON THE GERMAN PAPER-MANUFACTURING INDUSTRY.

Mr William Harrison : Sir Robert and gentlemen,—A very interesting question has been asked, and I should have liked time to get together data in order to answer it with very great care. I might say, however, that I spent practically the whole of August and some part of September in making a most extensive tour through Germany. My tour was for the benefit, I certainly believe, of this company. I charged the company nothing for it. Now, sir, what did I find in Germany during my travels of some thousands of miles? I found that the German paper mills were in a very bad condition. They were practically without coal, and the millowners told me, with a certain sadness in their eye, "We cannot make paper as long as the French compel us from Monday morning until Saturday mid-day to ship to them by tugboats some 2,000,000 tons of coal per month." I found that one of the largest paper mills I visited had not been running for seven months, and had only enough coal to run for two or three days. But, gentlemen, the German coal question and the paper trade so far as it concerns this country is only one side of the matter. I want you to consider another side, and it is this :—As you know, there have been great fluctuations in the mark on the exchange, manipulated, in my view, by the international Jew. When I was in Germany I bought the mark at something like 160 or 170 to the £; it has since been something like 235 to 240 to the £. That, in my view, is an important factor as affecting the paper industry of this country. So long as we have that fluctuation in the German exchange, we have to be on our guard, and as a board we are determined, along with other paper makers in this country, to be on our guard, for, believe me, the German does not mind the exchange being down at 235 to the £.

PROTECTION AGAINST GERMAN DUMPING.

Rather does it concern the British manufacturer. It is up to us to see that the German who bought his pulp in Finland at 150 marks to the £, and can now dump it in this country with marks at 235, thus getting more marks for his sovereign, is not permitted to do so, and I for one am going to take good care that the paper makers of this country combine together, if necessary, to stop this dumping if it ever takes place. But we are in this position :— There is no chance at the moment of large dumping of German paper, although you get isolated lots offered to you at far less than the British paper makers can quote you, but the German, from my study of the situation in Germany for nearly a month, is still a very wily individual, and we will take care, in combination with other mills, to see, if necessary, that the fluctuation in the German exchange is not going to help him. Sir Robert Carlyle and myself, along with other delegates, are leaving on Friday for an extended tour in Norway, Sweden, and Finland to study the situation there on behalf of your company, because we realise as a board that the key to the situation in the future prospects of any paper mill which is properly conducted in this country lies in people who are directing the company knowing how to purchase, and when to purchase, the raw materials for your mill. We want to study that situation. Sir Robert at one meeting, not long ago, referred to our contemplating the purchase of a pulp mill in Norway or Sweden. That is an important matter, in my opinion, for the future prosperity of this company.

THE BOARD'S CONSERVATIVE POLICY.

A shareholder has raised certain questions, and I should like to say that so long as I am on this board I will always vote against the payment of excessive dividends. I believe in conservatism. If you get from 12 per cent. to 15 per cent., knock off your debentures, gentlemen. That is the principle so far as we are concerned, and it may send our friend away happy if he knows that we could have paid for this half-year, not 12½ per cent., but over 20 per cent., and then got ready at the end of the year to make a big hole in the debentures. We are suffering from E.P.D. We are going to pay it; we cannot help ourselves. That is the position, but there are other companies—hundreds of them—which do not state what their E.P.D. is. It is an unfair tax, and one which I hope will be put an end to by the end of March, 1921. In conclusion, all I can say is that no stone will be left unturned to make this company a prosperous and a dividend-paying concern. We are not concerned about the value of the shares; we are concerned to pay a good dividnd year in and year out to the shareholders. That is our policy and the result we have to aim at.

The proceedings then terminated.

CLERICAL, MEDICAL, AND GENERAL LIFE ASSURANCE SOCIETY.

RECORD NET NEW BUSINESS.

The ordinary general meeting of the Clerical, Medical, and General Life Assurance Society, was held on the 15th instant, at the offices, 15 St James's square, London, Mr Francis E. J. Smith, chairman of the company, presiding.

The general manager, Mr Arthur Digby Besant, having read the notice calling the meeting and the auditors' report,

The Chairman, in the course of moving the adoption of the report and accounts, said : The net new business completed reaches the record total of over £1,650,000, a figure nearly £500,000 ahead of the preceding year, which, in its turn, was the largest amount of new business we had ever effected. For the first time since 1915, our death claims do not record any payments directely due to the war. In our last report the war claims amounted to nearly £30,000, and it is very satisfactory to find that the claims on this occasion are some £40,000 less than the normal civilian claims a year ago.

I regret to say that our expense ratio this year has risen to £16 3s 7d per cent. of the premium income. The directors have met this increase by increasing our premiums for all classes of new assurances without apparently checking the flow of business. The new non-profit contracts will thus pay their fair share of the increased expenses, while, as regards the new with-profit policies, the margin available for bonus purposes will remain intact.

FINANCE.

I now come to the questions of finance, by far the most difficult and momentous problem which the directors have had to face. You will notice that we have reverted to the pre-war practice of valuing our securities each year, so that he who runs may read. After full consideration, the directors decided that all the depreciation which has accrued since the last bonus in 1916 should be written off now instead of waiting until the end of our valuation period in June, 1921. The amount so applied in writing down the investments of our Life Assurance Fund amounted to £207,000. We also sold perpetual and long-dated securities amounting to about 2¼ millions at a loss of over £160,000. We could not to-day repeat that transaction without a further loss of over £150,000. We have reinvested the proceeds in short-dated securities, mainly Treasury bills and National War Bonds, maturing in 1922 and 1923. The latter now stands in our books at the price of about 96¾ and 96 respectively, and as they are repayable at the price of 102, there is every hope that they may show some appreciation in value by the time we close our books for actuarial investigation in June next.

We can now survey the total cost which the war has imposed upon the society during the past six years. The actual death claims, directly due to the war, have amounted to £235,000. Depreciation and loss on securities realised have cost us £680,000, and we have paid at least £200,000 in the form of additional income-tax. The total thus amounts to over £1,100,000 apart from a considerable sum paid away in the form of increased expenses.

We are now in the closing year of our bonus period, and at a time when so many offices have found themselves compelled either to reduce their bonuses or to pass them altogether, the society finds itself in the fortunate position of being able to hold out a fair hope that our pre-war standard of bonus may be maintained.

You have all received the board's communication of last July dealing with the offer for our shares received from the Employers' Liability Assurance Corporation. The offer, I may tell you, has been accepted practically by all our shareholders, literally by more than 99 per cent. of them. Our identity and independence have, I venture to assert, been fully secured. Nor have we any doubt of the value of the advantages to be secured by a combination of two such companies as ours and the Employers' Liability.

The report was unanimously adopted.

At an extraordinary general meeting various alterations in the articles of association, of which notice had been given, were unanimously agreed to.

IMPERIAL AND FOREIGN CORPORATION, LIMITED.

MR HERBERT GUEDALLA ON E.P.D. AND GENERAL TRADE CONDITIONS.

The ninth ordinary general meeting of the Imperial and Foreign Corporation, Limited, was held on the 12th instant at Winchester House, Old Broad street, London, Mr Herbert Guedalla, managing director, presiding.

The Chairman moved the adoption of the report, and, after analysing the leading items in the accounts, went on to say : With regard to our prospects for the current year, I have referred to the fact that we have a considerable amount of business on hand in the shape of new issues. With regard to the financial barometer, no one regrets more than ourselves the fact that in the case of good concerns the trend of interest payable on securities has become higher and higher. The natural effect has been to cause what I hope is only a temporary depreciation in good securities which now give a less return. If we are to believe what we read in the newspapers about the trade of the country, it is difficult to reconcile this state of affairs with a period of dear money. The chief causes of dear money at the moment must be ascribed to the problem of the floating debt, the enormous unproductive expenditure of the Government, and, not least, to the iniquitous excess profits duty. Continual references to Government extravagance have inspired a lack of confidence in the ordinary investor in any new form of Government security, but it should not be beyond the wit of man to devise some scheme for reducing the floating debt without further increasing taxation. The ordinary investor does not understand Treasury bills, but he would understand some scheme by which, in lieu of taking cash for interest due on Government loans, he was offered some attractive security. Further, the opinion has been frequently expressed, and I heartly endorse it, that the appointment of a committee of the leaders of our joint stock banks to advise the Chancellor would go far to restoring confidence in Government finance.

EFFECTS OF E.P.D.

Perhaps as an issuing house we are in a better position than most people to appreciate the harmful effects of the excess profits duty. This has been the finest device for checking production and sending up the prices of commodities, and more than possibly is the cause of most of the labour unrest which exists at present. The natural incentive to increase business is killed if the only result is to be that the Government takes the major part of the profit attaching to any increase, and, of course, it is impossible to start new concerns in competition with old businesses with well-established profits. I was referring, however, more particularly to the effect of excess profits duty on the money market. In the ordinary way, without any duty of this character, many prosperous concerns would have needed further working capital, having regard to the higher cost of wages and raw material. This, to a great extent, might

be supplied out of undivided profits and reserves. Now, if they are successful, a large part of the profits goes to the Government, who insist on payment in cash, and do not recognise that profits are usually represented by book debts and stocks. This accounts for a good deal of borrowing, which the money market might otherwise have been saved. Of course, we have no objection to making issues for sound concerns under such circumstances, but we naturally prefer to think that fresh money is going into extensions for the benefit of employment and trade of the country. With regard to the trade position, you will have noticed continual references in the Press to the falling off of trade in certain commodities, but with the world crying out for goods, I personally look upon this as a passing phase.

HOME TRADE.

In the meantime, home trade, taken as a whole, as is evidenced by the results shown in numerous prospectuses, is by no means bad, and I dare say would be a good deal better if the labour position were more settled. To belong to a controlled trade at the present time may have its disadvantages, but it also has its benefits, and I instance, as a case in point, that in the event of a coal strike, which I do not anticipate, the collieries themselves, under the scheme of their guarantee of profits by the Government, would suffer least of all. Perhaps the greatest safeguard at the present time is that higher wages have enabled labour to save, and invest not only in Government securities, but in many trading concerns, as inspection of the share registers will show. In one particular business I anticipate a very busy time. We have several first-class issues to make during the next few months, whilst we have various profitable schemes which ought to fructify during the coming year. The additional capital, for which we already have large promises, will greatly strengthen our position and simplify the transaction of new business.

Sir Ian H. Amory, Bart, J.P., C.B.E., seconded the resolution, which was carried unanimously.

An extraordinary general meeting of the company was held immediately before the general meeting. Resolutions passed at a meeting of the corporation held on September 24th approving a scheme of arrangement for the reorganisation of the capital were unanimously confirmed as special resolutions.

AFRICAN STEAM SHIP COMPANY.

INCREASE OF CAPITAL AUTHORISED.

An extraordinary general meeting of the proprietors of the African Steam Ship Company was held on Friday, October 8, 1920, at 2.15 p.m., at the offices of the company, 23 Billiter street, E.C., the Lord Pirrie, K.P., P.C. (chairman of the company), presiding.

The secretary having read the notice convening the meeting,

The Chairman said: Gentlemen,—In the last annual report of the company we informed the shareholders that we had applied for a supplemental charter, authorising the company to increase its capital from £2,000,000 to £5,000,000, and you will have seen from the notice calling this meeting that his Majesty has been graciously pleased to grant this charter, subject to its acceptance by the shareholders in general meeting.

GREAT DEVELOPMENT OF WEST AFRICAN TRADE.

As I pointed out in my speech to the shareholders at the last annual meeting, in view of the great development of the West African trade, the board consider it necessary, not only in the interest of the company, but also essential for the welfare of West Africa, that this company should be in a position from time to time to increase its fleet, in order that the development of the West African trade should not be hampered.

The shareholders have had an opportunity during the past week of inspecting the supplemental charter, and I therefore move:—"That the supplementary charter granted by his Majesty the King, dated August 23, 1920, be and the same is hereby accepted by the company."

Mr Owen Harrison Williams seconded the motion, which was carried unanimously.

The proceedings then terminated.

NIRMALA (JAVA) PLANTATIONS AND LANDS COMPANY, LIMITED.

COMPANY'S STRONG POSITION—SATISFACTORY YEAR.

The annual general meeting of shareholders of the Nirmala (Java) Plantations and Lands Company, Limited, was held, on the 15th instant, at 38 Eastcheap, London, Mr Walter Hilliers (chairman of the company) presiding.

The representative of the secretaries (Messrs Rowley, Davies, and Co., Limited) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his address, said: The year's working has resulted in a profit of £8,155 7s, as against a loss of £4,613 in the previous year. All the indebtedness of the company has been paid off, and all the arrears of preference dividend have been paid to June 30th. The company is now in a strong finan-

cial position The tea gardens, though generally improved, have still been a source of trouble. First a severe attack of blight occurred on one of the divisions. The other cause was that the tea bushes suffered in their flushing capacity, and are taking longer to recover than we hoped for. The estimate for the current year is 750,000 lbs, and we hope it will be reached. As regards the immediate prospects for tea generally, and this company in particular, I am sorry that the expectations expressed at the last meeting, although justified by the conditions then obtaining, were realised only during the subsequent few months. After a time, conditions which proved the forerunner of the difficult times through which we are now passing, supervened, resulting in a very serious drop in values of tea. Measures as regards reduction of crops will not be put into operation on this company's property until next year, as a good part of the current year's crop has been sold at satisfactory prices, and our endeavour is to maintain quality up to standard, while harvesting as much as circumstances will permit. It is a source of satisfaction that this company, at this critical time in the tea industry, finds itself in a position to weather the storm. As regards the Mandalasarie division, the same remarks apply as to Nirmala. The Mandalasarie division now manufactures its own tea, and the quality is quite good. As regards rubber, we harvested 184,392 lbs, against 108,886 lbs in the previous year. Our estimate for the current year is 280,000 lbs, which we think will be reached. Of this quantity about 70 tons have been sold, at prices very much above present market values. Measures for restriction of rubber crops have also been taken by the various associations, with the view of preventing temporary over-production, and this company intends to follow whatever steps our Rubber Growers' Association may decide to take.

The report and accounts were unanimously adopted.

CLAUDIUS ASH, SONS, AND CO., LIMITED.

CENTENARY YEAR—CONTINUED EXPANSION.

The fifteenth annual general meeting of Claudius Ash, Sons, and Co., Limited, was held on the 14th instant, at the offices, Nos 5 to 12 Broad street, London, Mr George Edwards, J.P. (the chairman), presiding.

The Chairman said that this was the centenary year of the business, which was established in 1820, and he believed he was correct in stating that there had been continuous progress throughout. They could claim for their house that it was the pioneer in their particular industry, which was essential to dentistry, and was now recognised as being of vital importance in maintaining the health of the people. They could again congratulate themselves upon a successful year's work. Business had expanded, and would have been still better had conditions been more favourable to the development of international trading. After making provision for loss in exchange, the net profit was maintained. Income-tax, however, which amounted to over £32,000, was nearly £10,000 more than in the previous year. They were again placing £25,000 to reserve, making the reserve account £200,000, and with the £100,000 already written off goodwill, a total of £300,000 had been carried to reserve during the past 14½ years.

The company's manufacturing departments, both at home and abroad, had been expanded, as the board fully recognised that their success depended on the efficient supply of dental requisites and tools of the finest quality and design at the lowest prices compatible with good workmanship, and in foreign countries, with protective tariffs, low rates of exchange and costly transport, that was more than ever necessary. During the past six years over one-fifth of their capital had remained locked up in the countries with which we had been at war. That was a serious factor, but it emphasised the good results obtained by the remaining four-fifths of the capital and reserves with which they had traded. The machinery under the terms of the Peace Treaties for recovery of their claims for compensation in regard to their property sequestrated during the war moved slowly, but, he trusted, surely, and he hoped the time was not far distant when they would be in a position to report a just settlement. The report referred to the successful issue in March last of 150,000 £1 ordinary shares, the proceeds of which would be utilised in furthering the business, opportunities for which increased as it became more widely realised that one of the greatest preservatives of good health was careful attention to the teeth. That the company might be ably equipped for serving the dental profession would always be the great object of their business, the foundation of which was laid just 100 years ago.

The report and accounts as submitted were adopted, and the dividend recommended was declared.

PUBLIC INCOME AND EXPENDITURE.

REVENUE AND OTHER RECEIPTS.

† Rates lowered 1/2% on Jan. 2, 1918, and lowered 1/2% on Feb. 14, 1918, but raised 1/2% on Oct. 6, 1919, and 1/2% on Nov. 6, 1919, and 1% to 5% on April 15, 1920.
‖ Lowered from 3 1/4% to 3% on June 5, 1918, but was raised to 3 1/4% on July 31, 1919, to 3 3/4% on Oct. 6, 1919, to 4 1/4% on Nov. 6, 1919, and 5 1/4% on April 15, 1920.
* Changed from 4 3/4% to 4% on Dec. 27, 1917, and from 4% to 3 1/2% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3 3/8% (July 14 to August 5, 1919, period of daily sales); three months, 3 1/2%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4 1/2%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4 1/2% to 5 1/2%, and the six months' rate from 5% to 5 1/2%. On March 19, 1920, daily sales of six months' Treasury bills at 5 1/2% were replaced by twelve months' Treasury bills at 5 1/2%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5 1/2% to 6 1/2%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

R. G. JAQUET, Accountant-General.

India Office, October 11, 1920.

Messrs Samuel Montagu and Co. write as follows on October 14th:—"Gold: The Bank of England gold reserve against its note issue is £121,671,405, a slight increase of £2,350 as compared with last week. A moderate amount of gold came into the market this week and was taken for New York, with the exception of small amounts for India and the Continent. It is reported from New York that $11,550,000 in gold has been received there from London. We are informed that Japanese banks shipped from Bombay to Japan during the first week of October bar gold to the value of Rs. 66,00,000, and are reported to have bought a further 1,50,000 tolas. It is interesting to note that India is thus disgorging substantial amounts of the gold acquired since free import was allowed in the country. The following were the total United Kingdom imports and exports of gold during the month of September, 1920:—Imports, £2,248,753; exports, £7,369,563. Silver: The low sterling value of the rupee in the early part of the week under review provoked some bear sales of silver from the Indian bazaars, and intensified the weakness recently apparent in the China exchange. The news from China is disquieting. Famine is prevalent in several localities, and such conditions must be a deterrent against trade movements. China, unfortunately, is not in the position of India, where, should drought and distress prevail, the Government is able to organise relief on a large scale, and possesses the financial resources necessary for methods involving considerable expenditure. The authorities in China have also to cope with military developments, and a certain amount of friction in foreign relations. Faced with a 12 anna monsoon, India's relation to a rise or fall in the price of silver is rather peculiar. A rise would have probably a positive effect—that is to say, the external value of the silver rupee might exceed its internal value; if so, silver in some form or other—bars or coin—would be exported. In the case of a fall, the effect might be only negative, for, with indifferent harvests, even cheap silver from abroad might not appeal to the natives, in view of ample stocks available from within. The divorce of silver from currency in South America—the place of plentiful production of the metal—is revealed by a statement in *Financial America* touching a new issue of $5,000,000 paper money. The paper adds 'it is hoped that the circulation of this new currency will relieve the shortage of paper money in the City of Lima.' Unfortunately there are other parts of the world where this happy state of a 'shortage' of paper money does not exist. Japan is reported to have bought 800 bars of silver from India for shipment as opportunity offers. The stock in Shanghai on the 9th inst. consisted of about 36,200,000 ounces in sycee, 23,000,000 dollars, and 650 bars of silver, as compared with about 34,000,000 ounces in sycee, 26,000,000 dollars and 2,080 bars of silver on the 2nd inst. The Shanghai exchange is quoted at 5s 6d the tael."

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and corresponding periods in previous years are as below:—

1920.	Gold. Per Ounce.	Silver. Cash, Per Ounce.	Silver. Forward, Per Ounce.	Date.	Silver. Cash, Per Ounce.

RUBBER OUTPUTS AND DIVIDENDS.

In the table below we give the latest and past three years outputs, and dividends for five complete years of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

Name. Year ends December 31, Except where Stated.	Outputs. Year 1917.	Year 1918.	Year 1919.	Output Month Sept., 1920.	Increase or Decrease.	Output Nine Months of 1920, Except Where Otherwise Stated in Brackets.	Increase or Decrease.	Dividends paid in Past 5 Complete Years. 1915.	1916.	1917.	1918.	1919.

(a) And 33⅓% in fully-paid ordinary shares.

The Anglo-South American Bank propose to pay a final dividend of 9s per share less tax, and a final dividend of 7s 2½d per share, less tax, on the new shares issued in October, both dividends being payable on October 27th. This distribution makes a total payment of 15 per cent. for the year, in addition to which a special interim dividend of 10s per share on the old shares and 1s 3d on the new, both less tax, was paid in April last.

After being subjecte to a raging fire for 48 hours, this Chatwood Safe withstood the fall upon it of the massive steel girder shown.

THIS PHOTO SHOWS THE RESULT OF THE COLLAPSE OF A BUILDING ON A "CHEAP" SAFE, THE OUTER BODY OF WHICH IS BUILT UP OF SHEET IRON

THE Degree of protection against Fire provided by THE CHATWOOD SAFE extends considerably beyond what is generally implied by the words "Fire-Proof."

Ample provision has also been made in its design and construction for withstanding a fall from a considerable height (during a big fire) or the direct fall upon it of a great weight (such as collapsing walls or massive girders) while still in its heated condition.

The photograph reproduced above shows the result of the collapse of a building on a so-called "cheap" safe, the outer body of which is built of sheet iron, and not manufactured from one solid piece of steel as in the case of THE CHATWOOD SAFE.

The top photograph shows THE CHATWOOD SAFE which, immediately after being subjected to the intense heat of a raging fire for two days, withstood the fall upon it of a massive steel girder. The Safe was afterwards opened with its own key and the contents found intact.

Fire Proof Since 1858. **THE CHATWOOD SAFE** *Burglar Proof Since 1858.*

THE CHATWOOD SAFE BOOK.

Send a post-card to-day for a copy of this 40-page illustrated booklet. Contains full details and specifications. Gratis and post free upon request.

CASCALHO SYNDICATE.—September:—"814 cubic yards of gravel were treated, which produced diamonds and gold to the value of £534; this equals 13s 1d per cubic yard." Cable adds:—"Amount of overburden overlaying the gravel is decreasing in thickness as the workings get further away from the river."

Reports and Notices.

At an extraordinary general meeting of Edward Lloyd, Limited held at the head office, 4-7 Salisbury court, E.C. 4, the resolutions passed on September 27th last to carry out the directors' proposals for the capitalisation of £600,000 of the reserves and undivided profits of the company, and for the increase of the preference share dividend from 5½ to 7 per cent. per annum, were duly confirmed.

Mr H. A. Vernet, of Messrs Robert Benson and Co., and Mr Charles H. Pearson, the ex-general manager of the Central Argentine Railway Company, Limited, have been elected directors of the Central Argentine Railway, Limited.

Messrs Sheppards and Co., of Gresham House, Old Broad street, E.C., announce that they have admitted into partnership Mr Christopher Gurney Barclay, the son of their senior partner, as from the 13th inst.

* Half-year. † Free of income-tax. (t) June 4, 1919, to March 31, 1920.

The registered office of the Scottish-American Oil and Transport Company, Limited, and Tankers, Limited, will be situated at 37-41 Gracechurch street, London, E.C. 3, on and after Monday, October 18th.

Mr H. J. Mitchell, general manager of the Explosive Trades, Limited, since its incorporation, has been appointed to the board of directors.

GOVERNMENT STOCKS, &c.

VENEZUELA (3 PER CENT. DIPLOMATIC DEBT).—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 15s 4½d, being the moiety of the fifth fortnightly instalment of the Debt Service payable to the Council in respect of the half-year ending December 31, 1920.

BANKS.

ANGLO-SOUTH AMERICAN BANK.—The report for the year ended June 30, 1920, states that the net profit, after making provision for all charges, rebate, &c., amounts to £1,024,156, which together with £241,619 brought forward, makes a total of £1,265,775, of which £262,500 was absorbed by the interim dividends paid on April 30th last. There is now available £1,003,275. The directors recommend a final dividend of 9s per share, less tax, on 722,904 old shares. Final dividend of 7s 2½d per share, less tax, on 150,000 new shares issued in October, 1919 (being pro rata on capital paid up or due to May 1, 1920), both payable October 27th, making 15 per cent. for the year, in addition to which a special interim dividend of 10s per share on the old shares and 1s 3d on the new, both less tax, were paid April 30th last; placing to expenses in connection with the acquisition of the shares of the British Bank of South America £58,600, to investments reserve to provide for depreciation of securities £50,000, to reserve fund (which now amounts to £3,850,000, including premiums received on new issues) £136,000, to staff pension and guarantee fund £25,000, to bonus to staff £75,000, leaving £393,116 to be carried forward.

TATA INDUSTRIAL BANK.—A cable from the head office in Bombay gives the result of working for the half-year ended September 30, 1920, as follows:—Amount carried forward on March 31st, Rs.3,08,324; profit at September 30, 1920, Rs.8,48,230—Rs.11,56 554. Deduct: Income-tax March 31, 1920, Rs.2,74,156; transfer to reserve fund, Rs.3,50,000 (now making it Rs. 7 lacs); interim dividend at 6 annas per share, Rs.3,79,366—Rs.10,03,522; leaving to be carried forward, Rs.1,53,032.

MISCELLANEOUS.

ARGENTINE NAVIGATION.—The report for 1919 states that the profit, after providing for depreciation, amounts to £47,682. The board have placed £25,000 to reserve (bringing that account up to £150,000), and after making provision for the dividend of 6 per cent. on the cumulative preference shares for the year, they recommend that the balance of £14,050 be carried forward. The insurance account now amounts to £217,309.

BENGAL IRON.—The report for the six months ended March 31, 1920, states that the net profit is £260,345. Deducting transfer to taxation reserve, £86,000; general reserve being proportion of profit from October 1st, 1919, to date of incorporation £54,272; depreciation and colliery sinking fund, £19,135; interest on debenture stock of the Bengal Iron and Steel Company to date of redemption, £2,412; and preference share dividend paid, £9,365, leaves a net balance of £89,159, which the directors reccommend be applied in payment of an actual 5 per cent. dividend on the ordinary shares, carrying forward £10,458, subject to commission to the directors. The transfer of property and leases from the Bengal Iron and Steel Company is in progress, but has not yet been quite completed. As the Bengal Iron Company was not incorporated until December 5, 1919—although it acquired the business as from October 1, 1919—the proportion of the net profits for the half-year relating to this period up to December 5, 1919, is not available for distribution as dividend, and has therefore been transferred to reserve account as above. The preliminary expenses incurred to date have been written off against the account.

COLTNESS IRON.—The report for the year ended July 31, 1920, states that the profit, after making provision for liabilities under the Finance and Coal Mines Acts, amounts to £248,032, from which fall to be deducted: amount written off for redemption and depreciation, £49,309; placed to suspense account for depreciation of the special reserve fund investments, £3,500; and there has been set aside to meet the expenses of relining, &c., of blast furnaces and extraordinary repairs to ammonia works, £20,000; leaving £175,223, which with £14,790 brought forward makes £190,013. The directors recommend a further dividend on the ordinary shares of 3 per cent., together with a bonus of 4 per cent., making a total distribution of 10 per cent. on the ordinary shares for the year, placing to ordinary reserve fund £95,000, and carrying forward £16,763.

LEACH'S ARGENTINE ESTATES.—The report for the year ended March 31, 1920, states that the profit on trading, after providing for income-tax and corporation profits tax, amounted to £268,792, which, with income from Government securities, interest and transfer fees, together £14,077, makes £282,869, from which must be deducted depreciation, £54,971; interest on debentures, directors' remuneration, London charges, &c., £55,939, and the directors have transferred £50,000 to the reserve, which now stands at £400,000, leaving an available balance of £121,959. To the amount attributable to the preference shares has been added £935 brought forward, making a total of £46,425. The directors recommend a further dividend of 3 per cent. and an additional dividend of 3 per cent., making a total of 9 per cent. for the year, leaving to be carried forward to credit of preference shareholders £1,425. The amount attributable to the ordinary shares, including £1,417 brought forward, is £62,397. A further dividend of 3 per cent. and an additional dividend of 6 per cent., making 12 per cent. for the year, are recommended, carrying forward to credit of ordinary shareholders £2,397. To the £15,489 attributable to the deferred shares has been added £58 brought forward, making £15,548. A dividend of 3½d per share is recommended, carrying forward to credit of deferred shareholders £235.

RIO NEGRO LAND.—The accounts for the year ended June 30, 1920, show a profit of £88,691. Adding £12,604 brought forward, there is available £101,296. The directors have transferred £25,000 to live-

stock renewals reserve and £15,000 to renewals and contingencies reserve; they recommend a final dividend of 5 per cent., less tax, and a bonus of 5 per cent., less tax, making 15 per cent., less tax, for the year, carrying forward £16,296.

ROBINSON AND CLEAVER.—The report for the year ended July 31, 1920, states that the balance of profit on trading, including £45,656 brought forward, is £124,092, from which have to be deducted income-tax, directors' fees, fees of auditors and debenture stock trustees, &c., as well as provision for depreciation of fixtures, plant, &c., sinking fund instalment as against leasehold properties, and debenture interest calculated to July 31, 1920, amounting together to £20,502, leaving available £103,590. The directors recommend a dividend on the ordinary shares of 5 per cent., free of tax, placing to reserve £30,000, to staff benevolent fund £2,000, leaving to be carried forward £52,090.

W. H. DORMAN AND CO., LIMITED, STAFFORD.—The net profits for the year ended July 31, 1920, after providing for all working expenses, excess profits duty, and corporation profits tax, are £72,980. To this figure must be added the amount brought forward from the previous year, less the amount of excess profits duty payable to July 31, 1919, bringing the total up to £100,356. The fixed dividend on the 8 per cent. cumulative participating preference shares to June 1, 1920, amounting to £5,363, has been paid, leaving available for disposal £94,992. It is to be noted that the whole of the expenses incurred in the capital issue of December last, amounting to £17,874, has been written off.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Harvest operations are almost completed, except perhaps in the case of barley and late-sown oats, while autumn cultivation is proceeding rapidly under favourable weather conditions. Latest estimates report the wheat crop slightly over last year, with barley and oats also above the average, but potatoes show a falling off in some districts. Supplies of native wheat continue to come forward fairly well at the chief distributing centres, and while the maximum price was readily obtainable for millng grades, inferior qualities tended easier. In keeping wth the revised prices of flour, imported wheat will be advanced on Monday next, Manitobas ranging from 103s to 118s, red winters 106s 6d to 115s 6d, hard winters 107s to 116s 6d, mixed winters 106s 6d to 115s, Australian 121s, Argentine 111s 6d, Pacific 117s to 118s 6d, and Manchurian 115s 6d per quarter. Crop reports from most producing countries continue satisfactory. There is a steady demand for flour at regulation rates, the revised official schedule for imported according to grade being in operation next week. Maize dull and weak on the spot owing to the poor consumptive demand. Plate ex ship quoted 68s, and landed 70s. In the forward market more activity was displayed for European sorts, some being offered at comparatively cheaper rates for Plate descriptions. Several cargoes of Dan/Gal/Fox/Bessarabian changed hand, October 66s to 66s 6d, end October 65s 3d, Plate afloat 65s, October 65s 6d to 65s per 480 lbs. English malting barley rules firm for the better qualities, but lower grades slow; useful to fine samples range from 90s to 100s, with slightly more for choice lots. Imported steady. No. 4 Canada Western 70s, Canada feed 67s landed, American malting (48 lbs) 69s ex ship, Plate 70s, Morocco 78s, landed. Danube, ex ship, 67s per quarter. On c.i.f. terms, No. 4 Canada Western November-December sold 62s per 400 lbs. Oats quiet and easier. English winters new grey quoted 58s to 60s, new whites 64s to 68s, black winters 57s to 60s per 336 lbs. Of imported, Plate f.a.q. quoted 50s to 50s 6d, and clipped at 51s, Canadian 63s, Norwegian 66s, landed. On c.i.f. terms, Canadian rather firmer, with sales November-December at 51s 6d, Danubian October-November 45s 6d to 46s, Plate f.a.q. January February 46s per 320 lbs. English beans in fair demand. New winter quoted 82s to 86s; springs 100s to 105s per 532 lbs. Chinese horse, £18 to £18 10s per ton, ex store. Peas quiet and easier. English maples, 100s to 105s; duns, 85s to 87s 6d per 504 lbs. Japanese marrowfats, 31s 6d to 32s 6d cwt. Homeward freight markets ruled quiet for grain, though rates were fairly steady. From American Atlantic seaboard charters were effected at 17s per quarter to Spanish Mediterranean/West Italy, with 1s extra if loading in the Gulf. The River Plate section ruled easier owing to some pressure of spot tonnage, steamers being fixed to U.K./Continent at 95s to 90s October, and 90s December. Eastern markets quietly steady, with Bombay quoted 85s to 90s on dead weight U.K. Australia shows no movement for new season's wheat, with 135s to 140s the nominal value to U.K./Continent. Maize from Beira was fixed at 85s. The Danube ruled quieter following recent liberal charters, and rates are barely so firm, 65s being accepted for maize to U.K./Continent after 67s 6d paid.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown whea during the harvest year 1920-21, contrasted with 1919-20, 1918-19, and 1917-18.—(Particulars of imports of wheat and flour temporarily discontinued):—

	1920-1921.	1919-1920.	1918-1919.	1917-1918.

THE IRON AND COAL TRADES.

Our Sheffield correspondent writes:—The position of the steel trade remains as previously reported. The tool steel branch is experiencing one of the severest spells of depression in its history, as an insignificant quantity of the expensive alloy steels is going out, and there are no orders of any consequence. A moderate amount of business in ordinary carbon steels is reported. The stoppage of the large Templeborough works of Steel, Peech, and Tozer, at Rotherham, is a disquieting incident. A member of the firm has stated that the reasons why it became necessary to discharge more than 1,000 men were, in the first place, no orders were left which could be executed in the Templeborough department. This state of things was attributed to underselling by France and Belgium. Other reasons given were E.P.D., increases of wages, and inability to quote firm prices. The other open-hearth furnaces in the district, however, continue to be fairly well employed, most of them being kept busy by uncompleted contracts. New business is meagre, and the immediate outlook far from satisfactory. As the world needs more steel than is being produced, makers hope to see a revival when some of the present adverse conditions are modified or removed. The iron market is as strong as ever, whether for raw or finished material, and manufactured iron cannot be obtained promptly. Trade is brisk in brass foundry, tools used in many trades, and the rolling mills are full of work. The Board of Trade returns for September indicate a satisfactory volume of exports of local products, particularly hand-tools, wire, and finished steel, which exceeded the pre-war level. The coal market is unsettled again by the miners' ballot against the proposed settlement of their dispute, as it is recognised that the risk of a strike is not over. The demand for all qualties of fuel is in excess of supplies, and reserve stocks are being increased. The house coal demand is also very strong, but merchants have lately been able to reduce the arrears on their order-books. Prices per ton at pits are:—Best South Yorkshire hards, 33s 2d to 33s 8d; best Derbyshire ditto, 32s 8d to 33s 2d; best Tyne steams, 150s to 160s (export); steam nuts and cobbles, 31s 8d to 32s 2d; best hard slacks, 28s 5d to 28s 11d.; small slacks, 23s 2d to 24s 2d; branch, 37s 2d to 37s 8d; best Silkstone, 33s 8d to 34s 8d.

Our Glasgow correspondent (writing on Thursday) says:—Industrially trade is not much, if at all, changed on the week, but the tone of commercial business continues to ease off, and there is

positive evidence here and there that orders are not as plentiful as they were only recently. This is due to a growing feeling amongst intending buyers that quotations for steel and iron materials are more likely to come down than to advance, and that therefore nothing is to be lost by waiting as long as circumstances will permit. However, it is felt that before any reduction in general manufacture and finished connections can take effect the cost of pig-iron must in the first place yield a bit. Of that there is as yet no pronounced sign, though the tendency is favourable. In that respect ironmasters are finding an accumulation of stocks proceeding, though only slightly. On their side, again, these surpluses are permitting of more consideration being paid to export business, which at the moment is very promising and widespread—from nearly all outside markets, barring Continental, with which, at the same time, some trade could be done, if suitable financial arrangements were available. It is patent, therefore, that so long as the make of pig-iron can be readily got rid of values are not likely to be appreciably affected in the interest of consumers. For steel products, especially plates (ship and boiler), demand remains substantially ahead of production, with this significance, that arrears in deliveries are being steadily cleared off. A few orders for merchant steamers have been just given out, and it is reported that inquiries for 100 tankers will soon be on the British market; this in connection with Mexican oil developments. General engineers keep very busy. Machinery makers are particularly active, the bulk of the work in hand being on foreign account—for South America, India, and the Australian colonies. Locomotive engineers have been obliged to slow down—solely from a scarcity of sectional material, which steel-makers cannot turn out owing to their commitments to shipbuilders. Large lots of steel are being discharged in the Clyde from the United States; and Belgium is offering steel and iron bars for delivery here at pounds a ton under local figures. They are also landing lots of basic iron, which is scarce locally; but in none of these relations are Continental sellers inclined to book any length forward. Sewing machine makers, employing very many thousands of workers, are reducing their week to 30 hours, through the collapse of Continental inquiry. But on the whole the general situation is not regarded as unpromising, provided the troubles in the coal trade are adjusted. Fuels have been in good supply this week, but then no export shipments were permitted.

Our Middlesbro' correspondent's report, dated October 14th, is as follows:—Pig iron.—The supply of No. 1 and No. 3 Cleveland pig iron is not sufficient to cover home needs. Prices remain the same, viz., 237s 6d for No. 1 and 225s for No. 3 for home consumption. No. 4 forge may now be exported, but there is not a big demand abroad for this quality. To home consumers No. 4 is quoted 225s, and the export price is 247s 6d. Hematite is not in such keen demand, but the supply still falls short of requirements. Mixed numbers East Coast hematite is quoted 260s for home consumption. Manufactured iron and steel.—New business is not plentiful, as buyers are holding off. Steel ship plates, home, £24 10s; steel ship angles, home, £24; iron ship angles, home, £30 15s; iron bars, home, £30; steel rails, home, £25 net. Iron ore.—Very little business is being done. Best Bilbao Rubio is quoted at 50s per ton.

MANCHESTER, October 14.

We continue to experience a dull market. There have been no indications during the week of buyers being more prepared to operate freely. A further downward movement has taken place in raw cotton rates, and all kinds of yarn and cloth are also cheaper. There is a thorough lack of confidence in current values, with rather increased nervousness with regard to financial matters. Very little of the inquiry met with in piece goods for India has been at all workable, and buying has been confined to sorting-up lots. Bids for China remain scarce. The fluctuations in Eastern exchange rates have been very disturbing. Now and again cheap stock lots have been sold for the minor outlets, but there has not been any general flow of business. More manufacturers have pressed for orders. The yarn market has been weak when tested. Plenty of easy sellers have been about in both American and Egyptian sections. Users as a body have held aloof.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The market remains inactive, and the small amount of business passing in wool, tops, and yarns is quite insufficient to afford any reliable indication to the real position of values. Throughout the trade quotations are merely nominal, and a buyer has no difficulty in obtaining substantial concessions when he has business to offer. There are very wide discrepancies in quotations, and it is significant that tops are being sold at prices much below the cost of making them out of wool bought at the Government auctions. The export trade, both as regards yarns and pieces, is practically at a standstill, on account of the adverse exchanges. It is well known that textiles of all descriptions are badly needed on the Continent, but the question of finance remains the chief stumbling-block. Stocks in this country are rapidly accumulating, and unemployment is increasing. In home-grown wools very little trade is passing, and prices are decidedly in buyers' favour.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

I am glad to note that practically the whole of Australia is at present enjoying a splendid spring season, rain and feed being reported to be plentiful everywhere. Agricultural prospects are said to be excellent, and it is usually the case that the conditions which favour agriculture also benefit the pastoralists. The latter can very well do with a few good seasons to compensate for the serious shrinkage in wool values, and to help to build up the flocks which were decimated by the recent drought. The last lambing returns from New Zealand speak of serious sheep losses, due to several causes, but the remark is added that in all proba-

BRANCHES: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kiukiang, Keelung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World.

The Bank is incorporated by Special Charter of the Imperial Japanese Government, and is authorised to issue its own notes in Formosa, conducts general Banking Exchange Business, undertakes Trust Business, and acts as Business Agents for other Banks. Special facilities are available for Exchange Business on Japan, China, India, Straits Settlements, Dutch East Indies and France, where the Bank has special working arrangements with Cox & Co. (France) Ltd. Deposits are received for fixed periods on terms which may be ascertained on application.

bility the final returns will show very little change compared with the previous returns. When the last mail left a good winter was being experienced; lambs had already made their appearance on many properties, and the outlook appeared to be good.

It is well known that colonial pastoralists are exceedingly disappointed with the course of events in the wool market, the movement of values to a distinctly lower level being sufficient to give rise to serious forebodings. A combination of circumstances has resulted in prices being forced down, but this lower level of values and the losses which it has involved do not constitute the real trouble. Mill-owners everywhere are gravely concerned with the fact that new business has been cut off as with a knife, while the banking up of stocks of pieces, most of which are sold, but which buyers refuse to accept, is giving rise to very serious forebodings. Business does not improve, unemployment increases as the weeks go by, and to all appearance there is nothing to indicate any relief in the immediate future. It is forecasted that when values have touched the bottom it will be the beginning of an improvement, but everybody wants to know what is going to be done with the big stocks of very high priced cloths which confront both wholesale and retail clothiers everywhere.

The news to hand this week from Sydney is fairly encouraging, keen competition being reported and the bulk of the offerings cleared. The quantity of wool catalogued is by no means great, and there should be no difficulty in clearing about 3,000 bales daily. I take it that only really good wools are being offered to-day, and know of considerable orders being out in Sydney for merinos waiting for an opportunity to buy to make a good 64's top at 5s. There seems to be no increased demand for wool among the home trade; apart from the export of crossbred tops to Germany by Bradford users trade shows not the least sign of improvement, and, to say the least, the outlook might be much better than it is.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

A heavy fall in the value of linseed has taken place, not perhaps altogether unexpected, and in some respects inevitable, taking into consideration the large world supplies available and the comparative failure of the demand for the oil product. Holders realising this have hastened to dispose of their holdings, and the result is that sellers exceed buyers, and prices have dropped several pounds per ton, particularly for shipment. Spot prices are fairly steady in view of the small stocks and not too great quantities afloat, but for shipment the position is easier, and there are numerous sellers of Plate to Hull at £32 10s for October-November, and £32 November-December, with new crop dealt in at £32 for January-February. Down to £36 has been accepted for Calcutta on passage to London, and sellers round £37 for Bombay for shipment. The favourable weather reports from Argentina have assisted to demoralise the market, which does not appear likely to recover in a hurry.

In sympathy with the seed, linseed oil has slumped badly, and on Tuesday at Hull was down to £71 10s for raw, ex mill, prompt, with £70 10s quoted for November-December, and £68 15s for January-April. Spot oil thus practically approximated to the lowest figure previously recorded this year, and over £50 below the highest. The reduced prices have not yet stimulated demand, consumers' requirements being small on account of bad trade and the unsettled outlook.

Cotton-seed is easier for both Egyptian and Indian on spot and for shipment, and the oil product has followed suit, and has shown a marked decline since the opening this week.

The arrivals of oilseeds, &c., in the United Kingdom in September aggregated only 75,019 tons, against 211,337 tons in September last year, and comparing with an average of 112,761 tons for the preceding eight months of this year, the principal falling off being in linseed. The total for the nine months January-September is 997,105 tons, against 1,103,021 tons in the same period of last year and 1,147,693 tons in January-September of 1913. Linseed imports were only 260,270 tons, against 400,314 tons last year. Oilnuts and kernels were slightly in excess of a year ago, and cotton 78,000 tons in excess, but practically all other kinds showed a decline.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The depression in the leather trade was again reflected in Thursday's hide market in Bermondsey; best ox dropped to 12d-12½d, an average fall of ⅛d. Second ox, cows, and kips were all lower, dropping ½d-⅝d. Calf were again weaker, heavies making 9½d and light classes 16d-16¾d, which means declines of ¼d-1⅜d. Best wools made 10s 2d each, and best hoggs 11s 8d.

The foreign hide market is still very quiet, as tanners are trying to bring prices down in view of the lower values of leather. The River Plate market is also depressed, with America and England taking little interest in the position. Cables from the U.S.A. report the packer hide market as weak, with native steers now offering at 25 cents. Indian hides and skins are also quiet, with holders making concessions to do business.

The excitement of the Shoe and Leather Fair is now over, and business has settled down into its quiet groove. Opinions differ as to the amount of business done, but it is certain that what leather was sold was on a basis of much lower prices. Tanners are to some extent accepting the inevitable, and to-day a good class sole bend can be bought round about 4s per lb. Offal is a poor seller, and all sorts of stories are to be heard of heavy cuts in prices to clear tanners' heavy stocks.

Upper leather is still selling badly; parcels of box calf have been selling of late well under cost of production, and some of the men who during the war greatly increased production are now very sorry for themselves. Glacé kid is wanted in the best grades, but tanners are right up against foreign competition, and I hear a meeting on the subject is to be held this week with the Board of Trade officials.

Shoe manufacturers are still very short of orders, and are also cutting their losses on certain grades. Rumours are current of large Continental orders, but in view of the stories circulated by a section of the Press one has to take this sort of thing with a grain of salt.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, October 15.

Quietness was the predominant feature in the various markets during the week, demand, particularly on export account, showing no signs of increase, while the question of rates of exchange still weighs heavily. Amongst Indian commodities to be markedly affected is that of jute, and any firm features attaching to the intrinsic value of the article were quite overshadowed by movements of the exchange rate. A steady crumbling of the latter brought down prices of both raw jute and manufactures with a run, though a reaction set in so soon as the exchange showed an improvement.

SUGAR.—The market for free parcels remained in a generally dull and uninteresting state, and limited transactions include American granulated at 116s; white Mauritius, 113s; crystallised West India, 98s to 103s; with muscovado, 69s to 75s. American syrup still very neglected. Honey quiet. Liquid glucose, spot, 52s.

COFFEE continued very quiet, home-trade buyers picking out one or two lots, while export demand is more or less dormant under present rates of exchange with near Continental importing countries. Fair quantities brought to auction were only partially disposed of. Terminal market remained dull. December sold, 54s.

COCOA.—There is no improvement to note in this market, business being very restricted both on home and export account. Trend of values is easy.

TEA.—During the week extensive quantities were offered in auction, amounting to 50,300 packages Indian and 35,600 packages Ceylon. Fair competition prevailed for all qualities possessing flavour and character, but common and medium descriptions were quiet, while irregular in price.

RICE.—Very quiet, with only limited sales at fixed rates. Bran dull. Rangoon beans and also Japanese peas sold quietly.

SPICE.—Pepper ruled flat this week. Fair black Singapore, spot, sold, 6½d; October-December, 6⅝d; Lampong, spot, 6½d; Aleppy, 7d; Tellicherry, 7½d; white Singapore, 1s 2½d; October-December, 1s; Muntok, spot, done, 1s 3½d; October-December, 1s 0½d to 1s 0¼d. Zanzibar cloves, spot, sold, 1s 7½d; pimento, sellers, 4d. Tapioca quiet. Fair flake, spot, sold, 2⅛d; ditto, October-December, 21s 6d; fair Penang seed, spot, 25s 6d; October-December, 24s 6d; small sago, October-December, 31s; sago flour, October-December, sold, 21s to 20s 6d; farina, October-December, done, 28s to 27s. Ginger steady, but general trade quiet. Desiccated coconut, fine cut, spot, sold, 85s to 84s; medium, 90s to 89s; half-and-half, October-December, 78s.

JUTE.—The market opened the week very flat, owing to a further drop in rate of exchange; but on some improvement taking place therein, prices for jute became steadier. Generally speaking, the market is sensitive. Native first marks assortment, October-November actuals, sold from £48 to £50; subs, £45 to £47; Daisee, No. 2, £44 to £46 for actuals; lightning actuals, October-November, £36 to £38; subs, £34 to £36, and old subs, to Hamburg, at £33 to £34 10s. Calcutta hessians and also twills, after a sharp slump, became steadier. 10 oz, November-December, sold, 40s 6d to 46s; October, 45s 6d; 8 oz, spot, 40s; November-December, sold, 33s to 37s. A twills, November-December, done, 110s to 112s; B, spot, 106s to 112s; ditto, November-December, 95s to 100s; salts, November-December, done, 78s to 85s.

HEMP.—Manila ruled steady on limited offers from shippers, but spinners do not accord much support at the moment. J grade October-December, sold, £68 to £67; K, August-October, sellers, £58; L, £57 10s; and M, £47. New Zealand hardened on buyers showing

After 5 years the Premiums under this scheme are subject to FURTHER REDUCTION in respect of any abatement declared in excess of 33 per cent.

NO COMMISSION. NO SHAREHOLDERS.

Office: 13, Moorgate Street, London, E.C.2.

(*Continued from page* 612.)

more desire to operate, but closed with a quieter tone. High points, October-December, sold, £56; and fair, at £52 10s to £53 10s. Italian very quiet in the London market, and largely nominal.

SHELLAC.—General course of trade ruled quiet. Standard free T.N., spot, 640s; October T.N., sold, 590s; and December, 560s to 555s.

COPRA.—Market suffered a very sharp slump, on cessation of Continental demand and heavy selling pressure on the part of second-hand holders. F.M.S. Straits, October-December, London, sold down to £52 10s; ditto, to Rotterdam, down to £54 10s. Ceylon, October-December, London, sold, £54 10s and £55; and F.M. Straits, to Marseilles, at £53 15s. Palm kernels also declined sharply, down to £34 being accepted for October-December.

MENTHOL.—Kob-Suz, spot, sold, 28s; peppermint oil, ditto, 6s 6d; aniseed, 4s; slab camphor, 6s 6d for refined, and China, crude, spot and forward, 3s 6d. Japanese wax, spot, sold, 115s.

EGG PRODUCTS.—Market very quiet and somewhat nominal. Liquid yolk, spot, old season's, 90s; new, 110s; November-January, 92s 6d. Liquid whole egg, spot, 85s per cwt. Dried yolk, spot, 9d; native dried whole egg, spot, 10d; spray, 1s 6d. Albumen, spot, 4s 9½d; and November-January, 4s 7½d per lb.

RUBBER.—More steadiness governed the market this week, though slight irregularity was in attendance at times. Plantation crepe, spot, sold, 1s 6½d; November-December, 1s 7d to 1s 6¾d and 1s 7d; January-March, 1s 7¾d to 1s 8d and 1s 7¾d; January-June, 1s 8¾d to 1s 8½d. Sheet, spot, sold, 1s 3½d to 1s 3¼d and 1s 4d; November-December, 1s 4d to 1s 3¾d and 1s 4½d; January-March, 1s 6d to 1s 5¾d, 1s 6¼d. Fine hard Para, spot, 1s 6½d per lb.

OILS. — Linseed flat. Spot, net, naked, 67s; November-December, 63s 6d. Rape quiet. Crude, spot, 74s; refined 85s. Cotton easier. Crude Egyptian, 65s; Bombay, 55s; refined edible, 91s. China wood quiet. Hankow, spot (barrels), 108s; and Hong Kong, spot, 105s. Palm kernel quiet. Crushed, spot, 80s; extracted, 79s. Coconut quieter. Ceylon, spot, sold, 91s; September-November, 90s; Cochin, ditto, 93s. Soya quiet. Oriental, afloat, 69s; October-December, 68s; deodorised, 90s. Japan fish quiet. September-November (cases), 40s. Cod liver dull. English, spot, 44s. Groundnut quiet. English crushed, naked, spot, 83s; deodorised (barrels), 100s. Turpentine easier. American, spot, 121s; November-December, 122s; January-April, 123s 6d. Rosin quiet. American, grade B, 46s; F, 49s; G, 49s; K, 51s; M, 52s; WW, 54s; French, F/G, 45s 6d; H, 45s 6d; WW, 47s; extra pale, 48s. Petroleum easier. American, spot, 2s 3¼d; and water white, 2s 4¼d per gallon.

OILSEEDS.—Linseed: market flat. Calcutta, afloat, £35 10s. September-October, £35; Bombay, September-October, £36. Plate, afloat, Hull, £33; September-October sold, £33 to £32; January-February, new crop, £32 to £30. Rapeseed easier. Toria, September-October, Antwerp, £34 10s; real bold Ferozepore, £33 10s; brown Cawnpore, £30 10s. Cottonseed dull. London Egyptian, f.a.q., September-October, £18. Bombay, spot, Hull, £13; September-October, at £13. Gingelly steady. Chinese, afloat, to Continent, sellers, £49. Groundnuts quiet. Coromandel, October-November, £38.

METALS.—Tin, on free selling, moved in a downward direction until the middle of the week, cash fluctuating to £255 10s, and three months to £260. Thursday's movements exhibited a further relapse, cash being registered at £253 to £249; three months, £260 to £255. Copper: The standard market tended rather lower until Tuesday last, under fairly liberal offerings, cash declining to £96, with three months to £93 10s; but better support was accorded by the middle of the week, chiefly respecting cash, which reached £96 10s, and three months, £95. Values declined at Thursday's market on realisations, while the above positions sold down to £93 10s and £91 5s respectively. Lead slightly better at £34 5s. Spelter quiet at £40 to £41 5s. Antimony: English, Regulus, ordinary to best, £52 to £55. Aluminium: Home trade, £165; export, £185. Wire bars quoted at £111 to £113.

TALLOW.—Messrs Colchesters and Woolner write on October 13th as follows:—The tallow market was quiet during the week, and prices were mostly 2s lower to-day. There has been a pause in the demand, buyers anticipating an easier tendency, in sympathy with other markets. At auction to-day 2,395 casks tallow were offered, and 405 were sold. Quotations are:—Australian mutton: Fine, 80s; good to fair, 76s to 73s; dull to dark, 66s to 60s; hard, 76s. Australian beef: Fine, 86s 6d; good to fair, 73s to 68s; dull to dark, 65s to 60s; sweet, 89s 6d. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 75s; and mixed, 43½, c.i.f., London, 73s 6d. The market letter is lower, tallow 3s, stuff 2s. Town tallow, 63s per cwt. Rough fat per 8 lbs, 6½d to 1s 2½d; melted stuff, 49s per cwt. Quotations are:—Town: 60s net cash, naked, ex works. Country: Frail casks, 56s; home melted, shipping casks, net, f.o.b., good coloured, none; fair to dull, 62s to 58s. Bone fat: White, none; pale, 60s; benzine, 54s; melted stuff, 55s, f.o.b.

The Anglo-South American Bank, Limited

EXTRACT FROM REPORT OF THE DIRECTORS

To be presented to the Shareholders at the Thirty-second Annual General Meeting, to be held at Winchester House, Old Broad Street, London, E.C., on Wednesday, the 20th October, 1920, at 2 o clock p.m.

The Directors herewith submit to the Shareholders the Report and Audited Accounts to 30th June, 1920.

The net profit, after making provision for all charges, rebate, &c., amounts to £1,024,156 0s. 5d., which, together with £241,619 6s. 10d. brought forward, makes a total of £1,265,775 7s. 3d., of which £262,500 was absorbed by the Interim Dividends paid on the 30th April last. There is now an available balance of £1,003,275 7s. 3d., of which the Directors recommend that

£ s. d.	
227,714 15 2	be applied to the payment of a Final Dividend of 9s. per Share, less Income Tax, on 722,904 old Shares,
37,843 15 0	be applied to the payment of a Final Dividend of 7s. 2½d. per Share, less Income Tax, on 150,000 new Shares issued in October, 1919 (being *pro rata* on Capital paid up or due to 1st May, 1920), both being payable on the 27th October,
	(The foregoing dividends make a total distribution for the year of 15 per cent., in addition to which a Special Interim Dividend of 10s. per Share on the old Shares and 1s. 3d. on the new, both less Income Tax, was paid April 30th last.)
58,600 7 6	be applied in payment of the expenses in connection with the acquisition of the Shares of the British Bank of South America, Limited,
50,000 0 0	be added to the Investments Reserve Fund in order to provide for depreciation of securities,
136,000 0 0	be added to the Reserve Fund, which now amounts to £3,850,000 including premiums received on New Issues,
25,000 0 0	be added to the Staff Pension and Guarantee Fund,
75,000 0 0	be applied in payment of a Bonus to the Staff, and that the balance of
393,116 9 7	be carried forward.
£1,003,275 7 3	

BALANCE SHEET at 30th June, 1920.

NOTES.—

The difference between the Assets and Liabilities in Chili is taken at the rate of Exchange current at the date of the accounts, viz., 13 1/16d., with the exception of such portion as represents the Capital employed in Chili, which is now taken at 18d.

The Special Reserve of £183,826 12s. 11d. is sufficient to write this Capital down to 10d. per dollar.

Out of the above Assets £714,726 11s. 3d. have been lodged :—

As Guarantee to the Chilian Government for due payment of Drafts issued for Duties	£277,072 12 0
For other purposes (amount of lien)	437,653 19 3
	£714,726 11 3

ROBERT J. HOSE,
ROBERT HARVEY,
ED. BUNGE,
Directors.

W. E. WELLS, *General Manager.*

W. S. SMEE,
Chief Accountant.

We report to the Shareholders that we have audited the above Balance Sheet, dated 30th June, 1920, with the Books at the Head Office (London), and have obtained all the information and explanations we have required.

We have examined the Returns from the Branches certified by the respective Managers, and have satisfied ourselves that they are properly incorporated in the above account.

We further report that, in our opinion, the above Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Head Office and the above-mentioned Returns.

The Investments (after allowing for the Investments Reserve Account) are taken at market prices, where available, and other investments at estimated values at 30th June, 1920.

LONDON, 28th *September*, 1920.

We have examined the books and accounts of the International Banking Corporation at its Head Office, New York, London, and San Francisco Branches, as at June 30, 1920, and have inspected the certified returns from all other branches. We have satisfied ourselves that proper provision has been made for doubtful debts and for all ascertainable liabilities, and certify that in our opinion the above Balance Sheet is properly drawn up so as to show the true financial position of the Corporation at June 30, 1920.

THE MONEY MARKET.

THE actual beginning of the coal strike, with its inevitably disastrous effects on the country's industry and welfare, affected the money market by reducing the demand for credit, owing to the check that it imposes on all kinds of business, and at the same time making short commitments preferable. Day-to-day money was thus very plentiful, at rates ranging down to 4 per cent. Discount rates, however, after being easy in tendency, hardened again as the week went on, except for very short paper, since the obvious reactions of the strike on industry did not encourage buyers of bills to take commercial paper at

a minute fraction above Treasury bills. An attempt by the Federation of British Industries to reform the official scheme for granting export credits aroused some interest, but was generally regarded as a forlorn hope. Difficulties that have arisen in the financing of British exports to Australia led to the dispatch of a cable by the London Chamber of Commerce to the Association of Chambers of Commerce in Australia, asking them to urge the Commonwealth Government to permit gold exports, but the Government appears to be disinclined to do so. The difficulty appears to have arisen partly owing to the general scarcity of credit and uncertainty of trade, but chiefly owing to the dislocation of financial facilities owing to official control in the wool trade. The business world is heartily sick of controls and their troublesome reactions, and Mr Runciman made a very effective case against them at a luncheon last Thursday, at which he was the guest of the National Association of Merchants and Manufacturers. The worst example perhaps of the effects of official control is the present coal strike.

The Bank return showed decreases of £6,000 in the stock of gold, and of £700,000 in the note circulation, and a consequent increase of £64,000 in the Reserve. A decrease of two millions in the Government securities was balanced by a similar increase in the Other securities. Public deposits declined by £1,662,000, and Other rose by £1,874,000. The circulation of currency notes was reduced by £573,000 to £355,903,600, which includes £3,109,000 for notes called in, but not yet cancelled. The fiduciary issue is now £305,544,600, or £15,055,400 below the maximum.

* * * *

The following table shows Public Income and Expenditure for the week ended October 16, 1920 :—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	36·112	Supply Services	5·100
Less—		Interest on Debt.....	3·903
From Exchequer Balances ..... Mln. £ 1·279		Sundries	·431
Reduction of Debt.. 25·399			
	26·678		
	9·434		9·434

These operations reduced debt by a sum of £25,399,177, and caused the following changes, which are reflected in our table of National Debt given in another column :—

	Mln. £		Mln. £
Bank of England Advances	+ 3·000	Treasury Bills	— 5·974
Public Departs. Advances	+ 33·250	American Loan	— 55·000
Treasury Bonds..	+ ·165	Surrenders of Bonds, &c.....	— 1·270
National Savings Certificates	+ ·250	Depreciation Fund.....	— ·500
Sundries	+ ·680		
	+ 37·345		— 62·744

The principal item of revenue during the week was £19,800,000 from special receipts under Miscellaneous. Customs and Excise yielded £6,434,000, Property and Income-tax brought in £3,623,000, and Excess Profits duties yielded £4,036,000. The floating debt was increased by £30,415,000 during the week. Repayment of American Loan, which stood in our National Debt table at £51,000,000, has so far taken £55,000,000.

* * * *

As was to be expected, the foreign exchange market has been disturbed and irregular, owing to the coal strike. A strongly adverse movement set in on Friday last, and though there was some recovery towards the middle of the week, the ultimatum of the railway men again turned rates against us. New York, which fell from 3.50 on the 14th to 3.46¾ on the 15th, went at one time as low as 3.40, and was yesterday quoted at 3.44½d. Amsterdam, after going down to 11.10, was yesterday 11.20, as against 11.24 a week ago. Switzerland, after going down to 21.65, was 21.79, as compared with 21.85 a week ago. Stockholm, which fell heavily on the 15th to 17.62, and went as low as 17.31 on Tuesday, recovered yesterday to the same figure as a week ago. Copenhagen, however, at 24.85, and Christiania at 25.12, were each about 15 ore lower than the previous week. Among the neutral exchanges, Madrid alone, for reasons which are not yet apparent, showed the opposite movement, the peseta rate, which was 24.17½ on the 15th, and fell as low as 24.08 on the 19th, having risen again yesterday to 24.30. Both Paris and Brussels have followed the general market fluctuations, French francs being yesterday 53.10, as compared with 53.26 a week ago, and Belgian 50.20, as compared with 50.57½. As will be seen, the spread between the two capitals has again widened. Italy, on the other hand, with even more serious labour troubles of its own, and with the threatened catastrophe of the cutting off of its meagre coal supplies, has seen a further fall in the value of its currency, the lira being quoted yesterday at 91, as compared with about 88.50 a week ago. Berlin, too, has gained little from our troubles, the mark at 243 being only one point lower than a week ago, while Vienna at about 1,000 showed a rise of about 40 kronen on the week. For futures both the New York and the Paris rates have widened, the former being about 1½-2¼ cents per month above spot, the latter about 27-32 centimes below. Brussels remains the same at 30-35 centimes per month below spot, Berlin is ¼-¾ below, Amsterdam par to ½ point below. During the earlier part of the week the downward movement of silver continued to a bottom price of 50½d on the 19th. Since then there has been some reaction, but none of the adverse factors have been removed, and there is no reason why this recovery should be considered as other than temporary. Shanghai at 5s 3d was 1d lower on the week, and the rupee unchanged at 1s 7⅜d.

EVENTS OF THE WEEK.

OCTOBER 16TH.—Coal strike begins. Coal, gas, and electricity supplies regulated by Board of Trade. Conference of Societies of League of Nations at Milan concluded. Anglo-French loan repaid.

OCTOBER 18TH.—Bread prices increased. Report of Committee on Currency and Exchange at Brussels Conference published. Unemployed procession to Downing street. Riots in Whitehall. Letter from Oxford professors to German and Austrian professors published.

OCTOBER 19TH.—Parliament reassembles. Coal strike debate.

OCTOBER 20TH.—Debate on reprisals in Ireland. Reduction of railway and steamship services announced.

OCTOBER 21ST.—" Conversations " between Government and miners' leaders. N.U.R. threatens to strike. Prime Minister makes statement on labour crisis. Debate on unemployment.

OCTOBER 22ND.—Miners' executive invited to confer with N.U.R. Danish loan in America for $25 millions announced.

THE STRIKE SETTLEMENT: A SUGGESTION.

THERE are two kinds of strikes—the one from below and the one from above. And the strike from below, that which owes its impetus to the rank and file, is much more difficult to settle than the strike from above—that which is due to the advice issued to men by their accredited leaders. The coal strike is a strike from below, a rank and file movement. The leaders did not call the men out, and they have no power to send the men back to work. The men are out by their own will declared in the ballot of August last; they will not go back until by another ballot they approve of a settlement recommended to them by their leaders. It is important to bear this in mind. The country cries out for a quick settlement, but there cannot be a quick settlement unless a compromise or concession—call it what you will—agreed to by the Government and the miners' leaders is of a nature to make an instantly favourable appeal to the men.

At the moment of writing the outlook for such an acceptable compromise or concession is not very bright. The miners are plainly resolved upon remaining out of the pits until their demand for an unconditional advance of 2s a shift (about 10s a week) be conceded. The Government is as plainly resolved not to grant the advance demanded unless satisfactory guarantees of increased output be given by the miners in return. Leaders of the quality of Mr Brace and Mr Hartshorn are fully alive to the necessity of an increased output if the country is to remain in the first industrial rank. But Mr Brace and Mr Hartshorn, and all the rest of the leaders added unto them, cannot give those guarantees of increased output upon which the Government insists. The miners, the rank and file, can give them in so far as their own work is concerned, but they cannot make themselves responsible for the actions or inactions of the coal owners and mine managers. That was one reason why the datum line proposal failed to secure support. It would, therefore, appear that the condition insisted upon by the Government—that the advance in wages should be contingent upon guarantees of increased output—cannot be made acceptable to the miners. There is no prospect of a settlement along this road: it is a *cul-de-sac.*

We are thrown back upon the first and best offer made by the Government, namely, that the claim for an advance of 2s a shift should be referred to an impartial tribunal. No plausible reason has been given for refusing that offer, and no ballot stands in the way of its acceptance. Yet we are told that progress upon that road also is hopeless: it is another *cul-de-sac.* If we wait until the miners' leaders accept the offer of an impartial tribunal we shall do nothing and the strike will drag its slow, devastating length along. It is vain to expect or hope for acceptance, but that is no reason why, for the guidance of the public, which is the first and last sufferer by the strike, the impartial tribunal should not be immediately set up.

This is our suggestion. The Executive Government is a principal party in the dispute. No tribunal which it set up could now be acceptable to the miners, or be regarded by them as impartial. But Parliament is not a party to the dispute. We suggest that the Speaker and the Lord Chancellor, by consent of their Houses, should nominate at once a small committee of Lords and Commons (of which the members would be in no way connected with either the Executive Government or the Labour Party) to investigate the justice of the miners' wage claim. Let that Committee take evidence from the Coal Mines Department, the coal owners, and the Miners' Federation. We do not suppose that the Federation would decline to give evidence, though it would be clearly understood that they were not accepting in advance the verdict of the Committee. This Committee could easily take evidence, consider and issue their report within 48 hours. The dispute is a simple one. There are two points only to be determined. First, was the Sankey Wage given to raise the miners' standard of living, and was it apart altogether from compensation for the rise in the cost of living? Secondly, by how much has the cost of living advanced since March last? The first question is the principal one, for it is the chief cause of the difference between the Government and the Miners' Federation. The Committee which we have suggested could give authoritative replies to both questions within 48 hours.

It may be asked what purpose would be served? To us it seems that the report of this Committee would place the whole dispute upon a new plane. If the Committee decided that the miners were in justice entitled to the 2s per shift, the strike would be over. The Government would then be compelled by public opinion to grant the advance. If, on the other hand, the Committee decided that 1s or 1s 6d per shift was the proper advance, then the Government could offer that amount at once in settlement of the dispute. If the miners then refused to return to work, they would have public opinion—of their own class and of all other classes—dead against them. They would be Ishmails. No body of men could continue under such circumstances to hold together and to defy public opinion. Their case would have been tried and lost.

We cannot see how this obdurate 2s claim is to be disposed of except by a means such as we suggest. Once it be got out of the way then effect might be given to the admirable proposals of Mr Brace. A " victory " for either side after a long drawn-out battle of starvation would be as bad for either side as a defeat. It would then be hopeless to expect any working agreement between the miners and the mineowners to improve coal output. But if we could have a judicial verdict upon the wage claim, and a speedy settlement of that claim, the way would be open for negotiations to set up a National Wages Board and to determine in what proportions the profits on exported coal should be apportioned to miners, coalowners, and to the national Exchequer. Human nature being what it is, we shall not get increased output unless both miners and coalowners have inducements offered to them.

That is our suggestion. It offers a possibility of a quick settlement, and no other is of much use. As day follows day more men are thrown out of work for lack of coal to maintain industry. If the strike runs into weeks, the number of unemployed will run into millions. The Government's scheme for providing work upon hous-

ing and new arterial roads—by collaboration with local authorities—will not absorb to any material extent the men thrown out by the strike. It has been designed to meet the normal, rather than the abnormal, problem of unemployment this winter. No temporary measures can meet the circumstances of the men thrown out by the strike. We shall be driven to adopt a vast costly demoralising system of doles, for no Government, no social system, can exist whilst millions of able-bodied men tramp starving about the streets.

INTERNATIONAL CREDITS: THE TER MEULEN SCHEME.

THE one concrete proposal recommended by the Brussels Conference was that submitted by the Dutch Banker, M ter Meulen, of Hope and Co. We subjoin in full the outline of the scheme as given in the annex to the resolutions adopted by the Conference :—

1. In order that impoverished nations, which under present circumstances are unable to obtain accommodation on reasonable terms in the open market, may be able to command the confidence necessary to attract funds for the financing of their essential imports, an International Commission shall be constituted under the auspices of the League of Nations. 2. The Commission shall consist of bankers and business men of international repute, appointed by the Council of the League of Nations. 3. The Commission shall have the power to appoint sub-commissions, and to devolve upon them the exercise of its authority in participating countries or in groups of participating countries. 4. The Governments of countries desiring to participate shall notify to the Commission what specific assets they are prepared to assign as security for commercial credits to be granted by the nationals of exporting countries. 5. The Commission, after examination of these assets, shall of its own authority determine the gold value of the credits which it would approve against the security of these assets. 6. The participating Government shall then be authorised to prepare bonds to the gold value approved by the Commission, each in one specific currency to be determined on the issue of the bond. 7. The date of maturity and the rate of interest to be borne by these bonds shall be determined by the participating Government in agreement with the Commission. 8. The service of these bonds shall be secured out of the revenue of the assigned assets.

9. The assigned assets shall, in the first instance, be administered by the participating Government or by the International Commission as that Commission may in each case determine. 10. The Commission shall at any time have the right of making direct representations to the Council of the League of Nations as to the desirability of transferring the administration of the assigned assets from the participating Government to the Commission. 11. The decision of the Council of the League of Nations on this question shall be binding.

12. After the preparation of these bonds, the participating Government shall have the right to loan the bonds to its own nationals for use by them as collateral security for importations. 13. The bonds shall be made out in such currencies and in such denominations as are applicable to the particular transaction in respect of which they are issued. 14 The participating Government shall be free to take or not to take security for the loan of these bonds from the nationals to whom they are lent. 15. The maturity and the rate of interest of the loan of the bonds shall be fixed by agreement between the participating Government and the borrower of the bonds; they need not be the same as the maturity and the rate of interest of the bonds themselves.

16. When making application to his Government for a loan of these bonds, the importer must furnish proof that he has previously obtained from the International Commission express permission to enter into the transaction for which the bonds are to be given as collateral. 17. Each bond, before it is handed over by the participating Government to the importer, shall be countersigned by the Commission in proof of registration. 18. Having obtained the consent of the Commission and received from them the counter-signed bonds, the importer will pledge these bonds to the exporter in a foreign country for the period of the transaction. 19. The exporter will return to him on their due dates the coupons of the pledged bonds, and the bonds themselves on the completion of the transaction. 20. On receipt of the coupons and the bonds respectively, the importer will return them to his Government. 21. Bonds returned to the participating Government shall be cancelled, and may subsequently be replaced by other bonds, either in the same or in a different currency, up to an equivalent amount. 22. The exporter, or if he has pledged the bonds the institution with which he has repledged them, acting on his behalf, would be free, in the event of the importer not fulfilling the terms of his contract, to hold until maturity the bonds given as collateral by the importer, or to sell them in accordance with the custom in his country in case of default. 23. In the second alternative an option of repurchasing the bonds direct must first be given for a short period to the Government which issued them. 24. If a sale is resorted to and results in a surplus beyond what is necessary to cover the claims of the exporter upon the importer, the exporter shall be held accountable for that surplus to the Government which issues the bonds.

25. The revenues from the assigned assets shall be applied as follows, to the service of the bonds. 26. Out of these revenues, the Commission or the participating Government, as the case may be, shall purchase foreign currencies sufficient to meet at their due date the coupons on all bonds at any time outstanding in the different foreign currencies. 27. In additon, they shall establish abroad in the appropriate currencies a sinking fund calculated to redeem at maturity 10 per cent. of the bonds outstanding in each of the different countries. 28. Further, in addition to the amounts provided for payment of coupons and for the endowment of the sinking fund, they shall establish out of the assigned revenues a special reserve in one or more foreign currencies for the redemption of bonds sold in accordance with paragraph 22. 29. The amount to be set aside for the special reserve shall in each case be determined by the Commission. 30. Any surplus remaining at the end of each year after the provision of these services shall be at the free disposal of the participating Government.

31. A participating Government shall have the right to offer its own bonds as collateral for credits obtained for the purpose of importations on Government account. The previous assent of the Commission will in these cases also be required for the particular importations desired by the participating Government. 32. If a participating Government, which has been in control of its assigned revenues, should fail to fulfil its obligations, the exporter concerned will notify the Commission, and the Commission will apply to the Council of the League of Nations for the transfer of the management of the assigned revenues to the Commission.

33. The consent of the Commission is necessary whenever bonds secured on the assigned assets are given as collateral, and shall as a rule be accorded only for the import of raw materials and primary necessities. 34. The Commission may, however, at its discretion, sanction in advance the importation of specified quantities of such goods. 35. Even in the case of imports under such a general sanction a notification of the particular transaction must be registered with the Commission. 36. The assent of the Commission must also be obtained in every case to the term of the credit which it is proposed to open.

Much work will have to be done by the committee of bankers and business men which is to be appointed in the first instance in order to produce a working programme, and the scheme itself will probably undergo considerable modification during this process. It is well, too, to realise its definite limitations. No help is provided under the ter Meulen plan for two classes of states, those who are too rich to need or too proud to submit to the administration of their public assets, and those who in practice have no assets available, either through the prior charge of reparation or through absolute poverty. For the first class, the normal forms of commercial credit will have to suffice. For the second, there is the assistance provided under the International Relief Credits Organisation. For countries between these two classes, in particular for new countries which for one or another reason do not

inspire the foreign trader with the confidence which they deserve or may very soon deserve, the proposal gives some promise of assistance. An exporter who would not think of granting credit on the security of the merchant alone, or even of his Government, might be more ready to do so on the strength of securities based on assets administered by an international board; but a very considerable margin over the value of the goods sold will clearly be necessary to cover him against possible loss. If the participating Government chose to repudiate the whole transaction, a bond secured on its customs, or mineral or other wealth, would not be worth much; and it is most undesirable that the League of Nations should run the risk of having to coerce recalcitrant debtors. Another serious obstacle to the success of the scheme is the sensitiveness of the new countries, asked to surrender part of their recently acquired independence; but if once the scheme is adopted in one or two instances it is certain that importers in other countries will put pressure on their own Governments to give their adhesion.

HOUSING AND RENTS.

After two years of effort, with all the resources of the country at its disposal, 10,000 houses have been produced under Government schemes, against revised estimates of 100,000 houses with maturity dates long past. This is the result. Now let us consider the cost.

The present housing muddle may be separated into two headings: (1) provision of new houses; and (2) better economical use of existing accommodation.

In July, 1914, the supply of new housing was adequate for all needs. Speculative builders were busy providing houses at small margins over cost. They were willing to sell houses or rent them as long as a 5 per cent. return could be assured on capital. To-day speculative builders are practically out of business. Few men are building houses, and certainly no one is building for renting purposes. Houses can only be purchased, and letting new houses as a form of investment belongs to the history of the past. What has brought about this change? Briefly—official control. The Rent Restrictions Acts were to be for the duration of the war. Faith was broken, and they were extended. But after awhile the State found that housing was a complicated business. Private enterprise, at first treated with contempt, was to be brought in, and a fly was cast on the water to attract private housing finance. New houses would be placed outside the Rent Restrictions Acts, and owners could charge any rent they pleased. But investors were not to be so easily caught the second time. Rents on most existing property would be increased 30 per cent. only, and it would be little use to ask the full economic rent of £127 a year when possibly in the same road similar houses were letting at £60, of which possession could be obtained by devious unlawful methods. These figures are based on a house costing £525 to build in 1914.

At first it was stated that full economic rents would not be charged by local authorities for their new houses. But now that some authorities have had a little experience of finance, housing, and tenants, different views are prevailing. We are told that full economic rents may be charged. What truth there is, however, in this latter statement it is difficult to discover. From figures recently given out at Liverpool, this would appear to be not the case. If new houses are to be let at 12s a week in this district, exclusive of rates, it is quite obvious that the balance of rent will have to be made up by the taxpayer. On the other hand, if, as it is suggested, ex-soldiers will have preference for new houses throughout the country, it would appear equally absurd to make these men pay full economic rents while men who never gave up their homes shelter behind the Rent Acts and obtain housing under current value.

It is, however, when we come to an examination of waste of existing housing accommodation as a result of Government control that the effects of the Rent Restrictions Acts appear at their worst. The present artificially restricted rents exercise but little economic pressure on occupiers to sublet portions of their houses. In normal times it may be desirable for occupiers to enjoy ample housing space. In the present abnormal situation the accommodation hoarder is encouraged by having housing supplied under cost of production. Hoarders are usually automatically checked by having to pay full values on rising markets. But here no such economic process is at work. Equally illogical is the position of persons compelled to purchase houses through the action of the rent control which debars houses from being let. Houses costing £500 to build in 1914 now sell for about £1,300. The rent, say, is approximately £45 a year. At 7 per cent. the cost for interest is £91 a year, ground rent £8 and provision for repairs £20, absorb a total of £119. Possibly occupiers decide to sub-let a part of the house. The maximum legal rent is £60. For half the house the legal rent would be £30. In other words, occupiers are permitted to let property at £30 which cost over £59 per year. Is it any wonder that the rent control is evaded by all sorts of cunning subterfuges. Take another instance. The net rent of a small villa, which before the war was 9s a week, is now 12s. The full economic rent would be between 25s and 30s. Occupiers of these houses, as a rule, have been able to increase their income, probably more in accordance with the cost of living than most other classes. Many have got rid of their lodgers, and for the first time enjoy the luxury of a house to themselves. In other cases tenants enter into bargains with sub-tenants, and set the law at open defiance. Owners of this class of property are not greatly concerned. Possession of these houses have little attraction for them, as people seldom buy these small places with the object of occupation.

The Government should abolish all rent restriction next year. For these restrictions are irretrievably interwoven with the problem of providing new houses. They were war measures, and served their purposes. They were framed to protect the worker. Workers now enjoy a fair reward for their labour; if not, they have effective means to enforce fresh demands, and arguments that rents are restricted in the interest of workers must therefore fall to the ground. The test of an industry or business undertaking is that it should pay those engaged in it a living wage. A full economic rent must be included in a living wage. If not, subsidies should come from the State, and not from house owners. If investors in houses could obtain adequate return on capital, there is no reason to sell houses and re-invest in other securities. It is therefore unreasonable to argue, as it has been, that if control was abolished thousands of occupiers would be thrown in the streets. It may be to the interest of temporary speculators to have house property vacant, but to permanent investors empty houses mean loss of income. To-day the chief desire of house owners is to sell houses as soon as they become vacant. Possibly they do not wish to part with property if it would only show a reasonable yield. A possible tenant might even be prepared to pay a fair rent for the use of the premises. But the control does not permit it. The house is sold, and official stupidity is allowed to become part of our economic system.

MEXICAN PETROLEUM.

The output of Mexican petroleum in 1919 reached the record figure of 87,360,000 barrels, as compared with 21,000,000 barrels in 1914, and equalled one-fourth the output of the U.S.A. The potential output—that is, the maximum possible output without any artificial restraint—would have reached the amazing figure of 547,000,000 barrels in 1919, acording to a U.S.A. official estimate, but only about 12 per cent. of this possible output was realised, owing to lack of transportation and storage facilities, unsettled political conditions, and restrictive legislation. Another difficulty is the destruction of some of the wells by influx of salt water. The figures for 1920 so far available indicate that the 1919 record will be beaten, especially in view of new explorations and developments. The enormous productivity of some of the Mexican wells is notorious, and the output from a single one is equal to the aggregate from thousands in the U.S.A. A geological explanation of this was recently attempted by E. de Golyer in a paper read before the American Society of Automotive Engineers. The chief Mexican wells at present are in the

Tampico and Tuxpam regions, but increasing attention is now being seriously given to other districts, and it is anticipated that still greater and richer deposits of petroleum will be found. The Mexican Petroleum Department, now assisted by a newly formed advisory committee for thoroughly reorganising and extending the industry, estimates the total oil areas at 80,000,000 acres in Gulf Coast States, at 50,000,000 on the Pacific, and at 18,000,000 acres in Lower California, making a total of 148,000,000 acres, or 230,000 square miles. Of this immense area only about 6,500,000 acres have been investigated, or about 10,000 square miles. It is believed that extensive new deposits have been discovered on some islands in the Gulf of California, and explorations are being carried on in other parts of Mexico—*e.g.*, Durango, near Mapimi; Colima, near Santa Rosalia; Chihuahua, near Casas Grandes; Guzman, Trinidad, Santa Maria, south-east of Ojinaga, and near Juarez; Coahuila, at Ubalde; and elsewhere. Several wells have become total losses through salt water, and although up till now these losses have been more than made good by the working of new wells, the loss is yet very considerable.

According to a report on the Mexican Petroleum Industry, just issued by the Latin-American Division of the U.S. Bureau of Commerce, 97 per cent. of the total investments in the oil industry are held by foreigners; and of the 27 companies working in 1918, 17 were American, five Spanish-Mexican, three Dutch, and two British. Of the 1918 output, about 64,000,000 barrels, 73 per cent. was American, 21 per cent. British, 4 per cent. Dutch, and 2 per cent. Spanish-Mexican, but in 1919 the British percentage was considerably increased. At the end of 1919 the total number of wells in Mexico was only 1,056, as compared with over 150,000 in the U.S.A., not including a vast number in California, and yet the Mexican output this year (1920) promises to equal nearly one-third that of the U.S.A., for the exports up to June 30th were 60,000,000 barrels, and if the present rate of export is maintained, the figure for the year 1920 will be about 135,000,000 barrels. The above-mentioned report gives details of the shipments of crude and refined from the chief districts in 1918 and 1919, and the shipments of the chief exporting companies, of which the largest were (in million barrels): Huasteca Petroleum Company (11.2), Cortez Oil Corporation (9.03), Penn.-Mex. Fuel Company (8.4), El Aguila S.A. or Mexican Eagle (8.2), Standard Oil Company of New Jersey (7.9). The shipments from the Tampico districts for the six months ending June 30th were: American (48.7), and British (9.1).

The U.S.A. is by far the largest importer of Mexican oil, and during her fiscal year ended June 30, 1920, she imported no less than 67,183,000 barrels, being an increase of about 50 per cent. over the preceding year.

The Mexican oil industry is controlled by a vast number of laws and regulations, which are constantly being added to, and some of them have been of a very restrictive, and indeed confiscatory, nature. The taxation is also heavy, and, according to the Presidential Message to Congress in September, 1919, the petroleum industry supplies 10 per cent. of the total Mexican revenue—*i.e.*, 13,000,000 pesos, out of a total of 135,000,000 pesos. The U.S.A., Great Britain, and Holland have protested against certain of the recent decrees, such as that of February 19, 1918. This was followed by several other decrees and new taxation, from which the petroleum companies sought relief in the Mexican courts without avail, and their appeals are now before the Supreme Court of Mexico. The whole of the existing law requires simplification and consolidation and the removal of contradictions and inconsistencies. Perhaps something will soon be accomplished in this direction, since a Petroleum Consultative Committee was appointed on July 16, 1920, entirely independent of the Petroleum Department. Its functions will be (1) study of laws and regulations; (2) study of existing disputes and appeals; (3) general study of the petroleum industry (4) development and encouragement of the industry. Other functions include statistics and the planning of an Institute of Petroleum. The chairman of this new committee is the Secretary of Industry and Commerce, Jacinto B. Treviño, and the members are mostly engineers and lawyers.

On July 2, 1920, the *Universal of Mexico* stated that the total capital invested in the petroleum industry, or, rather, that the present value of the industry, is about 600,000,000 pesos, distributed as follows:—

	Pesos.
About 1,000 wells working	200,000,000
Land	100,000,000
Pipelines, railways, and stock	100,000,000
Refineries, machinery, and buildings	100,000,000
Miscellaneous producing properties (mostly British)	100,000,000

Another 100,000,000 might be added for ships and tankers. The number of pipelines is about 120, with a total length of 1,500,000 metres; and the number of storage tanks is about 900 (50 built in 1919), with a total capacity of 7,500,000 cubic metres, or roughly 50,000,000 barrels. Details of the distribution of pipelines and tanks among the principal companies are given in the U.S. Bureau of Commerce report.

Business Notes.

Coal Strike and the Cotton Trade.—The coal strike has had an immediate effect upon production in the cotton spinning mills and weaving sheds of Lancashire. Considerable surprise was expressed in Manchester at the beginning of this week when it was announced that the Government had issued an Official Order, providing for the consumption of coal in factories, workshops, &c., to be restricted, so that no more than 50 per cent. of the weekly average quantity of coal consumed in the four weeks preceding October 16th may be consumed in any one week. A circular has been issued by the Master Cotton Spinners' Federation, drawing the attention of members to this decision. The working of the Order will be in the hands of the local coal committees. It is believed that many firms this week have not fulfilled the Order, but it is pretty certain that the necessary limitation of consumption will be enforced next week, and most firms are arranging to work only three days, or to run the machinery fewer hours each day, and thus save artificial light. If the strike continues, unemployment in cotton towns will soon be very serious. It may be said that Lancashire spinners and manufacturers, if anything, have larger stocks of coal than usual. Cases are being mentioned of firms who could run at full stretch for five or six months, but on the other hand, there are producers who only have supplies equal to four or five weeks' consumption. At the end of last week the result of the ballot on short time working in the spinning section of the Lancashire cotton industry was announced, and to the surprise of the trade it was found that the necessary majority in favour of the scheme had not been secured in the American section, the percentage of votes being 79, whereas over 80 per cent. is required before any organised curtailment of production can be put into force. It was decided that the matter should receive further consideration at the next meeting of the General Committee of the Masters' Federation, which will be held on November 5th. In the Egyptian section the ballot showed that owners of 86 per cent. of the spindles were in favour of stopping the mills on Saturdays and Mondays for one month, beginning on October 23rd. This arrangement of the Masters' Federation will now be practically abandoned, as all firms will be compelled to stop machinery on a larger scale than suggested, in order to conserve coal supplies.

Shipbuilding.—A revival of the world's shipbuilding is indicated by the report of Lloyd's *Register* for 1920, published last week. The annual report does not contain the full statistics, which make the returns of Lloyd's *Register* so valuable, but there are some interesting and encouraging figures in this report. The new tonnage classed by the *Register* during the past six years are as follows:—

Year.	Steam. Tons.	Sail. Tons.	Total. Tons.
1914-15	1,289,827	5,796	1,295,623
1915-16	789,688	521	790,209
1916-17	1,371,915	4,210	1,376,125
1917-18	2,552,607	16,517	2,569,124
1918-19	3,760,806	40,415	3,801,221
1919-20	4,186,882	66,641	4,253,523

The development of shipbuilding throughout the world since the period of paralysis following the outbreak of war is clearly indicated by this growth from 790,000 to 4,253,000 tons. Among the technical details contained in the report the most interesting information relates to oil fuel ships, the approximate division as regards fuel being given as follows:—76 per cent. use coal as fuel, 16.3 per cent. are fitted to use oil as fuel for boilers, 1.7 per cent. use oil in internal combustion engines, and 6 per cent. have sail power only. These percentages refer to vessels of 100 tons and upwards recorded in the current Lloyd's *Register,* and compare as follows with the figures of the previous year:—82 per cent. used coal as fuel, 10.5 per cent. were fitted to use oil as fuel for boilers, 1.5 per cent. used oil in internal combustion engines, and 6 per cent. had sail power only. It may well be that these figures represent the beginning of an all-important change in sea traffic, and anyhow the working of oil-power ships will be watched with the greatest interest during the next few years. Lloyd's Register Shipbuilding returns for the quarter ended September 30th last show that the tonnage building in the United Kingdom on that date was 3,731,098 tons, an increase of 153,000 tons as compared with the end of June last, and 914,000 tons more than at this time last year. The largest increase has taken place on the Clyde, where there are now 1,327,593 tons under construction. The output during the quarter shows a decrease of about 40,000 tons, as compared with that of the previous quarter. Owing to a large decrease in the figures for the United States, the total merchant tonnage building abroad, namely, 3,834,073 tons, is about 309,000 tons lower than at the end of June. Tonnage under construction in the United States has decreased enormously during the past 18 months, the total of 4,185,523 tons actually building at the end of March, 1919, having been reduced by 58 per cent. In the United Kingdom during the same period the figures have increased from 2,524,845 tons to the present record total of 3,731,098 tons, an increase of over 65 per cent.

Liverpool Cotton Association.—Our Manchester correspondent writes:—The annual report of the Liverpool Cotton Association has just been published. The highest point of the market for American cotton during the season was on February 20, 1920, when middling was quoted at 30.51d per pound and fully middling at 31.76d per pound. The lowest point was on September 12, 1919, when middling was quoted at 17.85d and fully middling at 18.45d per pound. The average price of fully middling American cotton during the past season was 26.32d per pound, as compared with 20.18d per pound in the year 1918-9. The average price of fully good fair Sakellaridis cotton during last season was 60.34d per pound, against 27.85d per pound in the previous year. The total imports into Great Britain compared with the preceding year shows an increase of 777,568 bales American, 209,326 bales Egyptian, 116,118 bales East Indian, 107,860 bales Peruvian, 66,480 bales Brazilian, 14,770 bales African, and 3,631 bales West Indian, the total increase being 1,295,753 bales. The average weekly consumption of Great Britain during the year amounted to 66,040 bales, consisting of 52,960 bales American, 6,840 Egyptian, 3,510 Peruvian, 1,800 East Indian, 590 African, 240 Brazilian, and 100 West Indian, being an increase of 10,770 bales. The total weight of cotton consumed in Great Britain during the 12 months was 1,726,011,159 pounds, against 1,526,218,182 pounds in 1918-19. A most interesting table in the circular is that relating to the proportional distribution of American cotton. The average amount taken by spinners in Great Britain during the past five years is equal to 21.29 per cent. of the total supplies, against 25.45 per cent. in the period 1910-15, 25.22 per cent. in the period 1905-10, and 41.23 per cent. in 1885-90. It will be noticed that the consumption of American cotton in Great Britain has steadily declined during recent years. On the other hand, there has been a remarkable increase in the takings of spinners in the United States. The percentage figure for the past five years is 56.49, against 39.63 per cent. in 1910-15, 40.25 per cent. in 1905-10, and 32.83 per cent. in 1885-90.

Austrian Property.—The Administrator of Austrian Property draws attention to the Order in Council, which was published in the London Gazette of August 20th, under which all property, rights and interests within H.M. Dominions belonging to Austrian nationals, wherever resident, are charged for the purpose of securing the payment of claims made by British nationals with regard to their property in Austria, and debts owing to them by Austrian nationals. Any person asked to pay any money or to deal in any way with any property, right or interest, which he has reason to suspect is subject to the charge, must immediately report the matter to the Department for the Administration of Austrian Property, Cornwall House, Stamford street, London, S.E. 1. The Board of Trade also calls the attention of holders of unsecured bonds of the former Austrian Government to the provisions of the Treaty of St Germain, according to which "holders of unsecured bonds of the old Austrian Government Debt held outside the boundaries of the States to which the territory of the former Austro-Hungarian monarchy is transferred, or of States arising from the dismemberment of the monarchy, including Austria, shall deliver through the agency of their respective Governments to the Reparation Commission the bonds which they hold, and in exchange therefor the Reparation Commission shall deliver to them certificates entitling them to their due proportionate share of each of the new issues of bonds corresponding to, and issued in exchange for, their surrendered bonds under the provisions of this annex." British nationals who are holders of such bonds are requested to send their bonds, together with their relative coupons, by registered post to the Administrator of Austrian Property, Cornwall House, Stamford street, S.E. 1. Currency notes issued by the Austro-Hungarian Bank held in this country should also be forwarded to the Administrator of Austrian Property, at the above address.

The Chartered Report. — Chartered shareholders will naturally scan the report of the British South Africa Company, issued this week, for news of the progress of the claim for £7½ millions (exclusive of interest) which is being heard by the Cave Commission. But the report has really no news to give, the decision of the Committee having been several times delayed and postponed, and does not appear to be in immediate prospect. "Apart from this delay," runs the report, "the outlook so far as the company is concerned has in no sense been changed." But if the lack of fresh news about the claim disappoints shareholders, the report brings them some compensation in the shape of the improved showing of the Southern Rhodesia accounts, which disclose a surplus of £103,607 for the year ended March 31, 1919, as compared with a deficit of £25,198 for the previous year. In Northern Rhodesia the year produced a deficit of £47,071, or about £2,000 less than in 1917-18. The commercial accounts for the year ended March 31, 1919, show an excess of revenue over expenditure of £229,490 as compared with £167,345 for the previous year. The total advances received by the company from H.M. Government up to March 31, 1920, in connection with military operations in Africa against the Germans amount to £1,915,000. "The directors adhere to their contention that the final liability for these disbursements rests with H.M. Government, and not with the company." The sum, of course, lies outside the £7½ millions claim arising out of the Privy Council's judgment. The company's resources in "cash and first-class securities"

stood on March 31, 1920, at £1,785,000, against £2,080,000 a year previously, the difference of £295,000 representing security depreciation.

Rubber Developments.—A Stock Exchange correspondent writes:—On Monday week, November 1st, there will come into force the newly agreed decision on the part of rubber-growers to cut down their normal production to the extent of 25 per cent The Rubber Growers' Association's success in getting 70 per cent. of the producers to agree to the scheme of curtailment is surprising even to those who are not familiar with the remarkable difficulties which confront any policy of combination amongst rubber-growing companies. The 70 per cent. includes British and Dutch interests, while in regard to the Chinese growers, although the proportion of adherents is not yet definitely ascertained, it is hoped that the figures will reach at least the proportion attained in the case of British and Dutch companies. It is not long since the Chinese growers approached the Rubber Growers' Association with a view to gaining material which should enable them to start a Growers' Association of their own, and cordial relations were established between the two bodies, British and Chinese, which are likely to prove of no little value. The Japanese interests apparently are practically unanimous in supporting the curtailment policy. It is expected, of course, that some of the 30 per cent. of growers still standing outside the circle of those who agree to the scheme will throw in their lot with the majority as soon as the reduction becomes operative. In addition to this, a scheme is on foot for revival of the idea which would set up a single selling agency in respect of rubber produced. The American buyers, as is well known, conduct their purchases through the medium of a very few agents, and if the same plan could be followed in regard to the sellers, the latter would be able to exercise a much more effective control over the price than can be hoped for if there are hundreds of companies all endeavouring to sell their output for what it would fetch. The proposal, as already stated, is a revival of one which was advanced about a year before the outbreak of war. It never came into being from the effective point of view, owing to the fact that, soon after it was started, the price of rubber suddenly improved, and this was followed by the defection of most of the companies who had subscribed to the theory that a combined selling agency would be useful in helping to stabilise the price of the produce. With rubber standing below 1s 6d a lb at the present time, it is natural that the producers should clutch at anything which offers them the hope of more profitable prices for their output, but if rubber started to rise again, it is safe to surmise that the constituent parties to a combination policy might break up again unless they were held together by agreements made when the price of rubber was flat. The somewhat anomalous position arises, therefore, of the raw rubber market being dependent, for its future prosperity and better prices for the product, upon present depression of the quotation for raw rubber. When once the agreements are definitely entered into, and have become binding upon all parties concerned, the effect should be to advance the price of the raw stuff under the ordinary laws of supply and demand.

Japanese Finance and Trade.—Cabled advices state that markets are still heavy. Both the cotton and sugar trades are experiencing further difficulties owing to the fall in American cotton and silver and in Java sugar. Many ships lying idle in harbour. The silk market was rather quiet, as the foreign buyers are hesitating to give new orders. The latest official forecast of the rice crop is reported as 63,000,000 koku (roughly 300,000,000 English bushels). It is expected that the Government will discontinue both the Imperial Ordinance of exemption of import duty on rice and wheat, and the Departmental Ordinance of restriction of export of rice and wheat, which will expire at the end of this month. The recent issue of Exchequer Bonds of 80,000,000 yen closed on the 11th inst. with the subscription of 90,000,000 yen. Bank notes in circulation, 1,066,000,000 yen; advances of Bank of Japan, 193,000,000 yen; call money rate, 2.5 per cent.; discount rate, 9.7 per cent.; imports during September, 113,000,000 yen; exports, 154,000,000 yen.

Uruguayan Railways.—A satisfactory state of affairs is disclosed in the report of the Central Uruguay Railway Company of Monte Video, and its three extension systems for the year ended June 30th. Gross earnings rose by 5.58 per cent., and working expenses by only 2.15 per cent., with the result that net profit was 12.88 per cent. higher. In the case of the main line alone gross earnings increased by 4.75 per cent., and expenses by 0.81 per cent., net profit being 19.49 per cent. higher. Receipts from passengers rose by 18.57 per cent., and from goods by 8.32 per cent. In expenses there was a saving of 11.22 per cent. under ways and works, and of 11.93 per cent. under locomotive expenses, most of the latter appearing under the head of wood fuel, which cost £108,000 less. Results of the combined system for the past eight years are shown below:—

Year.	Gross Receipts.	Expenses.	Profit.	Percentage of Expenses to Receipts.
	£	£	£	%
1912-13.....	1,243,393	669,008	574,385	53·81
1913-14.....	1,103,229	622,727	480,502	56·44
1914-15.....	946,767	562,684	384,083	59·43
1915-16.....	1,088,956	669,208	419,748	61·45
1916-17.....	1,178,602	771,433	407,169	65·45
1917-18.....	1,542,329	1,010,288	532,041	65·50
1918-19.....	1,792,804	1,219,680	573,113	68·03
1919-20.....	1,892,902	1,245,944	646,958	65·82

The profit on exchange in making remittances from Monte Video to London amounted to £184,123, as compared with £181,900 a year ago. Of this £130,000 has been transferred to the general reserve fund. Referring to the question of oil fuel, the general manager's report states that it had been hoped to burn oil in a large number of engines towards the end of the year, but that contractors were unable to obtain the necessary materials for construction of tanks and pipe lines. The separate figures for the main line and the extensions for the past year are shown in the following table:—

	Gross Receipts.	Working Expenses.	Profit.	Percentage of Expenses to Receipts.
	£	£	£	%
Central Uruguay	1,205,890	915,592	290,298	75·93
Eastern Extension ..	337,785	155,764	182,021	46·11
Northern Extension..	198,893	91,904	106,988	46·21
Western Extension ..	150,334	82,684	67,650	55·00

The main line and the Western extension each record a reduction in the ratio of expenses to receipts, but in the case of the Eastern and Northern extensions it is slightly higher. The dividend on the ordinary stock of the main company is raised from 6 to 7 per cent., and £13,500 is reserved for Corporation profits tax. In addition, £35,000 is paid to employees under a new scheme, under which they receive a percentage increase in pay equal to the dividend declared on the ordinary stock, provided such dividend is not less than 5 per cent. The Eastern Extension pays 9 per cent., as last year, but the Northern Extension dividend is reduced from 9 to 8 per cent.

The Liberian Loan.—Attention has been directed this week to the delay in paying the two overdue coupons of the Liberian 5 per cent. loan of 1913. It is not the fault of the Liberian Government, which has informed the Council of Foreign Bondholders, through the Liberian Minister, that £20,000 was remitted on July 1st, which should be more than enough. This sum duly reached London on September 22nd, but the National City Bank of New York, the agents for the loan, have as yet given no instructions for its disbursement. The bonds, however, have risen to a quotation of about 65. The capital amount of the loan now outstanding is $1,458,000. The working of the arrangements for payment of the interest is at present obscure. The revenues assigned are payable to an American Receiver-General, with whom, before the war, three Receivers were associated, respectively representing the

A Bank Statement that any Man or Woman can Understand

THE CORN EXCHANGE BANK

NEW YORK.

Statement of October 1st, 1920.

The Bank owes to Depositors ... ... A conservative banker always has this indebtedness in mind, and he arranges his assets so as to be able to meet any request for payment.	$194,787,051.44
For this purpose we have:	
I. Cash... ... ... (Gold, Bank Notes and Specie) and with legal depositories returnable on demand.	32,903,018.74
II. Checks on other Banks ... ... Payable in one day.	21,450,289.61
III. U. S. Government Securities	45,260,937.79
IV. Loans to Individuals and Corporations ... ... Payable when we ask for it, secured by collateral of greater value than the Loans.	34,230,682.20
V. Bonds ... ... Of railroads and other corporations, of first quality and easily saleable.	16,631,656.42
VI. Loans ... ... Payable in less than three months on the average, largely secured by collateral	55,058,948.94
VII. Bonds and Mortgages and Real Estate	980,998.16
VIII. Twenty-two Banking Houses ... ... All located in New York City.	3,582,622.70
Total to Meet Indebtedness	$210,099,154.56
IX. This Leaves a Surplus of ... ... Which becomes the property of the Stockholders after the debts to the depositors are paid, and is a guarantee fund upon which we solicit new deposits and retain those which have been lodged with us for many years.	$15,312,103.12

The Corn Exchange Bank Supplies Banking Facilities to Greater New York Through its Forty-three Branches.

William and Beaver Streets

British, French and German bondholders. During the war the German representative was eliminated; the French holding is now believed to be very small, and the British Receiver appears to have left Liberia. Instructions for payment usually accompany the remittance, and an explanation is urgently needed of the present unaccountable delay.

Aberdeen's Economic Chair. — We are informed that through the liberality of Sir Thomas Jaffrey, one of Aberdeen's prominent citizens, the University will proceed shortly to the election to a Chair of Political Economy. The endowment is upwards of £1,000 a year, and a liberal pension is attached to the post.

Claims Against Mexican Government. — An intimation has been received in the Department of Overseas Trade from H.M. Legation in Mexico that a Presidential Decree has been promulgated, by which the period within which claims for damages caused by the revolution between **November 20, 1910,** and June 30, 1920, must be presented, has been extended to February 5, 1921. After that date no claims whatever will be admitted.

Oversea Correspondence.

UNITED STATES.—NEW FINANCING ON LARGE SCALE—BRISK INVESTMENT DEMAND—PRICE REDUCTIONS RETARD TRADE AND INDUSTRY.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 8.

CONDITIONS in the investment market have become highly favourable for the flotation of new securities, judging from the large amount of financing now being done here by industrial and railroad corporations, municipalities, and some foreign interests, and the quick absorption of such issues. Offerings this week of new bonds, notes, and equipment trusts were extensive. One of the largest pieces of financing comprised $40,000,000 Swift and Co. five-year 7 per cent. notes offered by a Chicago and New York banking syndicate at 97½ and interest to yield the investor about 7.60 per cent. The notes will rank ahead of the company's $150,000,000 authorised and outstanding capital stock, on which the annual dividend rate is 8 per

cent., and under the trust agreement the company pledged itself to maintain current assets of at least 1½ times current liabilities, plus the amount of outstanding notes; no new mortgage is to be made against present assets and property during the life of the notes, which are callable at 102 on April 15, 1921, and at one-quarter of 1 per cent. less each six months thereafter to October 15, 1924. This issue is meeting with an excellent demand from investors. The issue of $2,400,000 one to fifteen-year 6½ per cent. equipment trust certificates of the Pittsburgh and Lake Erie Railroad, brought out by J. P. Morgan and Co., is especially interesting because some of the notes in the series are offered at a price to yield less than 7 per cent., which for many months has been the minimum rate on such securities. The one to five-year notes are offered on a 7 per cent. basis, but those maturing in six to ten years are priced to yield 6⅞ per cent., and the eleven to fifteen-year certificates 6¾ per cent.

European companies are borrowing here, and find a ready market for their new securities, a notable instance being this week's offering of $10,000,000 seven-year 8 per cent. secured gold bonds of the Belgian company, Solvay et Cie., which controls the Solvay Process Co. and the Sernet-Solvay Co.; both of the latter are included in the proposed merger of chemical companies into the Allied Chemical and Dye Corporation, and the new bonds will be secured by shares which will be exchanged for stock in the consolidated company. They are free from all Belgian taxes, and redeemable, all or in part, on any interest date after October 1, 1923, on 30 days' notice, at a premium of 1 per cent. for each year or portion of a year between the date of redemption and that of maturity. The new issue, which was offered at par and interest by a syndicate headed by the National City Co., was over-subscribed, having been sold within a few hours after the subscription books were formally opened. Seldom, if ever, have new European railroad securities been floated in this market. Such an offering, however, is now being made here by a group of local bankers, and consists of 50,000,000f 6 per cent. bonds, due December 31, 1960, of the Compagnie des Chemins de Fer du Midi, commonly known as the Midi Railroad of France; the bonds are in denominations of 1,000f each, and are being offered, for the present, at $65 per 1,000f. They are redeemable at par up to the date of maturity, when the Midi company's concession from the French Government expires. Principal and interest, which are virtually guaranteed by that Government, are payable at the offices here of A. Iselin and Co. in francs by draft on the Bank of France, without deduction for any French taxes, present or future, if held by non-residents of France, and are convertible into corresponding French bonds listed on the Paris Stock Exchange. It is expected that this offering, if successful as seems likely, will be followed by others from your side. The large amount of financing done here by Canadian railroads this year was increased this week by an issue of $25,000,000 20-year 7 per cent. sinking fund gold bonds of the Grand Trunk Railway of the Canadian national railways system. The bonds, which are a direct obligation of the Grand Trunk, and guaranteed as to principal, interest, and sinking fund by the Dominion Government, were offered for public subscription at par and interest by a syndicate headed by William A. Read and Co. Orders exceeded the amount of the offering, and the entire issue was taken so quickly that advertisements in the newspapers were published only as a matter of record.

The Department of Agriculture's final cotton report and estimate was about as expected. It showed a condition on September 25th of 59.1 per cent. of normal, as against 67.5 a month earlier and 74.1—the highest of the year—on July 25th. The latest condition percentage is 4 points below the ten-year average. Instead of 12,783,000 bales indicated on August 25th, the Government now estimates the yield at 12,123,000 bales, which is 800,000 bales larger than a year ago, and the heaviest yield since the 16,135,000 bale crop of 1914. The sharp fall in the price of spot cotton, which has accompanied the decline in crop prospects, reflects the influence of slackened manufacturing here and in Europe.

Trade and industry generally continue to show a great deal of irregularity and unsettlement, with much hesitation in making commitments for the future, owing to price uncertainties. The lowering of merchandise and commodity prices is still a conspicuous feature. Wheat (December option) is off more than 70 cents since trading in futures was resumed in July, and this week the price fell below $2.00 per bushel for the first time since the United States declared war on Germany. Flour is down $2.00 since the latter part of September, cotton has dropped over 18 cents from the high point of July, and refiners' price of 11 cents for sugar represents a decline of 12½ per cent. from last spring, retailers bearing a large part of the decline. Bradstreet's index number of commodity prices as of October 1st is $16.9094, showing a decline of practically 6 per cent. from September 1st, and 19 per cent. from the high peak of February 1st, but the number is still 94 per cent. above that ruling on August 1, 1914. The decline from the high point of 1920 to the end of September was 32 per cent. in textiles, 33 per cent. in naval stores, 40 per cent. in miscellaneous products, and about 13 per cent. in breadstuffs, metals, hides, and leather. Iron and steel are quieter; premiums are no longer offered for deliveries, and independent producers' prices are gradually working toward the lower levels which have long been maintained by the leading interest.

In the stock market industrial shares are steadier, but rails reflect considerable realising, although some high-priced issues have continued their advance. Bonds are very active, many descriptions reaching new high points this week for the current year, but profit-taking by speculative interests within the past few days has checked the advance, temporarily at least.

GERMANY.—SOCIALIST FEUDS—DIESEL MOTORS—FINANCIAL REFORM—EXCHANGE AND BOURSE—INDUSTRY—EXPORT DUTIES.

(FROM OUR CORRESPONDENT.)

BERLIN, October 16.

THE Independent Socialist Party, which at the Reichstag election of June became second in strength among Reichstag groups, has formally dissolved into two; and the Majority-Socialist Party is engaged in a feud on important questions of principle, which also threatens dissolution. At the Party Congress, at Halle, the Independent delegates, by a majority of 237 against 156, resolved to accept the conditions dictated by Moscow for accession to the Third International. The result of the vote was met with acclamation for "the Communistic World-Revolution." Moscow's conditions require a complete breach with Reformist Socialism, of which Kautsky and Hilferding are named as leaders; and "systematic expulsions from time to time from the party executive of the *petits-bourgeois* elements which have smuggled themselves in." This decision was come to after a four hours' speech by Zinovieff, president of the Russian Northern Commune, who proclaimed for terrorism against the bourgeoisie. Herr Crispen, chairman of the party and leader of the dissenting minority, declared this decision null, on the ground that it means accession to the Communist (Spartacist) Party which is a section of the Third International, and that to join another party means resigning from the Independent Party. The minority thereupon left the sessions hall, and, claiming to be the real Independents, are holding their own Congress.

The Congress at Cassell of the Majority-Socialists was marked by a polemic between the former Minister of Industry, Wissell, and Robert Schmidt, who succeeded him in that post, as to the comparative merits of the Wissell system of compulsory controlled syndicates on the basis of private ownership (so-called "Plan-Industry") and the system of "full Socialisation," by which is meant transfer of private concerns against compensation to the public (usually to a public corporation created *ad hoc*). Herr Schmidt declared that the Plan-Industry has merely strengthened Capitalism; and Herr Wissell replied that during Herr Schmidt's term nothing was done for full Socialisation, and declared that during this term Capitalistic excesses beat past records. This charge refers to the big company profits of the past year. The Congress majority seemed to be with Herr Schmidt, which means that the Majority-Socialists, following the Factory

Council's Congress of last week, are more inclined for full Socialisation than when they were in power. At Weimar, a year ago, the party, then in power, accepted the "Plan-Industry." Present signs are that no full Socialisation (except possibly of coal) will be carried out by any party, but that parties out of office will continue to profit by the failure to socialise of the parties in office.

The Allies' demands for destruction of the German Diesel motors, on the ground that they may be used for submarine-boat propulsion, and for delivery of 810,000 cows, as well as a large number of bulls and draught oxen, have created a great stir, and will be difficult to fulfil, even if extreme measures of compulsion are threatened. The destruction of the Diesel motors would cause an additional demand on the Federal finances for compensation, estimated at 4½ milliard marks, and would have catastrophic results for industry. The motors are used in large numbers for generation of electricity, and in general industry. For two years past a movement has been under way to increase the native supply of oils from shales and brown-coal, and, particularly with the latter, great progress has been made. The Diesel motor is one of the most efficient ways of using oil power; and there are some who see in its spread, and in the spread of gas-engines and gas-turbines, which would consume the gas produced together with the oil, an ultimate way out of the coal shortage. Since the Versailles Treaty gives the victor countries the widest conceivable powers to prevent restoration of Germany's submarine-boat system, it is hard to see any reason for the destruction of some of the most precious productive mechanism in the world.

Ministers have come to an agreement by which the authority of the Finance Department to prevent unnecessary expenditure will be strengthened. The departments are henceforth forbidden to take any measures which will make necessary fresh expenditure without first getting the Finance Minister's consent. In case of refusal of consent, a department may appeal to the Cabinet; and the Finance Minister, should the Cabinet decide against him, may appeal to it again, and may be overruled only by a majority of the whole Cabinet in presence of the Chancellor. In connection with this reform, the Cabinet has declared for keeping expenditure as low as possible. That these measures are not drastic enough is generally admitted; nothing short of revolution in the administration would give any hope of material betterment.

The Reichsbank for the last reported week (ending October 7th) shows a further increase of 356 millions in the note and Darlehens-Kassenschein circulation. The foreign exchanges yesterday reached their highest point of the present movement, sterling selling at 244.50 marks, and the dollar at 70.32. The Berlin Bourse was closed two days of this week, but in the Produce Exchange and elsewhere stock transactions were carried on, and the tendency was, and has since continued, firm. Many orders for foreign buyers were received. Favourites during the week were the mining and metallurgical stocks, and on days of rising exchanges the exchange securities. The demand for metal shares was not checked by the report of Herr Stinnes that his Rhine-Elbe Union (the recently fused Deutsch-Luxemburg and Gelsenkirchner Companies) has been obliged by coal shortage to blow out two further blast furnaces, after already four had been blown out. Confidence was fostered by continuing declarations of big profits. The Hoesch Iron and Steel Company (Dortmund) announces an operating surplus of 51,676,995 marks, against 8,075,450 marks last year, and the Westfaelische Iron and Wire Company (Werne) reports gross profits of 21,325,812 marks, against 2,922,855 marks. Such high profits are not confined to mining and metal. The quotations of the chief Federal and State loans to-day were :—

5 % War Loan	79·50
4 % Reichsanleihe	67·70
3½ % „	58·10
3 % „	63·60
4 % Prussian Cons.	63·50
4 % Bavarian	81·80
3½ % Hamburg Staats-Rente	69
3 % Saxon Staats-Rente	56·60

Industrial conditions are not improving as rapidly as was expected. Against the falling mark exchange is operating the price fall in the outside world and increasing indications of general stagnation. The boot and shoe industry has recovered best; the Weisselfels boot industry, which three months back was entirely without orders, reports that it cannot get enough workmen, and that orders are being refused. Hide prices are rapidly rising, and there is a very small supply. The price of heavy ox-hides has risen to 14-17.50 marks a pound, of light to 15.50-18.50 marks; bull hides, heavy 12-15 marks, light 15-17 marks; sheep, heavy 13-17 marks, light 14-18 marks; horse-hides, 177-476 marks each. To encourage beet and sugar production the Government has raised maximum prices. The new maximum prices for beet are 20 marks per 50 kilos; for raw sugar 210 marks (till now 150 marks) per 50 kilos; and for refined sugar 280 marks to 292 marks, according to district. The State control of sugar is retained, but is expected to be abolished next September. The iron market is very quiet, and the supply of pig-iron, now estimated at 34-40 per cent. of the maximum peace figure (no statistics have been issued for a year), more than meets the present demand. In foreign markets competition is being met from Lorraine, Luxemburg, and the Saar, but not, trade journals report, from England. Makers of railway rolling stock complain of almost complete lack of orders. An export syndicate for railway track material is being negotiated. The "Eisenwirtschaftsbund" (compulsory syndicate for pig-iron and heavy steel goods) will shortly meet to decide whether the maximum prices fixed two months back until the end of October shall be changed. Iron and steel prices, after rising uninterruptedly since the beginning of the war, were twice reduced last summer. A further reduction is demanded by finishing manufacturers, but will be opposed by the heavy industry on ground of the increased cost (due to the exchange) of foreign ores.

The Government has decided for a new policy on the contentious matter of the export duties. The duties will not be reimposed on those goods on which they were lately abolished, and they will be removed from goods the export of which in August, 1920, was more than 50 per cent. less than the monthly export in the year August, 1919-July, 1920. The duties on other goods will be reformed on a sliding scale, following fluctuations in mark exchange, general export conditions, and the state of employment in each branch. This sliding scale plan is sharply opposed by the exporting industries, on the ground that the officials take weeks or more to weigh all the complex determining conditions, and that by the time the most suitable duty has been calculated the conditions for which it was designed have radically changed. That has been the case with official alterations in the duties so far.

INDIA.—POLITICS—THE NEW COUNCILS—THE EXCHANGE PROBLEM—FURTHER FALL PREDICTED—JUTE OUTPUT NOT SUFFICIENT—LOANS FOR LOCAL GOVERNMENT ENTERPRISES.

(FROM OUR CORRESPONDENT.)

BOMBAY, October 1.

THE political tide in India is on the turn. The last Presidency and Provincial Legislative Councils under the old *régime* have gone their way, and all future political action will eventuate under the scheme formulated in the Montagu-Chelmsford Report, which, as is well known, gives India elective freedom. This much can be said with a degree of certainty—the men who will form the bulk of those reformed councils, as they are called, will be men who have the development of the country—commercially and socially—at heart. Much time and money now frittered away on futile Nationalist political activity will be at the command of business enterprise. This does not mean that the *Swadeshi* movement will gain in power or that intensified efforts will be made to oust the British merchant and financier. It means—or, rather, it will mean—that India will experience a commercial enlargement which, up to the present, has been, owing to political discordances, impossible.

The main problem in India is the exchange. Everyone wants a stabilised exchange. This we are not likely to enjoy yet awhile. The Government of India attempted to solve the problem by adopting the report of a specially appointed Currency Committee, and placing the rupee at 2s on a gold basis and also allowing the sale of Reverse

Councils at a higher Indian exchange rate than ruled in the banks' telegraphic transfer quotations. This was done in an attempt to stabilise the rupee at 2s, and the effort has been a signal failure, and has, incidentally, resulted in the loss of over 20 millions sterling to the Government of India home exchequer. Within the last week, however, the sale of Reverse Councils has ceased, and the Indian exchange is at present free from Government action. With an adverse trade balance which we have now, and have had for some months, the present 1s 10d rate is likely to drop. Money is tight; overstocking is common throughout the Eastern markets; home and foreign buyers are quiet, and the menace of a gigantic coal strike in England hangs very heavily over the East.

The final official jute forecast has provided the sensation of the week in financial circles, especially at Calcutta. The estimates total 59 lakhs of bales, which quantity is by no means sufficient for the world's requirements, even allowing for a reduced Continental demand. This return unsettled the exchanges at Calcutta, and, according to telegraphic advices, at Dundee, but during the past few days a more optimistic view has been taken of the situation. The opinion in Bengal is that the estimate is on the short side, and that due regard has not been paid to the stocks brought forward from last season. No one can say until June next what this season's return of Indian jute will be, and the present policy of the brokers and shippers seems to point to a determined effort being made to prevent rank speculative gambling in mill shares simply on the strength of this latest forecast.

India is experimenting at the present in the flotation of what are, in the home view, municipal loans, and the experiment is proving a decided success. For the development and improvement of the Bombay Presidency a loan of six crores of rupees is in process of being raised. Over three crores have been subscribed up to the time of writing. The banks are giving every support, advancing in cases as much as 95 per cent. of the capital at, on the average, 6 per cent. The rate of interest accompanying the loan, be it noted, is 6½ per cent. per annum, income-tax free. The Mysore Government, too, floated a loan a little while ago, and up to the present have raised 9,424,813 rupees out of a demanded total of 10,000,000 rupees. More of these loans are likely to appear in the near future. There is an enormous amount of money in the country—Indian owned—with which the possessors will not speculate or even invest in obviously safe securities and industrial concerns. But these people have no hesitation in lending their wealth to the Government, which, on the face of it, is a great compliment to the British *Raj*.

CANADA.—THE TARIFF COMMISSION—THE HEARINGS IN BRITISH COLUMBIA—THE RESOURCES AND PROSPECTS OF THE PROVINCE—BUSINESS AND CROP CONDITIONS—THE RAILWAY RATE APPEAL.

British Columbia, October 4.

The Tariff Commission has spent the last fortnight in the province of British Columbia, and has held sittings at Vancouver (2), Victoria, Vernon, Nelson, and Traill. Representatives of the lumbering and fruit-growing industries formed the majority of the witnesses who gave evidence, or submitted memorials, and they were uniformly in favour of substantial protective duties. American competition was their bogey, and their complaint was that the cheaper grades of lumber and fruit produced in the Pacific Coast regions of the U.S. would, in the absence of a tariff, flood the western Canadian market, and demoralise prices. Invariably they emphasised the advantages which their American competitors enjoyed by way of lower costs of production and a wider market. The farmers of the prairie provinces demand the removal of the duties on both fruit and lumber, and their attitude was denounced in B.C. as selfish. In fact, the bitterness of the criticisms was in serious contradiction of the theory that a protective tariff is an agency making for national unity. The hearings, however, showed that the higher costs of production which the B.C. lumbermen and fruit-growers bemoaned were in many cases due to the incidence of other duties on commodities which formed part of their raw material or implements of production. The lumbermen complained about the duties payable on sawmilling machinery, and at Nelson an agent who sold paper for wrapping fruit gave a narrative of a personal transaction wherein he was able to provide their supplies to a local co-operative association from the U.S. after paying the duty and exchange at a price lower by 11½ per cent. than Canadian sellers quoted. He charged the existence of a Canadian combine. The fruit-growers in B.C. at present enjoy a substantial protection, the duty on apples having been raised from 13⅓ to 30 cents per box in 1916, and they claim that the increase saved them from disaster, as before the change they were often unable to dispose of their crop. The war brought them considerable prosperity, and the industry is gradually getting on its feet. For a long time B.C. fruit had the reputation of being beautiful to look at, but somewhat tasteless. Experiments in grafting have remedied this defect in a certain measure, and the spread of the co-operative idea has effected great economies in the processes of packing and distribution. Some observers assert that the improvement in the prospects of the fruit industry may be even more attributable to these causes than to the tariff increase of 1916. The B.C. fruit growers last year supplied 95 per cent. of the apple demand of the prairie provinces, and beginnings have been made with an export trade to the U.S., Great Britain, and the Antipodes. There are apple-growers in Australia who dislike outside competition, and Mr Hughes has lately gratified them by practically trebling the duties on imported apples. The B.C. fruit-growers contend that this step has closed a promising market, and urged the Commission to recommend negotiations to secure the benefit of preferential rates. The lumbermen have enjoyed prosperous times during the war years and since the armistice. Prices were good, and American importation declined to a mere fraction of their pre-war volume. When during the past two years the Americans were making up their leeway in building, they purchased large quantities of Canadian lumber, and the exchange rates made such business very attractive. The result was that supplies were diverted from the prairies, and a demand arose from these regions for an embargo on lumber exports. Now business is much quieter, and the lumbermen complained that the increase in freight rates was responsible for a serious falling off in orders. The secretary of the Mountain Lumbermen's Association drew a very mournful picture of the prospects of the industry. The evidence revealed that prices of lumber were substantially lower south of the border than in Canada, and this factor must decidedly lower the cost of housing and consequently of living. The manufacturers and other protectionists continually complain about the comparatively meagre population affording too narrow a market, but the obvious remedy is to lower the cost of housing and living, which in late years has driven so many people to warmer regions, where living costs are less.

There was no protest against the tariff from any general organisation in B.C. There were abstract protests from isolated free-traders in Vancouver, but the most concrete complaints against the tariff came from mining people in the Kootenay district at Nelson. The mining community is scattered, and can rarely make its voice effectively heard by commissions and legislators, but it is plain that the majority of its members are thoroughly convinced that the protective tariff contains no benefits for them.

One interesting example was given of the workings of a protective tariff. During the war the British Government via the Imperial Munitions Board at Ottawa erected a large plant in Toronto. It was disposed of to Baldwins, Limited, who proposed to use it for the manufacture of tinplate, which was on the free list. As an inducement to Baldwins, Sir Thomas White in the 1919 Budget, by the alteration of a single word, made tinplate subject to substantial duties. Now the Commission found that the salmon canners of B.C. and a paint manufacturer in Victoria united in denouncing the new duty as increasing their costs of production. The Commission spent a day visiting at Trail the extensive plant of the Consolidated Mining and Smelting Company of Canada, which

is virtually a subsidiary of the Canadian Pacific Railway. The president of the company appeared to demand the retention of duties on refined copper, lead, and zinc, and the introduction of a bounty on zinc exports, as the Canadian market cannot absorb the domestic production. In discussing lead, he denounced the British preference as a pest, complaining that Spanish lead was now being freely imported to Canada by the subterfuge of a minor finishing process in England. Undoubtedly protectionist sentiment dominates in B.C., though probably no province suffers so much from the incidence of tariff. The tariff militates against agricultural settlement, and until this is increased the cities cannot hope to expand. For the next fortnight the Commission will sit at a series of points in the prairie provinces, and will there hear the full force of the anti-protectionist case.

The moving of the crop, and the consequent distribution of money to the farmers, has stimulated business, and wholesalers in all the cities report orders pouring in freely from country merchants. September has been an exceedingly wet month, and the rains have reduced the value of many crops, British Columbia being perhaps the worst sufferer yet. The grain market has been steadily weakening, and a further decline is prophesied. But the western crop is still declared to be probably the most profitable in the history of the country, and will do much to sustain business during the winter. The milling companies are somewhat gloomy about their prospects because Britain and other countries, anxious to secure the wheat offal for cattle food, decline to take more than a limited quantity of flour. Money is still tight, and the stock markets are exceedingly dull. The Cabinet-in-Council have now heard the appeal against the recent increase in freight rates, and have reserved their decision. The effect on trade has been decidedly serious already, and there is some expectation that the Cabinet may refer the case back to the Railway Commission, and that some abatement in the increase may be then granted.

AUSTRALIA.—GOVERNMENT NOTE ISSUE—WOOL.

(FROM OUR CORRESPONDENT.)

MELBOURNE, September 3.

THE Commonwealth Government has introduced a Bill, one of the main features of which is to compel the banks (with the exception of the Commonwealth Bank of Australia) to hold up a portion of their deposits in Australian notes, the administration of which is to be transferred from the Treasury to a Note Issue Department of the Commonwealth Bank of Australia. The Note Issue Department is to be managed by a board of directors composed of the Governor of the Bank and three other directors appointed by the Government. Every bank other than the Commonwealth Bank is to be compelled to hold "in the form of Australian notes an amount not less than 20 per centum of the deposits which it holds, repayable at call or less than six months' notice, and 10 per centum of deposits it holds repayable at six months' or longer notice." As the word "deposits" is not defined, it would appear to include deposits in London or elsewhere outside Australia as well as those within Australia. The Board of the Commonwealth Bank is required to hold not less than one-fourth of the amount of notes outstanding in gold coin and bullion, and is empowered to invest the remainder or any part thereof (*a*) on deposit with any other bank, or (*b*) in securities of the United Kingdom, or of the Commonwealth or of a State, or (*c*) in the ordinary business of the Bank. The power conferred upon the Commonwealth Bank by clause (*c*) is a new feature. Power is reserved to the Governor-General of the Commonwealth to transfer the control of and responsibility for the whole or part of the Australian note issue from the Board of the Commonwealth Bank to the Treasurer, whenever in his (the Governor-General's) opinion an emergency has arisen which renders it desirable in the public interest so to do, and to retransfer the note issue to the Board of the Commonwealth Bank when the emergency has ceased. Apart from the Board to be established under this Bill, which will have to do only with the note issue, the Commonwealth Bank of Australia has no board of directors, but is managed solely by the Governor of the Bank with the assistance of the Deputy-Governor and the staff.

The weather lately has been shaping well for the crops, a good deal of rain having fallen in the principal wheat-growing districts during the last few weeks. As an increased area has been sown there is now reason to hope for a good yield in the four wheat-producing States, subject mainly to a moderate amount of showery weather in September and October. The Australian wool clip does not appear likely to exceed 1,600,000 bales, or a decrease of about 400,000 bales as compared with the 1919-20 clip, and in view of the position of stocks the process of realisation will be a somewhat lengthy one.

A report on the work of the Australian Central Wool Committee for the 1919-20 season shows that 2,043,701 bales were appraised. The average price per lb of wool appraised in a greasy state was 15.66d per lb, and scoured 26.75d. Reduced to a greasy basis, the average for all wool was 15.23d, or 0.27d per lb less than the flat rate of 15½d at which the clip was purchased by the British Government. The total credits for the season amounted to £50,926,297, including £2,227,951 for wool taken by Australian manufacturers. The payments by the British Government have been made immediately after appraisement, irrespective of shipment, and on June 30, 1920, there was wool awaiting shipment for which the British Government had paid to the amount of £25,075,000. From the report it appears that throughout its term of office (since 1916) the Central Wool Committee's relations with the Imperial authorities have been of a most harmonious character, and on all questions outside of local administration the Imperial wool authorities have always shown a willingness to meet Australian views.

JAPAN.—FAVOURABLE TRADE BALANCE FOR AUGUST—THE REVENUE.

(FROM OUR CORRESPONDENT.)

TOKYO, September 10.

AFTER seven months of adverse trade balance, Japan's foreign commerce has at last taken a favourable turn, and the month of August witnessed an excess of exports over imports to the amount of 51,840,000 yen, as against only 1,802,000 yen at the end of the same month last year. The export trade of Japan is, as a whole, quite as large for the first eight months of this year as for the same period last year. The new turn is in keeping with the general tendency of Japanese commerce as the end of the year approaches, but as it was largely due to expansion in exports of cotton goods, it is a question whether it may be expected to continue. The value of cotton tissues exported in August totalled 31,830,000 yen, and that of cotton yarns reached 20,970,000 yen. It is not too much to say that the prospects of eliminating the unfavourable balance will depend a good deal on fluctuations in the raw silk trade. During August the total value of raw silk exports was 33,700,000 yen, against 72,040,000 yen for the same month last year, a very sharp decline. Hope lies in the fact alone that trade generally is up to that of last year. In imports the biggest declines were in raw cotton and rice, as well as in iron, rice falling from over 23,000,000 last year to only something over 3,000,000 yen this year, while raw cotton imports fell off from over 55,000,000 yen to 22,216,000 yen.

Japan's trade has increased in all markets of the world with the exception of Italy, while with China there has been little or no gain owing to anti-Japanese agitation, which is a source of great anxiety to commercial circles in Japan. Trade with Asiatic countries increased from 530,361,000 yen for the first seven months of last year to 616,754,000 for the same period of this year. Japan's imports from Asia also increased from 564,986,000 yen to 770,323,000 yen, leaving Japan an unfavourable balance, however. The cause of this excess of imports was increased importation from British India, China, and French Indo-China, chiefly raw cotton and foodstuffs. Trade with Europe was also unfavourable, the cause being Japan's increased imports from Great Britain and Sweden. Trade with North America for the last eight months was unfavourable, because of raw cotton and iron imports, and with South America because of large imports of Chilian saltpetre. Wool imports were responsible for Japan's

unfavourable balance with Africa. The eight months have also shown an adverse balance with Oceania.

Japan's national revenue for the fiscal year recently closed shows a substantial gain, the increase amounting to well over 328,000,000 yen. It is expected, however, that the revenue for the present year will be decidedly less. The ordinary revenue for last year totalled 1,962,137,831 yen, which was 151,000,000 yen more than the previous year. The extraordinary income amounted to 745,133,000 yen, or 177,598,000 yen above the year before. Japanese finance is not always easy to understand, as there is never a deficit, that being balanced by alleged surplus revenue from the preceding year. Japan's expenditure up to the end of July amounted to 1,172,328,000 yen, an increase of more than 155,000,000 yen on the previous year. A feature of last year's revenue is the decline noticeable in profits from the Monopoly Bureau, which amounted to only something over 75,000,000 yen, as against a net gain of more than 89,515,000 yen last fiscal year. There is also a sharp decline in profits from army arsenals, the total for this year amounting to no more than a little over a million, against 8,817,000 yen for the previous year. The increase in revenue this year is to be accounted for by the decrease in income-tax, business tax. sugar consumption tax and import duties as well as from public utilities managed by the Government; but perhaps the greatest cause is merely bad times.

GREECE.—PUBLIC FINANCE—INDUSTRIAL PROGRESS—THE PORT OF PIRÆUS—TOBACCO PRODUCTION.

(FROM OUR CORRESPONDENT.)

ATHENS, October 9.

THE following official figures show the situation in drachmas of the Greek debt before and after the war :—

	End of 1913.	May, 1920.	Increase.
Internal consolidated	118,607,110	280,166,288	161,559,178
Internal provisional	180,000,000	492,751,200	312,751,200
Internal floating debt	71,775,975	231,891,754	160,115,779
	370,383,085	1,004,809,242	634,426,157
External consolidated	846,096,511	1,114,043,011	267,946,500
External advances (by foreign Governments and National Bank of Greece)	..	1,164,134,344	1,164,134,344
Totals	1,216,479,596	3,282,986,597	2,066,507,001

On the other hand, the regular increase (in drachmas) of the principal items constituting the public revenue appears from the following table :—

	Direct Taxes.	Indirect Taxes and Monopolies.	Total.
1917	66,685,508	104,378,000	171,063,508
1918	79,588,958	159,595,000	239,183,958
1919	107,605,454	271,087,000	378,692,454
1920*	108,973,000	286,037,000	395,010,000

* Estimated.

The increase of direct taxes between 1918 and 1919 is due to the overhauling of direct taxation, and particularly to the levy on income, which practically began last year. Income-tax is of a twofold nature, *i.e.*, analytical and synthetical. Analytical tax is levied at various rates, on each of the seven classes, into which income of all sources has been divided for taxation purposes. The synthetical tax is imposed on the total income of the taxpayer, over and above the analytical tax. It should be noted that the above items do not include the excess profits tax for the years 1915 to 1919, which has yielded a net revenue at about 120 million drachmas, and a special fund of 60 million drachmas, representing a contribution from the profits realised out of the sale of ships, &c., and set aside for the construction of new tonnage and some secondary purposes. On the other hand, the increase shown in the indirect taxes and monopolies must be accounted for by the growth of the receipts of Customs, of the Excise duties and monopolies. The increase of the public revenue is not due to temporary or exceptional causes, but is an expression of the gradual and continued development of the country and of its economic life. The following is the income and expenditure, ordinary and extraordinary, for the years 1919-1920 and 1920-1921 :—

(In Millions of Drachmas.)

	Receipts.	Expenditure.	Deficit.
1919-1920	1,251	1,699	448
1920-1921	1,033	1,298	265

In both cases the deficit is the result of the extraordinary war expenditure, and it is expected, therefore, that in the near future income and expenditure will balance. The number of factories established since 1917, according to official statistics, amounts to 63, of which 30 are for foodstuffs commodities, 2 for cloth, 1 for construction material, 8 for mechanical articles, 6 chemical factories, 12 for working out wood, 2 for leathers, 1 for tobacco products, and 1 for electrical articles. The industrial movement is not as active as was expected, and this is attributed, according to the official report, to the delays and irregularities in obtaining machinery from abroad, and to an unsufficient supply of materials. The merchandise imported from abroad during 1919 through the Port of Piræus amounts, in weight, to 683,655 tons, distributed, as regards the country of origin, as follows :—

	Tons.
United States	316,123
England	134,153
France	17,965
Italy	17,308
Other countries	198,106

During the last year 3,437 steamers entered the Piræus, representing a tonnage of 3,390,259 tons, and 8,005 sailing vessels, of a tonnage of 1,946,785 tons. The production of tobacco for this year is estimated at 20 million okes (about 26 million kilograms), not including that of three departments, for which reports have not yet been received. These estimates are considered as satisfactory.

SWITZERLAND.—THE EXPORT OF ELECTRIC ENERGY.

(FROM OUR CORRESPONDENT.)

GENEVA, October 16.

IN the very moment when the Swiss industry of electro-chemical products is in a serious crisis, owing to the fact that her customers in neighbouring countries are not in a position to pay Swiss francs for these commodities, the German industry of calcium-carbide uses electric energy imported from Switzerland to new works just near the Swiss frontier. The principal shareholders of these German works on the northern bank of the Rhine are Swiss companies. These Swiss companies find it profitable to shut down their carbide factories in the Alpine part of Switzerland and to concentrate production in their German plants. From the Swiss economists this increasing export of hydro-electric energy meets very heavy resistance. For example, the other day an hydro-electric power station in the East of Switzerland asked the authorisation to export 6,000 kilowatts to Germany for a Swiss-owned carbide factory at Waldshut. In this moment the Union of Metal Manufacturers of Winterthur declared that they are ready to take over the same current at the same price the Germans are offering, namely, one centime the kilowatt-hour. Now, another hydro-electric power station in Bodio, Southern Switzerland, asks the authorisation for exporting 8,000 kilowatts to the industrial district of Milan, Northern Italy. This district already imports 12,000 kilowatts from the hydro-electric power station of Brusio, Southern Grisons, but the latter power station is so situated that there is no possibility of making any use of this current in the interior of Switzerland. On the other hand, Bodio is situated on the Gothard Railway, and these 8,000 kilowatts hitherto drove chemical factories, making alloys for German steel works. Now, the currency situation stopped this Swiss industry, and it would be necessary to make a more than 140 km. line in order to transport the energy from Bodio to Central Switzerland. Therefore, the concern in question prefers selling the current to Italy. It is a remarkable feature that in the same time when Switzerland is importing highly expensive foreign coal she has to develop a new export industry owing to the lack of employment. It is one of the drawbacks of the use of hydro-electric energy that in certain periods of the year and in certain

hours of the day more electric energy is available than the local consumers can consume. In this way Switzerland, having an excess of hydro-electric energy, and being situated in the very centre of Europe, became an important exporter of electric energy. Unfortunately, this export does not much benefit the economic life of the nation.

DENMARK.—PRICE LEVELS—COAL IMPORTS—STOCK MARKETS AND EXCHANGES.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, October 16.

THE Danish Department for Statistics publishes twice a year a survey of commodity price movements, on similar lines to those which have been adopted by Sweden and Norway, so that a rational comparison can be made between the three Scandinavian countries. From July, 1914, to July, 1920, the rise in Denmark amounted to 162 per cent.; in Sweden to 170 per cent.; and in Norway (June instead of July) to 202 per cent. The last twelve months have shown a greater rise in Denmark compared with its two neighbours, but the price level had risen more before the middle of 1919 in these two countries than in Denmark, where there had been a number of price-regulating decrees in force. The only two countries which appear to have been exempt from a rise in prices during the year July, 1919-July, 1920, are Sweden and Switzerland, with their high and favourable exchanges.

The exchange problem continues to engross public attention, and the unfavourable effect of the expensive coal imports is the subject of much comment, efforts being made in more than one direction to substitute home-produced fuel wherever possible. The c.i.f. price of coal has risen from an average of 18 kr per ton before the war to 164 kr per ton for the first seven months of the current year. The aggregate expended on coal was 68,000,000 kr for 1914, and is likely to approach 350,000,000 kr for the present year, and that for a quantity only about two-thirds of the pre-war imports.

In August, 1920, the imports of American coal considerably exceeded those of English, the latter figure being 120,000-130,000 tons, against 200,000 tons from America. The quality both of English and American coal has deteriorated considerably of late. With economy, Denmark has enough coal to last until the end of the year. The Stock Exchange shows no signs of improvement; in fact, the trend is the other way, and among foreign exchanges marks are drooping, being quoted at 10.50 and as low as 7.50 in Stockholm. The £ is steady at 25.13, and Norwegian kr keep a point or two beneath Danish.

Letters to the Editor.

JUTE TRADE PROSPECTS AND THE NEW COMBINATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In an article on jute trade prospects, in your issue of October 2nd, you enquire whether the new combination, in which we, the undersigned, are interested, is likely to achieve success.

All you say about the growth of the export trade from India is no doubt true, but that does not affect our new combination to any extent, as we make an entirely different class of goods, which are not in competition with Indian manufactures.

We depend for our trade upon specialities, which India scarcely touches, and the writer of the article obviously overlooks this throughout the whole of what he has written, although even the statistics he cites bear testimony to the fact. Thus, his statistics show that the number of lineal yards of jute piece-goods exported from this country has declined since 1889-93, but they also show that the value has recently been increasing. The reason for this is that Calcutta has beaten Dundee in the manufacture and export of the commoner makes of narrow-width piece-goods, or gunny cloth, but that Dundee has increased the export of the wider or special cloths, and thus retained the value. As the writer admits, the average value of the Indian exports in 1913, before the war, was little more than 2¼d per lineal yard, while the British exports in that year were worth 4¼d per lineal yard. They are two different classes of goods, the lineal yard being much wider in the latter case than in the former.

Until late in the past century the export of jute cloth to the United States from Dundee was largely composed of "narrow Hessians," in the production of which Calcutta has since excelled. But while Calcutta has to a great extent captured this class of trade, the demand for the jute foundations for floor-cloth and linoleum has greatly increased, and it is that class of trade which Dundee is enjoying, and which is likely to go on increasing. It does not pay the Indian manufacturer to make anything but goods which he can turn out in immense quantities, such as cloth for gunny bags.

Your statistics do not include jute yarns, or jute carpets and rugs, in which Dundee does a large export trade, whereas Calcutta does practically nothing. The value of the yarn exported by Dundee for nine months ending September 30, 1920, was £1,898,602.

We may add that the statistics in the article for years since the beginning of the war—which show an increase in the value in spite of a decline in the number of yards, and of which you say they are "not without promise" for Dundee—have really very little bearing on the situation. Exports being absolutely prohibited during certain of the years of the war, the whole of the manufacturing capacity and energy of Dundee was directed to making goods to meet war requirements.

Moreover, your statistics, marshalled in an enquiry as to the probable success of our new combination, take no account of the home trade demand satisfied by Dundee, which is about equal in volume (not value) to the export trade. The competition in the home trade to be anticipated from India can only be felt directly, for the reason we have just given, where very large quantities of the same class of goods can be bought at the same time—a type of business in which our combination is not greatly interested, either in home or foreign trade.

You gather from your statistics that "it cannot be said that the trade did well during the quarter of a century ending 1913." This may be so, but the fact remains that, in the case of our combining firms, the ten years ending 1913 were on the average the best in our experience, and considerable additions were made during that period to the productive power of the combine.—We are, Sir,

(Thomas Bell and Sons, of Dundee, Limited).

FUNDING—A NEW SUGGESTION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—During the next ten years we have to find enormous amounts of money to replace the Treasury bills, War Bonds, and advances on ways and means now outstanding. I wish to suggest a method by which this money can be obtained by the issue of a stock free of tax and super-tax, at a low rate of interest.

The stock should be redeemable at the pleasure of either party, the Government or the stockholder, upon demand, with interest to date. This will keep its price permanently at par. The rate of interest can be kept low by imposing such an income-tax upon the larger incomes from other investments that their owners will find it advantageous to invest in the tax-free stock.

The capital belonging to persons with an income of £5,000 a year and upwards is, I believe, judging by the return Cmd. 224, at least four thousand millions. The problem is how to make it worth while for these persons to invest in stock which bears interest, say, at two and a-quarter per cent. Some people were content with about this rate in the good old days, when 2¾ Consols were at

114, and they can be made content with it again by suitably graduated taxation.

The partial graduation adopted in the Finance Act of the present year, though a step in the right direction, is by no means adequate. It graduates the very rich *inter se* hardly at all. If a more complete system were adopted, it would be quite easy to arrange it so that a person with a capital of £100,000 would find it worth his while to invest a large sum in the tax-free stock. It would be necessary, and is an essential feature in any such scheme, that his taxation should be graduated upon his taxable income only. If, for instance, his income in the first instance were £7,000, and by borrowing on his securities he reduced it to £2,500, his income for tax and super-tax purposes would be reckoned to be £2,500, and his effective income would be £2,500 minus tax and super tax, plus two and a-quarter per cent. net from investing the money he borrowed, and this could be made to come to more than the original £7,000, minus tax and super-tax.

In this way our debt could be gradually funded.

An enormous stock payable upon demand sounds risky, but the reasons making it worth while to subscribe would make it worth while to keep, and there would be no more likelihood of inconvenient demands for repayment than there is now of a run upon bank current accounts.—I am, Sir, your obedient servant, A. HOARE.

37 Fleet street, E.C. 4, October 19th, 1920.

CURRENCY AND PRICES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I ask Mr Wallis what he means by "inflation in prices"? Surely not that prices are so high that the country's or the world's production cannot be bought in its entirety by the income of the world's or country's consumers? For that kind of inflation must end automatically.

Mr Wallis considers the desire for higher wages as a "static stress." Has it indeed been so very "static"? The interesting "history of wages" published some time ago in the *Times* shows that wages have been multiplied by 149 in the last seven centuries and a-half. There must have been some dynamic force behind that change. Human desires, indeed, move the whole world and not wages only.

I will take for granted—as Mr Wallis does by the wording of his question—that it was a change in the currency system that made the rise in prices and wages possible. Indeed, as soon as paper currency took the place of gold currency the fall in the value of the unit of exchange became a much easier affair. Formerly a rise of wages most certainly did not always cause unemployment, even if there was not an equivalent rise in production. It is not a question of opinion, but of fact that, especially in the last 20 years before the war, the value of money has gone down at a remarkable rate. Also the amount of gold had very little influence on the prices of gold. The gold production increased, though the value of the monetary unit went down; but in relation to the world's monetary requirements, to the phenomenal economical development of the world, of North America and South America, and the extension of gold as the monetary unit in other countries, the gold production was by far too small. Leading bankers, especially in England, were crying out for more gold as the columns of the *Economist* in the years 1912 and 1913 will testify. But the fall in the value of money—the inflation of prices—went on. It was, of course, immensely accelerated by the war. And *one* of the causes was certainly the absolute necessity England and other countries were in to let go the rather ridiculous fiction that a cheque for gold or a banknote indeed represented gold and to end, what has been such a boon and blessing especially to international trade, the reign of the golden pound.

But I am absolutely convinced that if, without causing any panic, and by stretching as far as now the rules as to gold reserves, it could have been possible to retain the golden pound as the value of money, the value of gold would have gone down, perhaps quite as much, but certainly also to a very great extent. It is easy to prove this. The dollar is considered to have remained a golden dollar. Up till some time after the peace the value of the dollar had increased in relation to the value of the pound by about 20 per cent. And a pound of 1920 is only worth about one-third of what it was worth in 1914. During the war—but before America came into it—the Dutch paper money—not interchangeable—was at a premium of about 20 per cent. compared to the golden dollar. Which all goes to show that the value of gold was fixed by the value of the currency. And the value of the currency was fixed by quantity and quality of production in any country, and by the total amount of *incomes*, especially wages.

I believe Mr Wallis is mistaken where he says that if prices are too high because wages are too high, the only remedy is unemployment. A slight fall in the exchange, in the value of the pound, will have the same effect. As soon as prices are too high to sell to the foreigner exchange will go down. If unemployment comes, the result will probably not be a drop in wages, but a drop in the exchange price of the pound, a fall in the value of money. Wages never go down much. That is perhaps the only good thing about the loss of the golden pound. But, indeed, a very poor compensation. A. G. BOISSEVAIN.

Amsterdam, October 12th, 1920.

TO THE EDITOR OF THE ECONOMIST.

SIR,—We see by his letter in the *Economist* of October 16th that Mr Frank Morris satirically agrees with our appeal for an enlightening theory of prices and wages, on the humorous insinuation that we at any rate badly want enlightenment. Naturally, sir, we do not take quite such a despairing view of our benightedness as Mr Morris does; still, we do find some economic dicta a little obscure, and some modern suggestions for financial or industrial reform do seem to require some enlightening theory to make them comprehensible.

For instance, Mr Morris's theory that prices have been prevented from rising since 1913 by the necessary supply of credit not being available, is to us quite unintelligible. We thought prices had risen quite a good deal since then, and if there has been no increase of credit all we can say is that prices and trade seem to have done pretty well without it.

It seems, at any rate, that economic teaching does not afford light enough to enable us to understand each other's views on currency and prices. We think even Mr Morris would desire an economic theory that was more convincing to some people; such as the workers and the controllers of credit, for instance. But instead of arguing the theory we offer—which, by the way, he erroneously speaks of as Marxian, whereas it was held by Ricardo and probably Adam Smith, if not by the original Adam—he attempts to discredit it by calling it an obsolete fallacy. While he repeatedly and authoritatively asserts that we are wrong, he gives no hint of a reason why it is wrong, but claims that is almost axiomatic that value does not depend upon cost.

That is the worst feature of the matter, it has really never been regarded as anything else but axiomatic, and has never been substantiated by any evidence whatever so far as we can find. Yet there is nothing of the nature of an axiom about it, as shown by the conflicting arguments of economic writers. In Professor Gide's "Political Economy," written for the modern French student, and much used by students in this country, on page 56 of the third English edition, we find the Professor saying that the cost of production theory, and the final utility theory, each represent one side of the truth. So economic authority seems hopelessly incapable to decide which is the truth and which the fallacy.

Mr Morris shows us no reason for departing from our view that price is simply value expressed in terms of money, and nothing but value. We nowhere state that wages paid to gold miners alter the labour cost of any commodity. But while Mr Morris holds correctly that price is a relation between the value of gold and the value of commodity, it seems strange he cannot understand how an alteration in the cost of getting gold will alter the amount of gold that will be given for the goods, and so alter the price of the goods. That is what we mean by the price of commodity depending on the labour cost of gold relatively to the labour cost of the goods.—Yours faithfully, ALBERT AND PERCY WALLIS.

Westacre, Kettering, October 18th, 1920.

THE "TRIUMPH OF NATIONALISATION."

TO THE EDITOR OF THE ECONOMIST.

SIR,—Sir Leo Chiozza Money states in your last issue that the ghastly failure of the German State railways is due to Germany's defeat. That fact does not suffice to explain a deficit which is greater for one year than the entire cost of constructing the German railways or the combined profits made since their inception. The bureaucratic management of the German railways was fairly efficient under the former absolutism. Democracy and bureaucratic absolutism are, of course, irreconcilable. The railway officials, who formerly worked hard for a pittance, have become slack and rebellious, and are squeezing the State. Wages have grown tenfold, but they insistently clamour for more, and they are just now demanding another huge increase of pay with threats, notwithstanding the ruinous and ever-growing deficit. The State railways, which brought in only a very little profit before the war, will drive Germany into bankruptcy.

Bureaucratic management has proved a failure in all democracies where it has been tried, and Sir Leo ought to know this as well as anybody. He was a member of the Coal Industry Commission. Before that body Sir Charles Wade, Agent-General for New South Wales, who at one time was Premier of that country, and who therefore speaks with authority, stated:—

"Efficiency of labour depends upon an effective method of management and discipline.....In a disciplined, obedient country, such as Germany, good discipline on military methods could, doubtless, be enforced; but the position is very different in democratic countries..... Efficiency of labour was in inverse proportion to political influence.....When a strike takes place in a Government department because a workman has been discharged the Government position is difficult. If they resist the demands votes are imperilled; if they yield discipline is threatened.....Experience shows there is no stimulus to economy, or to reduce excessive staffs, for the prevailing feeling is that it is Government money that is being spent, and the taxpayer will pay.....State ownership encourages bureaucracy in the desire to avoid responsibility."

Sir Charles Wade's arguments are unanswerable, and they are supported by many Australians and New Zealanders who know the practical effect of nationalisation. It is rather curious that Sir Leo, who was a member of the Coal Commission, and who is a great student of Blue-books and other documents, should write a book on the triumph of nationalisation, seeing that that policy has been a universal failure in all the democracies which have tried it. The question, as I stated in my previous letter, is not whether nationalisation was successful during the recent war, but whether it is successful in peace, for peace, not war, is the normal thing. In his reply, however, Sir Leo tells us once more of the marvellous, but very problematical, success of bureaucratic management during the war period.

In conclusion, I would say that the policy of bureaucratic management, which Sir Leo recommends, is thoroughly distasteful to the workers in general. They have seen quite enough of officialdom not to desire the increase of its powers. Sir Leo and his friends recommend a thoroughly unpopular policy, unless, indeed, they confuse nationalisation and syndicalism, or, if they disguise the fact that they are in favour of the workers seizing the various enterprises, and owning and managing themselves, as the miners apparently wish to do. With them nationalisation does not mean the mines for the State, but the mines for the miners.—I am, Sir, your obedient servant,

J. ELLIS BARKER.

Albion Cottage, Fortis Green, East Finchley, N. 2,
October 19th, 1920.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It does not require a Latin tag to explain why Sir Leo Chiozza Money had to pay £16 for his suit. (Parenthetically, I may say I got one last week, good navy serge, made to measure, for £8. Mine is a decontrolled suit. Was his a controlled one?) It is merely a very ordinary case of cause and effect, which can be stated in every-day English. During the war the Government gave most people everything they asked in the way of wages, &c., with the result that the cost of production was run up to an unconscionable height. "Capital" also demanded proportionate profits, and it got them. The ideas of both Labour and Capital were elevated to a higher plane. When the war stopped neither party would reduce its ideas as to what it should get. Labour said it could not live on less, and Capital said it could not produce on less. The consumer said: "A plague on you both. I'll wear my old clothes." Sir Leo's reference to the "cheap" army clothing is quite irrelevant, as there was no competition with which to compare the Government prices. But if the Government is such an excellent trader, why has it been necessary to have so many autopsies on the actions of its trading boards? Sir Leo evades my charge that "the general result of the Government control of industry has been a huge indirect tax upon the consumer."—I am, &c., R. H. K. CLARK.

Bradford, Yorks, October 19th, 1920.

RENTS AND MORTGAGEES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The Press reports of the discussion on the Rents and Mortgage Interest Restrictions Act, 1920, at the Law Society's Conference in Liverpool contain only passing reference to the effect of the Act on mortgagees, and I would ask, is the owner of protected properties in the restrictions put upon his power of raising rents entitled to as much sympathy as the mortgagees of such properties? I think not.

Owners of decent houses have had, and still have, a good market in which to sell to tenants, or to other buyers who take the long view that scarcity prices must remain for some years. Instances are known to me where a property in mortgage at 4½ per cent. has been sold subject to the mortgage at more than twice the 1914 value, and the vendor has been able to avoid arrears of repairs and to re-invest the proceeds in State and municipal securities to yield over 6 per cent., or in fine Industrials to yield up to 10 per cent., while the mortgagee has been left with his security at the permitted rate. The seller of a house with vacant possession is often able to command any price up to 40 times the 1914 standard rent, and not a few owners of houses falling vacant have deliberately kept them empty for the purpose of getting "vacant possession" prices, and, it is to be feared, ignorant occupiers have sometimes been driven out of their houses by thinly veiled threats of illegal action.

I suggest that mortgagees of protected properties sold should have an extra interest allowance per annum over the legal rate according to a scale based on any selling price over the 1914 value; taking, if you will, the 1914 value as 20 years' purchase of the standard rent. Anyway, my point is that property owners should not be protected against a mortgagee when their selling values are so enhanced. I am aware that an occupying owner cannot claim the protection of the Rents and Mortgage Interest Act against his mortgagee, but that fact is not sufficiently well known amongst people who have lent money on the security of house property.

I hold that it would be better for the country if owners of mortgaged dwelling-house property within the Rents, &c., Restriction Act were rather compelled to sell, and if, at the same time, some national scheme were set up for assisting people to become owners of their own houses—possibly by compelling sellers to accept a fair proportion of approved purchase prices in State or Municipal securities, the buyers to pay the balance in cash. The State or the municipality would then become the mortgagees, and would hold the title deeds, presumably on some simple and inexpensive charge subject to instalment conditions of repayment of the advance. Machinery for giving effect to such a scheme, at once self-supporting and satisfactory, could be set up. And I would add, as part of any such scheme, the fire insurance by the mortgagee authority of non-hazardous risks, which, as everyone knows, is a very profitable business. Is there anything in it?—Yours, &c., COTTON.

Manchester, October 12th, 1920.

PRICES AND ENTERPRISE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In his recent memorandum presented to the International Financial Conference at Brussels, Professor Cassel points out that to reduce an inflation of 250 (100 representing the normal supply of money) would involve a depression of prices by about 3 per cent. per annum for a period of 31 years, and contends that the most probable result of such a policy would be "a more or less complete killing of industrial enterprise, and of the very spirit of economic progress." How does previous experience bear out this contention? During the 23 years between 1874 and 1896 there was a remarkable and practically continuous fall in prices. The index number for 1874 was 148, and that for 1896 only 80. (I take these figures from Mr W. T. Layton's well-known work on the "Study of Prices.") That works out at about 2½ per cent. per annum—not very different from Professor Cassel's own figure. What was the result? Mr Layton notes—and, in fact, it is notorious—that the arts of production made enormous strides, and, indeed, that they and the means of transport "probably progressed faster between 1874 and 1896 than they had ever done before" (p. 101). He concludes that nineteenth-century history "shows that national productivity depends much more upon the advance of science and discovery, and on the training, education, and organisation of labour, than on the rise and fall of prices." He suggests that while "booming prices tend to direct capital and labour into new uses, a continual depression of prices stimulates more economical methods in old ones." It seems to me, also, that a *general* fall of prices, which reduces outgoings in the same ratio as incomes, should have little or no adverse effect on profits, and that by increasing consumption as well as export, it should exercise a distinctly favourable influence on the national production. It is worthy of note that during this period real wages were continually rising, with the exception of the first six years, when they were nearly stationary (p. 151).—Yours faithfully,

October 11th, 1920. H. H. O'FARRELL.

Books and Publications.

LABOUR'S CHALLENGE.

"Labour's Challenge to the Social Order." By John Graham Brooks. Macmillan. 15s net.

THIS book reviews and describes, chiefly from the American point of view, the efforts of the wage-earners to better their lot in life. "The most intelligent," it says, "and energetic class of Labour no longer believes a word of the old economic warnings about those inflexible barriers as to hours and wages. They know there are limits, but they prefer to find them out by their own effort and experiment. The union organises its strength for such experiments, determined, like others, to get—what it can get. Labour is merely falling into line with the rest of us." It is a long, rather rambling, very interesting, and remarkably sane and open-minded presentation of the most important problem of our time. It is composed largely of the results of the author's studies at first hand of Labour conditions and notes of his conversations with employers, economists, and Labour leaders. It covers a wide field, from attempts at communist communities to the aspirations of the guildsmen of to-day. Its note is, on the whole, cheerful, and it is extremely readable, being comfortably free from the obscurities and jargon in which so many of our teachers on these matters insist on expressing themselves.

BANK AMALGAMATIONS.

"De Concentratie in het Bankwezen." Een bijdrage tot de economische ontwikkeling van onzen tijd. By Dr W. M. Westerman. (The Hague) Martinus Nijhoff. 12 guilders.

THE author, a well-known Dutch expert on finance, had not expected that this second edition of his work would have been required so soon. But, then, his countrymen have, as it were, an inherent aptitude for commerce and finance; hence they study all appertaining questions diligently. We can only regret that the circle of Dr Westerman's readers is limited to those acquainted with the language of the Netherlands. His subtitle, "A Contribution to the Economical Development of Our Time," shows the light in which he treats the amalgamations of banks. He traces their history in England, France, Germany, and Holland, discusses the *pros* and *cons* from financial, economical, and social viewpoints, offers some criticism, also on the methods of drawing up published bank accounts in England as well as France and Holland, and though he is not heedless to the dangers which the community may run by further concentration of bank power, he observes nowhere yet the formation of a money trust. The application of the modern fit for nationalisation to banking, he not only considers unnecessary, but dangerous (a view also expressed in a long report of a committee which the Dutch Social Democratic Labour Party appointed to inquire into the whole question of nationalisation). A long list of reference books is given, also the report of the Treasury Committee on Bank Amalgamations, but an index is lacking—the only fault we have to find with this informative and suggestive book.

AN EDUCATIONAL SURVEY.

"The Education Department and After." By Sir Geo. Kekewich K.C.B. Constable. 21s.

THIS is substantially an apologia for Sir George Kekewich's administration of the Board of Education from 1890 to 1902. At the latter date he was asked to resign in favour of Morant, whose own Education Bill had just been passed, and had to be put in force by someone strong, active, and favourable to the new policy. This termination of his official career colours, of course, the author's whole account of it. But it remains a useful record of a period in which the narrow educational system inaugurated by the School Board Act of 1870, with the Code of Payment by Results, had to give way to the wider ideas which came into force at the turn of the century.

Of the many good stories which enliven the book, the newest and most extraordinary is the account of Lord Salisbury coming to a conference on "assisted" education and proposing that every inspector, when visiting a school, should take with him a bag of Postal Orders of varying amounts, and hand one to every child who had attended a certain proportion of the school meetings. Not the necessitous, but the punctual child was to be "assisted." For an example of the crudity with which for so many years the education of the people was administered by the "governing classes," that story would be hard to beat.

BOOKS RECEIVED.

High Prices and Deflation. By Edwin Walter Kemmerer. With an Introduction by Frank A. Vanderlip. (Princeton, N.J.) University Press.

BARCLAYS BANK
LIMITED

(with which has been amalgamated the **London Provincial and South Western Bank Ltd.**).

Head Office: 54, Lombard Street, London, E.C.3

This Bank is in close touch with leading Bankers in all parts of the world, and provides facilities for the financing of every description of Overseas business.

Traders interested in the Foreign Markets are invited to correspond with
THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
October 27.	October 28.

Considering the overwhelming menace of the Labour outlook, the general trend of the stock markets was surprisingly cheerful for the first four days of the week. Business was never heavy; that was not to be expected. But there was at no time any sign of a wave of liquidation. On Monday there was some general marking down, which was more in the nature of a precaution than anything else. But by the time mid-week was reached a considerable rallying power was exhibited in a number of sections, as hopes of strike settlement or limitation raised their heads. Naturally enough, markets generally suffered reaction yesterday on the darkening of the outlook by the railwaymen's grave decision and the transport workers' threat. Gilt-edged stocks have shown, on the whole, a strength that was redolent of confidence in a speedy solution of present difficulties. The new Local Loan issue was quoted for the first time on Monday, closing on that day at $\frac{9}{16}$ discount, but thereafter improved. The comparative failure of this issue —70 per cent. being left on the underwriters' hands—is not worse than was expected in view of economic happenings. The severe check to exports sent American and Continental exchanges in our disfavour, and thus caused advances in dollar stocks and an improvement in a section of the Foreign market, Belgian Threes and French Government issues being prominent. Home Rails have mostly been dull, and naturally were not brighter on the threats of the N.U.R. of a sympathetic strike on Sunday night. The Foreign Railway section showed an irregular tendency, Argentines being inclined to fall away in spite of the excellent nature of the annual reports. Mexicans showed a small improvement, but the Brazilian group was idle.

In the Industrial section iron and steel shares were weak at first, but have rallied towards the end of the week, though only a small amount of business has been done, a very little buying being sufficient to send up quotations. The same remark applies more or less to all industrials. Shipping descriptions were for the most part flat, and cable issues were mostly steady. There were a few declines in the Motor list, and Textiles were quite inactive, though Courtaulds have been a fairly strong market. Business in the Rubber share market has been very quiet, but what shares have come upon the market have been readily absorbed. The market for the raw material has been steady, with a slight tendency to improvement. Business in Oils has been fairly active and prices firm, a feature being the advance in Anglo-Egyptian "B" on rumours of further important concessions.

Mining markets have been stagnant, but prices of Kaffirs have shown no particular weakness, in spite of the fluctuations in the price of gold. The quotations of Johannesburg Consolidated and some of its subsidiaries improved on the satisfactory nature of the cabled reports of developments for the September quarter.

To complete our record of new issues, company secretaries are requested to furnish us with copies of new prospectuses. Our readers can also assist by forwarding copies of prospectuses which may fall into their hands.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

5-15 Year Treasury Bonds, repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. These are still on offer. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

Explosives Trades, Limited. — Authorised capital £18,000,000, of which £15,549,562 has been issued. This is an issue of £3,000,000 8 per cent. seven-year secured notes at 96½ per cent., due November 1, 1927, and payable at par. The company reserves the right to redeem the whole of the notes at any time after November 1, 1922, at 101, on giving three

months' notice. The company was incorporated in 1918 for the purpose of merging the interests of a number of companies engaged in the manufacture of explosives, but it is now stated that 60 per cent. of its capital is employed in the manufacture of commodities other than explosives, and in consequence the name of the company is to be changed to "Nobels Industries, Limited." The combined assets of the company and its constituent companies amounted on December 31, 1919, to £13,853,853, and net profits are shown for one year—the year ended December 31, 1919—as £1,416,665. The company agrees to transfer to the British Overseas Bank, who are acting as trustees for noteholders, as security for this issue shares to the value of £6,623,000, and the company further agrees to maintain the value of security in the hands of the British Overseas Bank at this figure. There are no debentures at present, and none can be created, except by consent of noteholders. Important constituent companies will be restrained from mortgaging assets. Helbert, Wagg and Co., Limited, has underwritten the issue at 4½ per cent., plus the sum of £5,000 as part of contribution to advertising expenses. These notes are abundantly well secured as regards capital. As profits beyond the year mentioned above are not stated, and many companies are evidently changing the nature of their productions, in some aspects it must be looked upon as a new undertaking.

Electrolytic Zinc Company of Australasia, Limited.—Authorised capital £3,000,000, divided into 1,500,000 cumulative participating preference shares, and 1,500,000 ordinary shares. This is a statement of affairs in accordance with the requirements of the Committee of the Stock Exchange, but it is stated that 900,000 8 per cent. cumulative participating preference shares have been offered for subscription to the shareholders of the constituent companies. The advertised statement informs us that the company has been formed to carry on the production of metallic zinc by the electrolytic process. Already 750,000 ordinary shares have been issued for cash to the undermentioned companies:—Amalgamated Zinc (De Bavay's), Limited, North Broken Hill, Limited, Broken Hill South, Limited, and the Zinc Corporation, Limited. The statement proceeds: "350,000 fully-paid ordinary shares (hereinafter referred to as 'deferred ordinary shares') will be issued to the Mount Read and Rosebery Mines, Limited, or as it may direct, as consideration for the sale to the Electrolytic Zinc Company of Australasia, Limited, of the Hercules, Primrose and other mines and plant situate near North Dundas, Tasmania. These 350,000 shares will be deferred as to any dividend payable before July 31, 1925, but thereafter will rank with the other ordinary shares." The participating rights consist of an equal distribution of profits after both ordinary and preference shareholders have received 8 per cent. dividend. Preference shareholders have full voting rights, but the directors in article 47 of the articles of association have powers to issue debentures as they think fit. It should be noted that the company is incorporated in Victoria, Australia, and that the directors all appear to be residents in Australia. This is an interesting linking-up of interests, and will probably be supported by shareholders in the various companies concerned.

Steaua Romana (British), Limited.—Authorised capital £2,025,000, divided into 2,000,000 ordinary shares of £1 each and 500,000 deferred shares of 1s each. This is a statement for public information only, and no shares are offered to the public. We extract the following information from the advertised statement:—The company was incorporated in October, 1920, for the purpose of entering into a contract between Messrs Stern Brothers, Messrs James Dunning and Co., and the Anglo-Persian Oil Company, Limited, relating to the purchase of 24,950 fully-paid shares of 500 lei each in the Steaua Romana Societe Anonyme pour l'Industrie de Petrole of Bucharest. The entire capital of the latter company is 100,000,000 lei, divided into 200,000 shares of 500 lei each, and of these 100,002 shares—giving control of the company—have, with the approval of the British and French Governments been purchased jointly by Roumanian, French, and British syndicates. The profits are to be applied, in the first place, to the extent of a cumulative yearly rate of 8 per cent. in payment of preferential dividend on ordinary shares; secondly, to pay dividends amounting to £40,000 per annum on deferred capital, and of the balance, four-fifths of profits go to ordinary shareholders, and the remaining one-fifth to deferred shareholders. Ordinary shareholders have unusually limited powers of voting. The directors are responsible and experienced men who should be able to start the undertaking on a prosperous career.

J. and N. Philips and Co., Limited.—Authorised capital £2,200,000, of which £1,400,000 has already been issued. This is an issue at par of 700,000 8 per cent. cumulative "B" preference shares of £1 each. The company was incorporated in November, 1915, as a private company, with a capital of £1,000,000, to take over the business of Messrs J. and N. Philips and Co., general warehousemen, of Manchester and London. The undertaking dates back to 1747. In 1912 a subsidiary Australian company was formed. The company was converted into a public company, and its authorised share capital increased to 1,500,000 shares of £1 each, of which 700,000 have been issued as ordinary shares and are fully paid, and 700,000 have been issued as 6½ per cent. preference shares, also fully paid. In July, 1919, 400,000 preference shares were offered to the public at par, and over-subscribed. Since then the company has acquired nearly all the shares of Isaac Thorp and Sons, Limited, warehousemen. Profits are given from 1916 only. Surplus assets are valued at £1,621,109, exclusive of the proceeds of the present issue. In the balance-sheet for the year ended December 31, 1919, land, buildings, &c., are valued at £330,294. This item has been independently valued recently at £836,670. These "B" preference shares rank after 700,000 6½ per cent. cumulative preference shares. Although the margin of security is not very wide if abnormal values are not taken in account, the capital value of the share is secured. The statement of past profits cannot be considered satisfactory. With the exception of profits for 1919, previous years' results do not inspire intending investors with confidence.

W. H. Dorman and Co., Limited.—Authorised capital £700,000, divided into 350,000 ordinary shares, and 350,000 8 per cent. cumulative preference shares, all of £1 each. Exclusive of the present issue, capital to the extent of £500,000 has been issued. This is an offer at par of £300,000 8 per cent. participating seven-year notes at 95 per cent., and 50,000 ordinary shares of £1 each, at 22s per share. These notes are entitled to participate in profits at the rate of ½ per cent. for each additional 1 per cent. paid on ordinary shares in excess of 10 per cent., but the maximum interest on notes will be 12½ per cent., inclusive of the 8 per cent. now offered. The preference shares are entitled to a similar participation. The business was founded in 1870, and the present company was formed in 1897. Since 1911 the business has been under control of the present management. The company is widely known for its productions of excellent internal combustion engines. Unfortunately profits are given for three years only. Surplus assets, including proceeds of present issues, are valued at £883,239, this sum including £43,525 for patents, trade marks, and goodwill. Two other items are also included under assets, "Expenses of public issue (December, 1919)," £17,874, and "Wave transmission expenditure during year," £18,632. This issue of participating notes appears to be a reasonable proposition, and they are adequately secured both as regards repayment of capital and payment of 8 per cent. interest. If Dorman Wave Power Tools and Hele-Shaw Hydraulic Clutches prove successful, investors should not regret paying 22s for the ordinary shares, but at present they must be regarded as speculative.

The Army and Navy Co-operative Society, Limited.—Authorised capital £1,000,000, in shares of 10s each, of which £720,000 has been paid up. Offer to shareholders of 200,000 ordinary shares of 10s each at 32s 6d per share. This undertaking has made remarkable progress, and recently £648,000 was taken from reserves and capitalised. Including the present issue, the total paid-up capital will be £820,000. According to the balance-sheet of the company for the year ended January 24, 1920, net assets are valued at £1,363,702. To this must be added the proceeds of the issue, which should total £325,000. Thus, although based on recent dividends the shares may yield 10¾ per cent., on a valuation of assets the shares appear to be at least fully valued at 32s 6d. The present market quotations for the existing shares is 1⅝ to 1¾.

The Kern River Oilfields of California, Limited.—Authorised capital £1,500,000, of which £597,193 has been paid up. This is an issue to shareholders of 1,194,385 ordinary shares of 10s each, at 17s 6d per share. The present quotation for these shares is 1 7/16 to 1 9/16. Dividends have advanced progressively from 3¾ per cent. in 1913 to 17½ per cent. for the past year. According to the balance-sheet for the year ended May 31, 1920, the shares at 17s 6d per share are moderately covered by the disclosed assets. The present market quotation for the existing shares is 27s 6d, a price which would appear to be based upon speculative hopes.

Futurist (Liverpool), Limited. — Authorised capital £125,000, in ordinary shares of £1 each. The whole issue is offered at par, but the prospectus states that applications for 70,000 shares have already been received. The company was formed to acquire the City Picture House, of Liverpool. The vendor entered into a contract to purchase the property at £150,000, and agreed to resell to the company at £167,000. The amount payable for goodwill is estimated at £17,000. The theatre is independently valued at £166,202. Net profits for the year ended January 30, 1920, amounted to £21,979, but these figures make no allowance for excess profits duty and other expenditure. The difference between purchase price and capitalisation of company is to be bridged over by a mortgage of £50,000 for five years at 8 per cent. Preliminary expenses are estimated at £4,000, exclusive of money paid for placing shares. The directors are men who understand the industry, and they have been identified with successful undertakings. The issue is very speculative.

South Lancashire Theatre Company, Limited.—Authorised capital £35,000, in shares of £1 each. There are now offered for subscription 27,500 shares at par. The advertised prospectus states that the company has been formed to acquire a music hall known as the Hippodrome, at St Helens,

Lancashire. The theatre has been valued at £44,800, and the purchase price has been fixed at £30,000, of which £22,500 is payable in cash. From the meagre particulars advertised, it appears to be a reasonable proposition. But the issue should be left to friends of the directors and those with local knowledge.

Lever Brothers.—The recent issue of 4,000,000 8 per cent cumulative preference shares of £1 each has been fully subscribed, and it is expected that the allotment letters will be ready to post on Thursday next.

THE EXPANSION OF BANKING CREDITS.

We still have to use the above title in describing the general features of banking development during the year ended June 30th last. Restriction in banking credits has not yet been carried to the point at which actual reduction is secured, and it is open to question whether such a drastic measure as actual reduction might not have done more harm than good if it had actually been brought about. It is now generally agreed, though a few stalwarts still maintain the contrary view, that the expansion of currency and credits, by which distracted Governments took an easy short cut in financing themselves during the war, has produced evils which have gone far to undermine the stability of the world's economic fabric. The question is still discussed as to whether the expansion of credits or the expansion of actual currency issues was the more serious cause of the evils. The view that we have taken, and still hold, is that these measures have been jointly responsible; they are really two complementary sides of one problem, but the expansion of banking credits was actually the more fundamental evil, and caused rather than followed the expansion in the issue of legal tender currency. If this view is correct, it follows that the evils caused by the joint expansion of currency and credit cannot be effectively cured until the expansion of credit is first checked. If and when the volume of banking money is reduced, then, and then only, it will be possible to restrict and reduce the issue of legal tender currency.

The period covered by our review has been one of unusual difficulty for our banks, since they have been continually urged by theoretical critics and by official preachings that restriction of credit is necessary to produce that reduction in prices without which the social and industrial unrest now rife cannot be effectively remedied, and without which the country's trade in competition abroad seems likely to be met by very serious obstacles. On the other hand, the bankers have been subjected to continual pressure from their customers who wished to take advantage of apparently profitable opportunities to expand enterprise, and in order to do so made persistent demands for further credit from the banks. Thus the banks were between the devil and the deep sea. Increased output was demanded on every side. The cry for more goods as the most wholesome way of reducing prices was everywhere heard, and manufacturers and merchants thus had a very strong case when they went to their banks and asked for increased facilities in order to carry out the necessary expansion and so produce a greater volume of goods. The manufacturers and merchants were able to point out the many factors which made it difficult for them, if not impossible, to carry out the necessary expansion, unless they were granted expanded credits. Prices of commodities were still rising, and were involving a much greater outlay and a much greater lock-up in order to finance a given quantity of goods. Moreover, owing to shortened hours and reduced output, industry was working slowly, making the time during which credit was required to cover the process of production much longer than it had been; and when the goods had actually been produced, the congestion of transport facilities was again prolonging the time that they took between the close of the production period and their actual delivery to the consumer. There was another very important fact, that a great many potential buyers of the goods produced were unable to pay for them with anything like the former promptitude, owing to the impoverishment of many countries which had once been our regular customers, and owing to the general dislocation produced in markets abroad and the economic system of the world as a whole from the results of the war.

With these urgent reasons that customers, with first-class credit and with ample security to offer, could put before them when asking for increased credits, it was an extremely difficult position in which banks found themselves when they had to consider on the one hand these demands for increased credits, and on the other the obvious need for restriction involved by the nation's economic position. If they had acted too hastily in refusing the demands made upon them, they feared that they ran serious danger of disorganising the country's industry, preventing that production of goods on which its real prosperity depends, and causing general unemployment at a time when industrial bitterness was already quite sufficiently acute. They might very well have retorted to the official preachers who told them that the volume of banking credits must be reduced that these credits were originally expanded during the war owing to the action of the Government, and that it was the Government's business to set about this reduction by reversing the process initiated during the war, and paying off the banks the enormous sums that it had borrowed from them during the course of the contest. Our appended table shows that the banks included in it held in 1914 investments amounting to £115,500,000, and that this item has grown to £385,250,000 by June 20, 1920; of this £270,000,000, representing the increase in the investments of the banks during the period covered, there can be little doubt that a very considerable portion represents Government securities of one kind or another, which the banks, much against their will, were induced, for patriotic reasons, to take up during the war. Bankers, of course, knew well enough that their real business was to finance the trade of the country, that insofar as they had to take up Government securities during the war the ease and readiness with which they could finance industry when war was over would be impaired, and that with so much of their resources tied up in securities which were not easy to realise, the accommodation that industry would require after the war when it got back to business on the old basis would be found with very great difficulty, and could not be found at all if the policy of drastic restriction were carried out. For it must be remembered that the actual increase in their investments, insofar as it was due to their subscription to Government loans during the war, did not by any means cover the whole of the effort which the banks have had to make in order to facilitate war finance. Included in their loans and advances there is also a considerable sum advanced to customers in order to enable them to take up various Government issues. Clearly if a beginning of restriction had to be made, the obvious place for it to begin was in the department of Government finance.

If the Government could have succeeded by a successful funding operation in inducing the public to subscribe real saved money, not money borrowed from its banks, in order to redeem debt held by the bankers, then it would have been possible for the banks to restrict and perhaps even reduce credit, and at the same time meet the legitimate demand of their industrial customers. But, as we all know, the Funding loan and Victory bonds of 1919 produced extremely meagre results, and the old bad system was adopted, and strong pressure was brought upon the banks to induce them to subscribe to these issues, when what was really desirable was that the holding of Government securities by banks should be reduced out of money subscribed by the general public. Insofar as this was done the banks' deposits would have been reduced, their holding of Government securities on the other side of the balance-sheet would have been reduced *pari passu*, and their cash in hand would have remained the same, thus enabling them, to the extent to which this operation had been carried out, to meet the legitimate demands of industry, replacing the Government securities that had been paid off by advances to producers and merchants, and so financing trade instead of the Government, without causing a net addition to the amount of their deposits. In fact, the country's debt actually increased by nearly 100 millions between June 30, 1919, and June 30, 1920, and the increase in the home debt was still greater, as there was a reduction of 80 millions in Other Debt, or debt held abroad; and the investments held by the banks have actually risen by some £45,000,000 during the year under review. If reduc-

* Includes Money at Call and Short Notice.

tion of their Government securities by funding was impossible, the banks might have been able to rid themselves of the incubus of their Government securities if the public had been more ready to buy them and if the market for them had been in a more robust condition. As it was, the weakness of the Government issues made during and after the war has been one of the most uncomfortable features of the post-war position, and bankers had some justification in attributing part at least of this weakness to the action of the Government in raising the rates at which it offered its Treasury bills for sale, so practically making an advance in Bank Rate necessary at the same time. Ever since the war both the public and the bankers have had only one experience with Government securities—they have lost money by them. This may have been an inevitable necessity, but it need not be said that it has not made the Consols market by any means a happy hunting ground for investors. Consequently the bankers were only able to diminish their holding of Government securities by sales involving heavy losses, and the whole story of their difficulties during the period covered may ultimately be traced to the bad effects of bad Government finance carried out during the war. Besides these difficulties the banks were faced by an increased demand for cash, that is to say, for legal tender currency on the part of the general public, which is probably to some extent due to the more even distribution of wealth, which is one of the few good economic results of the war, and has transferred buying power from those classes which have banking accounts and pay their way by cheque, to those which have not yet become accustomed to the use of this facility. During the year under review the Bank of England increased its note issue by just over £30,000,000 and its actual note circulation by just over £40,000,000. During the same period the currency notes outstanding advanced by £14,500,000, and the increase shown in the other deposits at the Bank of England was £9,000,000. It must be remembered, in considering the significance of this last-named figure, that other deposits include many accounts besides those of the banks; but when we see these increases in legal tender currency and cash at the Bank of England, it is somewhat surprising to find that the banks whose accounts we analyse on the previous page show an actual decrease of £40,000,000 in their cash in hand and at the Bank.

Faced by all these difficulties—a reluctant increase in their holding of Government securities, inability to market with any satisfaction the Government securities they had to take up during the war, and increased demand for currency on the part of the public and a continual claim for new credit on the part of customers who could show the best possible reasons for further expansion—the banks can at least claim that they did not, during the period covered, expand credit with anything like the rapidity that had been shown in previous years. The increase in the deposits of the banks included in our table, which are those of the principal English banks which publish figures in the middle of the year, was as follows on the following dates :—

	Increase Million £.
June 30, 1915	196·6
„ 1916	44·5
„ 1917	81·1
„ 1918	282·5
„ 1919	406·2
„ 1920	105·5
	1,116·4

As the pre-war figure of these banks at June 30, 1914, was £751,000,000, it will be seen that there has been a total increase during the five years of 149 per cent. There has also been an increase on the liability side during the same period of £47,400,000 in capital and reserves—a highly satisfactory development—while acceptances and endorsements have risen by just £50,000,000 from £37·6 millions to £87.8 millions. On the other side of the balance-sheet the increases were as follows :—

	1914. Mill. £.	1920. Mill. £.	Increase. Mill. £.
Cash in hand and at the Bank of England	116·7	300·9	184·2
Investments	115·4	385·2	269·8
Discounts and advances	573·6	1,281·5	707·9
Cover for acceptances, premises, and sundries	53·5	105·6	52·1

Returning now to the figures of the past year, that is from June 30, 1919, to June 30, 1920, we find the following movements :—

	1919. Mill. £.	1920. Mill. £.	Inc. or Dec. Mill. £.
Capital and reserves	95·5	118·0	+ 22·5
Acceptances	62·1	87·8	+ 25·7
Deposits	1,761·9	1,867·4	+105·5
Cash in hand and at bank	341·2	300·9	— 40·3
Investments	340·2	385·2	+ 45·0
Discounts and advances	1,163·4	1,281·5	+118·1
Cover for acceptances, &c.	74·7	105·6	+ 30·9

The most notable features are the decreases in cash and the increases in investments, discounts, and advances among the assets and the increase in deposits among the liabilities. In some cases the discounts include holdings of Treasury bills, while other banks put them among investments. A good deal of guesswork is thus necessary on the part of those who try to trace the actual changes in the resources of the banks. For the further information of those who engage in this fascinating pursuit we append the following exposition of the Bank of England's position at the June half-years. These figures also are full of pitfalls for those who try to draw definite inferences therefrom :—

THE CREDIT PROBLEM IN AMERICA.

BANKERS in the United States have lately been faced with a problem very similar to that which has troubled their British brethren, though the position there is different in two important respects. In the first place, America has gained great wealth through the war, whereas we have been impoverished, and consequently the situation requires less careful handling on the other side of the Atlantic: America is cutting up its war melon, England is trying to repair war damage. In the second place, America is on a gold basis, and so the banking position is less artificial than it is here. There, as here, however, bankers have been accused of treating their business customers with less consideration than they deserved, of co-operating readily with business when times are good, but withdrawing assistance when hard times come.

In answer to these charges a very instructive address was delivered by Mr James S. Alexander, president of the National Bank of Commerce in New York, before the annual Convention of American Manufacturers' Export Association, held in New York on October 14th. Mr Alexander began by discussing the relationship between business and banking. "The banking credit," he said, "of the country as a whole is, in effect, a public utility, a great national resource, constituting the country's chief instrument of business. In handling its portion of these resources, therefore, a bank becomes a semi-public institution with heavy responsibilities not only to its own stockholders, but to its depositors, and also to general business welfare. These responsibilities impose the obligation upon the banks to exercise sound judgment in credit policy, and to determine whether general conditions as well as specific expediency require liberality or conservatism in making loans . . . Bank co-operation with business may be classed as of two kinds; first, direct co-operation through extending

An American Banking Connection

TO those interested in the development of trade with the United States and the establishment of permanent markets there, a banking connection will be valuable to the extent that its American service is efficient and comprehensive.

The Guaranty Trust Company of New York offers its facilities for complete international banking to firms of standing engaged in the American trade. Its financial service is based upon the unusual comprehensiveness of its organization in the United States and the knowledge of the needs of British industry and commerce which it has gained in the twenty-three years it has been established in Great Britain.

The Officers at any of our three English offices will be glad to discuss with the merchant his problems of finance and to describe our facilities in detail.

credits, and secondly, indirect co-operation through maintaining the integrity of the general business situation. In the matter of extending credits, sound banking requires an analysis and judgment of each specific credit risk, involving careful consideration of the financial set up and the ability of the management of the particular company seeking the loan. It also requires analysis and judgment as to conditions in the concern's particular field of activity for the purpose of determining whether those conditions indicate that it will be able to carry out its business projects. Only when it is satisfied on these points is a bank called upon to give direct co-operation by granting the loan. Indirect co-operation with business on the part of banks takes a broader view than is required in this detailed consideration of individual transactions. It is the duty of the banks, and a part of their co-operation with business, to keep themselves thoroughly informed at all times as to the general business and economic situation and as to the relationship of the general credit structure to the nation's reserves. Also it is the duty of each bank to keep its own condition continually in mind, because its own credit structure is a part of the credit structure of the nation, lending strength or weakness, as the case may be, to the total situation. It is the prime duty of a bank to remain sound and liquid, so that there shall never be any hesitation in meeting its demand obligations. A commercial bank depends for its own solvency upon the solvency of its borrowing customers, and the solvency of its borrowing customers depends not only upon their financial structure and their management, but also upon general business and economic conditions. Therefore, when the banks realise that the business situation is becoming unduly expanded, and that the necessity is approaching for a contraction in the business structure, it is their duty, both to themselves, to their customers, and to general business welfare not only to apply with the utmost care all of their means of analysing and judging applications for accommodation, but also to counsel conservatism in business operations. The banks owe it to business not to allow themselves to become embarrassed. Nothing is more potent in bringing on a state of depression, nothing is more destructive to public morale, than the closing of the doors of banks. Therefore, they should be quick to anticipate prospective trouble. They should exercise premature rather than tardy caution. Even under the Federal reserve system there is a point in credit expansion beyond which it is not safe to go, especially when the liquidity of credit has become impaired. A bank which over-extends itself has less real regard for the interest of business, and is really co-operating less with business, than one which frankly counsels and practices conservatism when conditions require such action. It is far better that many business concerns should contract their operations for a time, if need be, than that a bank should become embarrassed through over-extending itself to grant them unwise accommodation. I say this not only from the viewpoint of a banker, but rather from the viewpoint of any business man who has the foresight to consider his business interest in the long run, and not only in its immediate aspect. When general business conditions become critical it is not the duty of the banks to attempt to force a continuance of activity by artificial stimulation. It is not their duty to provide funds for expansion when business prudence counsels conservatism. It is rather their duty, and their best form of co-operation with business, to do their utmost under such conditions to persuade their customers to curtail borrowings in the interest of the general situation. But I do not mean to say that the banks do their full duty by preaching conservatism and practising curtailment. Where their own position warrants it they should lend freely to enable solvent concerns to meet their quick liabilities. It is their business and their function to assist solvent firms to mobilise slow assets, but it is not their duty to validate bad assets of insolvent firms."

This clear exposition of the general problem was followed by a very interesting review of the change in American banking produced by the Federal Reserve system. Then Mr Alexander came to the present situation and its needs: "The great financial feature of the present business era was the tremendous inflow of gold into this country accompanied by a rapid expansion of our credit structure. In fact, great as was the increase in our gold base, the expansion of our credit structure far outran it, so that we witnessed a continual dwindling of the reserve ratio. This credit expansion was caused by Government war paper, by great commercial activity and by European credits. Yet, although the falling reserve ratio called for careful attention, it was not the chief cause of anxiety, for we have passed beyond the stage in our financial development where we believe that a fixed ratio is necessary. The chief weakness in our situation was caused by the non-liquid character of a large part of the credit structure produced by the necessity of financing by long time credits war goods that were rapidly destroyed, leaving the credit structure expanded without a complete physical base to support it. Under normal conditions consumption goods are financed by short, self-liquidating credits, which are released to finance new oncoming cycles of production as the goods they are used to finance pass on into consumption. In the war period after a large volume of goods, financed by long time credits, had disappeared into consumption, the long time credit still remained a load upon our banking resources.

"While our credit structure was in this highly expanded and largely non-liquid condition, abnormal shortages of goods and extravagant public buying produced higher prices, higher wages, speculation and inflation. Finally, the difficulties of the situation were augmented by the transportation breakdown which rendered our credit even less liquid by delaying the turnover of goods and the paying off of loans.

"In this complex situation the volume of gold in this country began to shrink as we continued to sell to Europe on credit, but paid cash to other parts of the world where the balance of trade was against us. The result of all these factors was a very heavy pressure on our credit resources, making it advisable for the banks to conserve their positions with the utmost care. To do so was the best service they could render business, for business more than ever needed strong banks. Weakened banks would have meant disaster.....Seen in its true light, the attitude of the banks has been the only true co-operation possible." Finally, Mr Alexander made the following observations on the prospects of foreign trade:—"A comprehensive view of the foreign situation indicates that the real and basic need of Europe is for our raw products. She needs them to re-establish her own industries upon a fundamentally productive basis, increasing her export powers so as to liquidate her adverse balance of indebtedness. Her need is for raw products rather than for many classes of our manufactured products which during the war period she had to purchase from us, but which, as her own industrial organisation is rehabilitated, she can increasingly produce for herself without reliance upon us.....

"Also in financing our foreign trade we must not lose sight of our business situation as a whole. We must not finance our foreign trade on a basis that will perpetuate over-expansion in our domestic banking credit. The great bulk of Europe's debts to us is in the form of long time credits or of commercial credits which it seems impossible to realise on at once. This is a serious element of non-liquidity in our credit structure. If it is necessary to readjust our domestic credit situation, our foreign trade also must be subject to that necessity. The liquidity of our commercial credit structure should be a chief concern. Therefore, it is one of the pre-eminent duties of the banks to encourage a return as fast as possible to reciprocal foreign trade in equilibrium financed by liquid credits.

"The most desirable foreign trade is that with countries which give most promise of being able to re-establish their own productivity, and to regain at the earliest moment the ability to liquidate their debts here with goods. It is also but the part of wisdom to favour, in our trade with those countries, such products of ours as will serve most rapidly to help them return to a condition of economic stability."

PRESENT-DAY BANKS AND THEIR CUSTOMERS.

(BY A CLEARING BANKER.)

WHAT effect have recent banking developments had upon the relations between banks and their customers? How are these customers affected by such changes as wholesale amalgamations, the establishment of foreign branches and agencies, the acquisition of controlling interests in foreign, colonial, Scottish, and Irish banks, and the extension of foreign exchange business?

By far the most important class of customer is composed of commercial and industrial concerns, and it is the members of this class who have been and are the chief gainers by the striking banking developments of the last four years. But for the big amalgamations commercial and industrial customers who wished to borrow would have had, in many cases, either to change their bankers, often a disagreeable and inconvenient thing to do, or to "split" their accounts, usually an unsatisfactory expedient both for customer and banker. A simple case in point may be cited. In that case negotiations had been completed for the absorption of a comparatively small provincial bank. Before the proposed amalgamation had been announced the largest customer of the bank approached the management for a large temporary advance. The proposed advance would have been sound and profitable, but it was beyond the power of the bank to grant the accommodation; it simply had not the necessary funds. The absorbing bank was advised of the situation, came to the rescue, and itself lent the money. When it is remembered that the tendency to amalgamation has been every whit as operative in the case of commercial and industrial companies as among banks themselves, it will be seen that bank amalgamations are not merely a fashion or a freak, but a necessity, if the legitimate requirements of the larger customers of the banks are to be met.

In other ways such customers have benefited. Apart from the greatly increased facilities afforded for the rapid, cheap, and easy transmission of funds over a wider area, the linking up of British banking interests with those of foreign, colonial, Scottish, and Irish banks has enabled the joint-stock banks to give, direct, facilities which before were given indirectly only, with more trouble and greater expense to customers having business relations with the colonies, foreign countries, and remote parts of the British Isles. To take one instance only; a firm which previously had accounts with British, French, and Spanish banks can, and frequently does, now make one British bank, with its branches or connections in France and Spain, serve for all its purposes, to the simplification of its book-keeping and the saving of expense and trouble.

This "linking-up" process, internal and external, is, however, not without its disadvantages. One sometimes wonders whether the central direction and the general management of our huge amalgamated banks have been fully adjusted to the new conditions which they have themselves created; whether the administration of these big banking companies is, as yet, as efficient as was that of the smaller concerns of which they are composed. There are signs, however, that this aspect of the case is realised in the proper quarter, and that the directors and general managers of the big banks are rapidly accommodating themselves to the new conditions, and organising their businesses into greater efficiency. One contingency to be guarded against in these cases is that each of the chief officials may become so absorbed in the administration of the department or section of the business which is under his immediate care that he has no time, or not sufficient time, to devote to questions of general policy and to matters of administration as a whole. The chief officials of any large enterprise should always have "a clear table," with all that this implies. The huge amalgamated banks need at their head men who "see things steadily and see them whole," and there is evidence that in our big banks a process is going on analogous to that which took place in the case of Kipling's "Ship that Found Herself." The desirability of such a process being once realised—and it is in course of realisation—the resourcefulness of those who constitute the central driving and directing force of the banks may be trusted to convert such realisation into appropriate action.

But if we are to grant that, on the whole, the larger customers benefit by recent banking changes, what are we to say of the case of the small customer; the farmer or other agriculturist, the shopkeeper, the small trader generally? Their case has often been represented—rarely by themselves; generally by self-constituted champions—as amongst those suffering from these changes, and especially from bank amalgamations. To the small bank which used to conduct their banking business, and which has now been taken over, each of such customers was a personality, and his needs were known, studied, and catered for. To the big absorbing bank, it is alleged, he is, if not a cypher, a name only, and his requirements are said to be less understood and studied than they were under the old *régime*. The present writer holds no brief for amalgamation, but he feels bound to state emphatically that, in his experience, which has been long and fairly extensive, this is not a true bill. Take the case most frequently referred to in this connection, that of the farmer. During the greater part of the war farmers needed little banking accommodation. Instead of borrowing, as of old, they generally kept comfortable credit balances. Since that war bankers have been particularly liberal to farmers in the matter of accommodation; indeed, it is open to question whether some banks are justified in the extent of the advances which, often on exceptionally moderate terms, they have made to their farming customers to enable such customers to buy their farms. One thing, at any rate, is true of the small farmer, the small shopkeeper, and the small trader alike. During and since the war their requirements from amalgamated banks have been explained to and put forward to headquarters by the same local managers as before; they have been dealt with by the same officials at the head office, and have received as full and as liberal consideration. If of late the small farmer or trader has not always obtained the accommodation which he expected, it is because his expectations were not justified.

The last case to be considered is that of the private individual who uses his bank mainly for paying in and drawing out money and for other routine purposes. In point of numbers these are the customers who constitute by far the largest section of the supporters of every bank. In the main such customers have only benefited in general ways, such as increased and cheaper facilities for the transfer of funds from recent banking changes. Indeed, so far as amalgamation is concerned, it has subjected all of them to the inconvenience and annoyance arising from the inordinate length of the names of some of the amalgamated banks. One realises, of course, that for obvious reasons it was desirable at first, in most instances, to preserve some part of the name of an absorbed bank. It would obviously have been difficult, for example, for the London County Westminster and Parr's Bank to drop either "County," "Westminster," or "Parr's," for each word carried with it an important element of goodwill. Even in this, the most difficult case, some solution of the irritating problem offered by so cumbrous a title should now be practicable, and such solution is rendered less difficult by the fact that whatever may in future be the title of the bank, its more important branches in the North will still be known as "Parr's" and its Western branches as "Stuckey's," and so on. The problem of the London Joint City and Midland and of the National Provincial, &c., Bank is easier of solution. Why not call them the London and Midland Bank and the National Provincial Bank respectively, and have done with it? Would a single customer or shareholder of the old City Bank or of the London Joint Stock Bank be aggrieved now by the omission of the words "City" or "Joint" from the title of the former institution? Would a single account be lost, and would not the constant irritation caused by the repeti-

James A. Stillman, President

FOREIGN branches of The National City Bank of New York, and of the International Banking Corporation are located in 81 foreign cities. This world-wide organization places the Bank in a position to render, especially to its European clients, a complete and highly developed international banking service, which includes:

Handling of collections throughout the world.
Discounting bills.
Issuance of advice of commercial letters of credit.
Caring for all phases of foreign exchange transactions.
Lending organized assistance in the cultivation of foreign markets.
Supplying reliable credit information.

OUR Eastern and Caribbean branches do a general banking and exchange business. With ample resources, and an experienced staff they offer and are prepared to give exceptional service of an international character to importers, exporters, merchants and manufacturers having or desiring to develop business overseas.

The National City Company

AMERICAN INVESTMENT SECURITIES

THE NATIONAL CITY COMPANY, an affiliate of the National City Bank of New York and of the International Banking Corporation, offers through its London Office to British Bankers, Brokers and others the facilities of its entire international organization for executing the purchase or sale of investment securities issued or to be issued in the United States. These facilities include those of its more than fifty offices located in the principal commercial and financial centers of the United States, many of which are connected by about 10,000 miles of private telegraph wires with the main office, 55 Wall Street, New York, N. Y.

Correspondence is invited from Bankers contemplating the placing of new issues of securities in the United States, or the sale of blocks of issues already outstanding.

tion in correspondence, &c., of an unnecessarily long title be avoided?

Recent banking developments, for good or ill, have been inevitable if the banks were to keep pace with the constitution and requirements of other forms of business. It is for those who are responsible for the administration of the banks so to frame and carry out their future policy that increased facilities and further benefits to their customers may result and may bring as little attendant inconvenience as possible.

BANKING AS A CAREER.

(BY A BANKING CORRESPONDENT.)

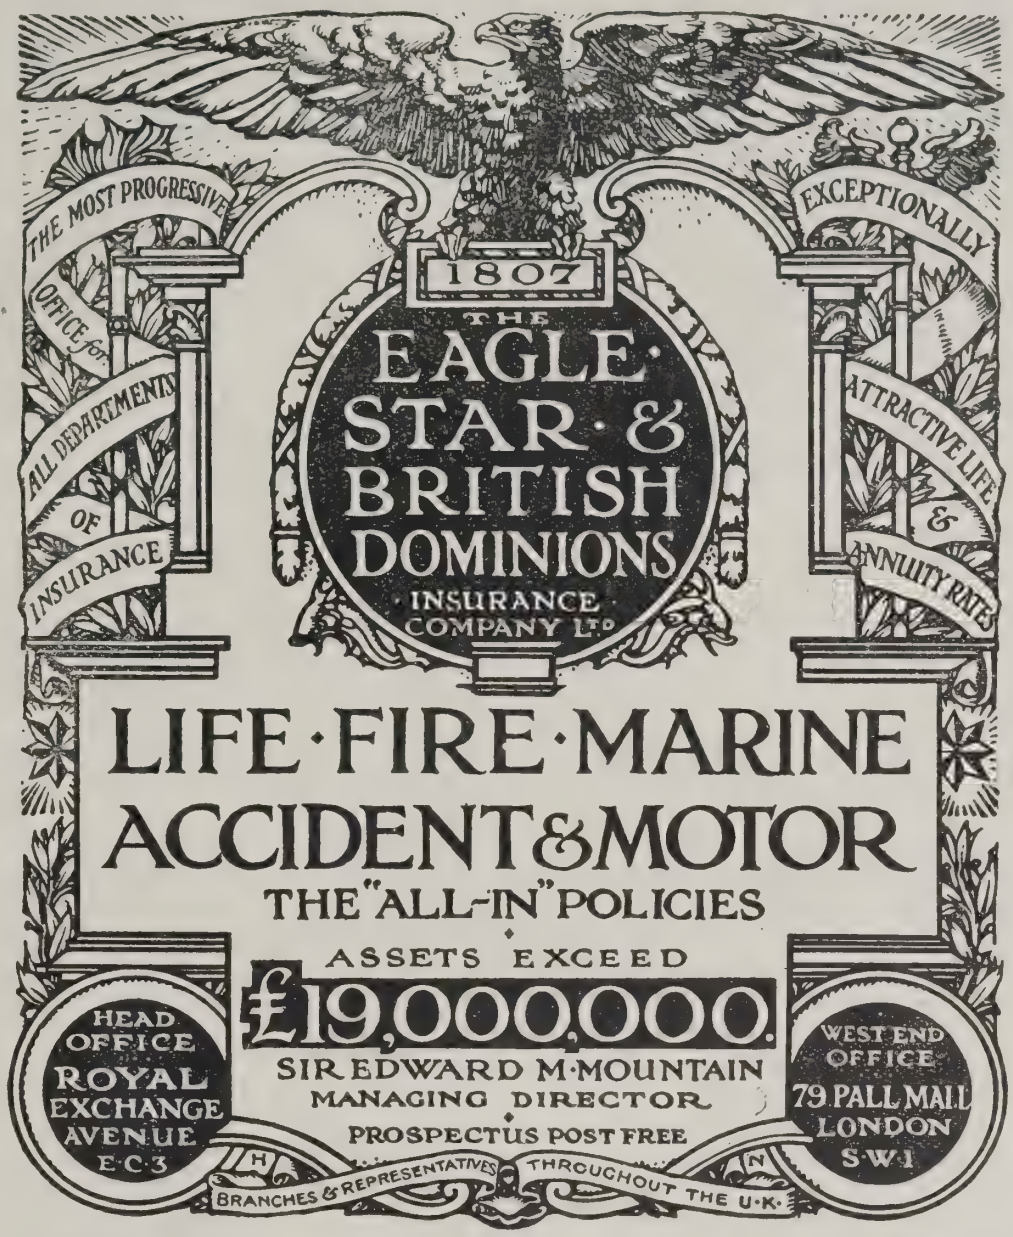
THE prospect of a career which the profession of banking has to offer has been frequently discussed from various points of view, and the changed conditions following on the war have brought home the far-reaching importance of the subject, not only to those directly affected, but to the business community as a whole. Mr F. E. Steele dealt with the subject in a most interesting manner some months ago, in the monthly review of one of the leading joint stock banks, and although it is pleasing to note that he sees in the changed conditions a more favourable field for the aspiring bank clerk, it is evident that there is still a wide scope for improvement.

The vital importance of developing and encouraging the personality and initiative of the staffs does not even yet seem to be adequately recognised by the banks. The system under which the junior clerks are trained too often tends rather to stifle than to encourage these qualities. Too much attention is given to organisation, so that the more brilliant a youth may be, the more is he made to feel like a mere cog in the wheel, until in self-defence he must either suppress his individuality or seek expression of it in other spheres.

This principle of standardising is carried even to the higher posts. Managers, for instance, being as a rule selected from the most conventionally correct type, such social qualities as suavity of manner and address are more in demand than originality and vigorous business ability, the main object being to placate the board of directors. Such training and selection would cause no surprise to those critics of our banks who used to contend that their policy was to encourage the attraction of deposits with the object of investing them in London. No doubt these critics sometimes overstated their case, but it has been remarked by merchants on more than one occasion that if the pained expression of the ordinary bank manager when a business proposition was put before him for consideration might be taken as an index of the general attitude of our great banks, it did not augur well for the assistance and encouragement the British trader might hope to receive at their hands.

This policy of accumulating resources in London served to provide funds for the foreign banks, who only too readily availed themselves of moneys thus placed at their disposal by the British depositor, to finance the trade and industry not necessarily of this, but more probably of their own countries. It was thus left to these institutions to provide the only internationally trained bankers, and naturally these were usually Germans, Swiss, or other nationals connected with the various foreign banks.

Another splendid training ground is to be found in the large finance houses which often produce first-class men under their apprenticeship system, but the lack of prospects, and the nepotism unfortunately so rampant, do not induce such men to look upon banking as a desirable profession, and they more often than not are driven to seek a career in the freer atmosphere of the commercial world where outstanding ability can command recognition and reward. Under such conditions how can robust personality and originality—probably the greatest factors in human progress—flourish? These qualities are not only discouraged by the banking system, but are actually a handicap to many a promising young bank clerk, who has deliberately had to suppress his enthusiasm in order to conform to the conventional routine of his institution.



These may appear severe strictures, but where an evil exists it is not by glossing over that a cure will be effected, but by probing to the very roots; and we apply the lancet because we believe that the profession of banking can afford legitimate scope for the very best brains in the country with advantage to the nation and profit to the individual.

Looking to the future, we do find some hope in the advent of the joint stock banks into the foreign field, the expansion of the private banking houses in this same direction, and more especially in the new oversea institutions that have recently been formed. Whether these hopes are justified will depend very greatly on how the present leaders in the banking world meet the demands of new conditions. They are at a parting of the ways, and if this venture into international banking is to be successful, will have to broaden their vision and discard much of the worn-out tradition which has shackled their minds.

As regards the educational side, the Bankers' Institute and kindred bodies are undoubtedly doing good work in helping to train the young members of the profession, but this does not go far enough. The bankers themselves must see to it that opportunity and encouragement are afforded to the brighter members of their staffs to complete the practical side of their education in the course of their daily duties, and an invaluable step in this direction has been taken by our leading banks in inaugurating a system of travelling scholarships. By keeping in constant touch with the staffs, making a personal study of the individuals, and especially by entrusting them with a measure of responsibility, much may be done to encourage those who from actual observation show special aptitude. We trust we are correct in believing that the old method of paying men according to a fixed grade, and too often of according appreciation to the manager who could keep those grades at a low figure, will be consigned to the oblivion it deserves, and that it will now be recognised not only as an economic principle but as a sound business fact, that generous recognition of good men is one of the great secrets of success. If the recently formed guilds will devote their energies towards attaining these objects, there will be no question as to the career which the banking profession can hold out, and no call for the British trader to seek from the foreign bank the facilities and trained assistance which he is entitled to receive from his own home banker. The English bank clerk is as good material as is to be found anywhere in the world, if only he is encouraged to develop himself and take an interest in his work, by being plainly shown that keenness is wanted, recognised, and rewarded. The old system encouraged him to be a machine, and too often snubbed him if he attempted to be anything else. Our banks now want alert and intelligent men for the world-wide expansion that is open before them, if they use their present opportunity; they can get them in plenty if they make the right use of the material under their hands.

BANK SHARES.

CONDITIONS have continued on the whole decidedly favourable to banking prosperity. Costs have, it is true, continued their upward course, and investment depreciation has not ceased; but high money rates coupled with an overwhelming demand for credit—a demand so great as to cause constant embarrassment to bankers—have outweighed other influences and paved the way to good profits and dividends. That has been the experience of banks at home, and the table of profits and dividends which we present below shows that it has also been the experience of leading banks operating in the Dominions and certain other parts of the world. The table gives a five years' comparison of net profits and dividend rates :—

PRINCIPAL CLASSES OF INSURANCE BUSINESS TRANSACTED INCLUDE:

† Free of income-tax. (k) 7 %, free of income-tax.

It will be seen that largely increased profits were a common experience, and that in the case of no fewer than ten of the banks quoted above dividend rates were raised.

The Bank share market is at most times a steady one. Its *clientèle* is for the most part of a conservative nature, and consists largely of those who favour sound and cautious investment policies. It is not liable to feverish activity or to periods of excessive depression. Nevertheless, it will be seen from the second table, printed below, that bank share quotations as a whole have not entirely escaped from the general Stock Exchange malaise which has been one of the features of recent months. Comparative prices, together with the latest yields, of the shares of the banks quoted in the first table, together with similar data for the shares of a few English joint-stock bank shares, are set out below :—

Share.	Am'unt of Share.	Paid up.	Price July 30, 1914.	Price Sept. 30, 1919.	Price Sept. 30 1920.	Yield.

† Free of tax.

Compared with a year ago the general experience is a decline in quotation. At first sight the increased quotation for the shares of the Bank of New Zealand from 14 a year ago to 25½ appears to be a notable exception, but this is due to the fact that the shares have become fully paid up, having previously been only 3⅓ paid up. This is another example of the tendency that has been in progress in recent years of making bank shares more readily available to small investors. In days gone by the great drawback to bank shares in the eyes of the investor of moderate purse was the large liability existing in the case of most of the shares. Furthermore, the frequently large denomination of the shares acted to restrict the number of people to whom the shares could appeal. In the past few years large numbers of banks have found it desirable to increase their capital, and in many cases advantage has been taken of the opportunity of capital rearrangement to remove both these obstacles to bank share popularity. The recent tendency has been to split shares into smaller denomination and to reduce, or even to wipe out entirely, the liability upon them. Small investors are now presented with a reasonably wide choice of bank shares of small denomination with no, or small, liability. Examples of shares of denominations of not more than £10—a number of them free altogether of liability—are quoted below, with latest quotations and yields :—

Bank.	Denomination. £	Amount Paid up. £	Price Sept. 30, 1920.	Yield £ s d
Anglo-South American	10	5	10½	7 2 9
Australian B. of Commerce ..	1	1	21/32	5 13 6
B. of British West Africa	10	4	6	6 13 3
B. of New Zealand.....	6⅔	6⅔	25½	4 11 6
Barclays "A"	4	4	6	6 13 3
Barclays "B".....	1	1	2 1/16	..
British Overseas, "A" ord. ..	5	5	5¼	..
Lloyds	5	1	2 3/16	..
London and Liverpool B. of Commerce.....	10	10	6½	6 19 0
London County Westminster and Parr's	1	1	1 15/16	6 9 0
London Joint City & Midland	2½	2½	7	6 9 3
Munster and Leinster	5	2	5⅞	6 16 3
National B. of South Africa	10	10	12½	6 8 0
Williams Deacons "A"	5	1	1 23/32	7 2 6
Williams Deacons "B"	1	1	1⅞	6 13 3

Liabilities on bank shares are of two kinds, "callable" liability, where so much per share may be called up to provide increased capital required in the ordinary course of business, and "reserve" liability, where the call can only come in the case of a winding up. Those who buy shares of banks having head offices in the colonies should, before purchase, make especially careful inquiry into this question of liability. For in some instances, where a share is apparently quoted as though having no liability, it has, in fact, a "reserve" liability, the amount of the face value being callable (if necessary) in the case of the bank being wound up.

BANKING WITH THE FAR EAST.

THE prosperity of banking in the Far East is closely linked with silver, and amongst the many and perplexing problems arising from the chaos left with us as the aftermath of the war not the least has been the great silver problem. The silver production of the world in 1913 amounted to 232,000,000 ounces, by 1917 it had fallen to 175,000,000 ounces, and although there has been some increase in production since, the present output from the mines amounts to no more than about 198,000,000 ounces. In all great wars of modern times there has been a noticeable increase in the demand for silver, chiefly one imagines because the metal is in great request owing to its utility for making small payments to the troops. If we add to this the world-wide inflation of commodity prices, it is not surprising that there has been a greatly extended demand for silver for coinage throughout the British Empire, on the Continent of Europe, and in the Far East. The effect upon the price of silver of this combination of scarcity of supply and increased demand was, it will be remembered, concealed for a time by the action of various Governments; the price of silver was, in fact, treated in much the same way as that of other controlled commodities. All restrictions were, however, removed in 1919, and since that date silver has been left to find its own level. The average price of the metal for the year 1919 was 57.05d, for the nine months ended September 30, 1920, the average was 65.517d, the highest monthly average during the year being that for February, 85.005d, and the lowest, that for June last, 51.096d. The average for the month of September was 59.475d.

In these circumstances the pathway of the Eastern Exchange banker has been a hard one to tread; he has not only had to combat with the hundred and one disturbing influences to trade caused by the senseless internal strife which of late years seems to have been part and parcel of Chinese life, but he has also had to deal with the vagaries of the silver exchanges—vagaries which are much more pronounced than those with which one meets in the European exchanges. It is, of course, axiomatic that rates of exchange for the Hong Kong dollar and for the Shanghai tael rise and fall with the London price of silver; that is the usual experience in normal times; nowadays, with America taking the leading position in the world's silver market, the problem has become still further complicated by the movements in the price of silver in the United States and the fluctuations in the New York-London exchange. These factors, coupled with the difficulty of obtaining silver sufficient for the requirements of the China trade and of keeping the metal in circulation in the East when it is obtained, have added enormously to the ordinary complexities of exchange operations, and the watchfulness and capacity of the staffs of the various banks must have been taxed to the uttermost to deal with the many intricate problems that have arisen.

When the London price of silver reached 89½d per standard ounce in February last the exchange quotation for the Hong Kong dollar rose to 6s 2d, while that for the Shanghai tael reached 9s 3d, both for telegraphic transfers on London. There has since been a reaction, and with the quotation for silver down to 53⅝d these two exchanges are quoted at 4s and 5s 4d respectively. Trade with the Far East in such circumstances naturally has needed much vigilance and care, but with the demand in the principal markets of the world for China's staple products, wool, oil, seeds, silk, hides, skins, &c., as keen as ever, there has been plenty of outlet for the profitable use of banking funds, especially in view of the fact that the high prices obtained have enabled the Chinese to purchase freely of European produce.

Those banks dealing with India have had an additional problem to tackle in connection with the somewhat erratic movements of the Indian rupee. In April, 1919, the rate of exchange had definitely broken away from the level of 1s 4d, and had risen to 1s 6d, and from that time onward it rose, until in December last a quotation of 2s 4d was reached. Then, after the turn of the year, arising out of the recommendations of the Committee on Indian exchange, the Indian rupee was divorced from the paper pound sterling and fixed on a gold basis of 10 rupees to one sovereign gold, the expectation being that the rate would fluctuate with the premium on gold in England. For a considerable time the Indian Government manipulated exchange by the sale of Reverse Councils, bills drawn India on London. They also paved the way for the introduction of their two-shilling rupee by making constant sales of gold in the Indian bazaars, the idea being gradually to reduce the premium on gold in India. Lately these artificial supports have been withdrawn, and, as if actuated by a malevolent instinct, the elusive rupee has again broken away, and has this time fallen to 1s 7¾d.

In spite of all these perplexing features, however, the Eastern and Indian exchange banks continue to make excellent progress. Their accounts are printed elsewhere in this issue, but as showing the means they have placed at the disposal of trade, we may point to the large and increasing figures which appear under the headings of bills discounted, loans and advances, acceptances for customers, credits issued, &c. As a natural corollary their dividends have increased, though due regard must be paid in all cases to the inflated values of commodities and to the depreciation in the pound sterling: when the value of the Hong Kong dollar, the Shanghai tael, the Indian rupee, and the Japanese yen is high, it means that exchange in each case is adverse to London.

The liquidity of the funds held by the banks is noticeable. Exchange banking, more than anything else, perhaps, calls for liquid funds, and in order to be in a position to finance incoming and outgoing shipments, the principal care of these banks is to keep their funds liquid. To tie up money in long-dated advances would mean disaster to Eastern banks. We mention this as there have been instances lately in which irate traders have called attention to the refusal of the banks to extend credit facilities. The position as we understand it is this: The banks see in many centres signs of prices breaking; they have evidence of cancellation of contracts, and in some centres there is no doubt an accumulation of stocks. In the circumstances the banks refuse, rightly enough, to be parties to speculative transactions; they know that if they financed the goods they might have to carry them a long time in their Eastern go-downs, and until the way is clearer some of them decline to give extended credit facilities for this purpose. Traders with the Far East, as well as those here, have to recognise the fact that the day of the enormously inflated values seen during the war years is over. The people recognise this, and are refraining from buying, and until some of the old stocks are worked off there is an element of danger in the situation. Japan is already feeling the pinch, with disastrous results to some of her finance houses.

For the rest, it remains to be said that China, as in pre-war days, continues to be in urgent need of funds for development purposes, and even as we write there comes the news that a new international consortium for dealing with China's financial needs has been formed. The agreement was signed on October 15th in New York. The primary object of the consortium is, it is stated, to benefit China by the establishment of public utility services. The British group consists of a number of British and Eastern Exchange banks, with the Hong Kong and Shanghai Banking Corporation at the head; the French group is headed by the Banque de l'Indo Chine and the Japanese group by the Yokohama Specie Bank, while the American group consists of Messrs J. P. Morgan and Co., Kuhn Loeb and Co., the National City Bank of New York, the Guaranty Trust Co., and several other important American banking concerns. With China an eager market for materials for development purposes, and with this very powerful international consortium again in the field, there should be plenty of scope for profitable business both for the banks and for traders.

FOREIGN BANKS WITH LONDON OFFICES.

Banks trading in foreign countries with offices in London are considered under the above heading. They can be further divided into two groups, namely, British undertakings, mostly with headquarters in London, and having branches in foreign countries, and foreign banks having branch offices in London. English joint-stock banks which have opened branches on the Continent in recent years, and British banks which have working agreements with foreign banks are not included in this section.

As yet no balance-sheet has been issued by the British Overseas Bank, but during the year it has formed the Anglo-Polish Bank in co-operation with Messrs Peretz and Co. Another development worthy of mention is the establishment of the British-American Continental Bank with an authorised capital of £2,500,000, of which £313,590 is paid up. This was formerly Hannevig's Bank. Statements of accounts have not yet been published by the P.O. Banking Corporation, Anglo-Baltic, and Mediterranean Bank, and the British and North European Bank.

The Société Générale pour Favoriser continues its progressive policy. In the United States, Czecho-Slovakia, Belgium, Spain, and Switzerland it is ex-

A General International Banking Business conducted at all Branches of the Bank.

tending operations and consolidating its positions. The Société Générale Alsacienne de Banque, a subsidiary, has made favourable progress, and its capital is to be doubled. The most recent development is the foundation of the Société Générale de Banque pour l'Etranger et les Colonies, with a capital of 25 million francs. The Crédit Lyonnais is now established at Strasbourg and Metz. The Société Générale de Crédit has established the Société Alsacienne de Crédit at Strasbourg, and is displaying considerable activity in Brussels. But it is among Italian banks that developments are noticeable and significant. The Credito Italiano has linked up with the Banca Unione di Credito of Lugano and the Banca di Credito Italo-Viennese of Vienna. It is interested in the Chinese undertaking—the Banca Italo-Cinese—and also extends operations to Roumania by affiliation with the Banque Générale Roumaine. The capital of the Credito Italiano is now 300 million lire, of which 220 millions are paid up. The Banca Commerciale Italiana has also increased its capital, which amounts to 400 million lire, with 312 millions fully subscribed. This institution has branches in New York and Constantinople. It has formed the Banca Commerciale Italiana and Rumena with a capital of 50 million lei. In Bulgaria it is represented by the Banca Commerciale Italiana and Bulgaria. In Hungary the Banca Ungaro-Italiana has been founded, amalgamating various Hungarian undertakings, and in Austria another subsidiary—the Società Italiana di Credito Commerciale—is established. According to a recent Press announcement, it has taken a share in the Boehmische Union Bank operating in Czecho-Slovakia, while in Switzerland it has for many years been identified with the Banca della Svizzera Italiana. In France there is the Banca Commerciale Italiana (France), with a head office at Marseilles, and in Paris it is linked up with the Banque Française et Italienne pour l'Amerique du Sud. Some time ago the Banca Commerciale Italiana obtained a controlling interest in the Banco Italiano of Lima.

The following table displays the position of Continental banks with offices in London :—

The figures of the Banco Nacional Ultramarino record remarkable gains in deposits and discounts and advances. The increases of this bank are followed, but not in such a great proportion, by the three big French banks. The Banco Nacional is extending its offices in Brazil, and establishing fresh branches in Belgian Congo, Hong Kong, and Bombay. The Russian banks are again omitted from the table. Messrs C. J. Hambro and Sons have amalgamated with the British Bank of Northern Commerce.

The Swiss Bank Corporation has contented itself with developing its resources in Switzerland rather than in extending operations abroad. The financial department of the French Embassy at Berne has now ceased to exist, and the Swiss Bank has been appointed to carry on the financial business of the French Republic in Switzerland. It has now a special pension fund, solely made up by contributions of the corporation. In April the banking business of Messrs Pury and Co., of Neuchâtel, was acquired. The total reserves of the Swiss Bank are 33 million francs, while it has a paid-up capital of 120 million francs.

The next table shows the position of Asiatic banks with offices in London :—

Simla, 27th July, 1920.

AUDITORS' REPORT.

We have audited the Balance Sheet of the Alliance Bank of Simla, Ltd., dated the 30th June, 1920, and above set forth, with the Books and Accounts as kept at the Head Office, and with the Certified Returns from the several Branches, and have obtained all the information and explanations we have required. In our opinion such Balance Sheet is drawn up in conformity with the law, and exhibits a true and correct view of the state of the Company's affairs, according to the best of our information and the explanations given to us, and as shown by the Books and Returns of the Company.

NEISON, DIGNASSE & Co., Chartered Accountants, Auditors.

AGENCIES in all the principal Cities and Towns in India, Burma and Ceylon. The Bank undertakes Banking business of every description.

changes. To quote the words of the chairman, Mr F. A. Plummer, when presiding at the annual meeting of shareholders: "Under the new system we do away with the nominal rate of 2s, at which the sterling reserve fund has appeared in the accounts for so many years, and in future the equivalent will be shown in the accounts at the current rate."

Interesting particulars of Chinese finance and revenue are given in the chairman's speech. Foreign loan and indemnity services require £7,000,000 annually. At the rates of exchange then prevailing Maritime and Native Customs collection under the I.G. of Customs amounted to about £20,000,000 annually. Thus the Chinese Government has a wide margin to pledge if the price of silver is maintained. The negotiations for the formation of the new consortium, described elsewhere, composed of British, French, Japanese, and American financial groups with the object of financing China, were delayed by the claim of the Japanese Government to "exclude Southern Manchuria and Eastern Inner Mongolia from the scope of the consortium." The bank is about to open offices at Harbin and Dairen.

The principal items extracted from balance-sheets of South American banks are given in the next table:—

SOUTH AMERICAN BANKS.

	Capital and Reserves.		Deposits.		Cash.		Investments.		Discounts and Advances.	
	1918-19.	1919-20.	1918-19.	1919-20.	1918-19.	1919-20.	1918-19.	1919-20.	1918-19.	1919-20.

London and River Plate....	3,800,000	3,900,000	30,515,335	36,071,239	12,762,067	16,528,989	..	..	26,166,088	30,817,313
	26,043,184	30,768,406	131,064,949	169,538,996	49,700,021	68,828,105	6,094,785	10,738,637	107,072,585	145,835,556

The Anglo-South American Bank is now linked up with the British Bank of South America and the Commercial Bank of Spanish America. The Anglo-South American Bank holds over 99 per cent. of the issued capital of the British Bank of South America, or, to be exact, 99,238 out of 100,000 shares of £20 each (£10 paid). It also holds 479,364 shares of £1 each out of 500,000 shares issued by the Commercial Bank of Spanish America.

To assist in the finance of the Bradford woollen trade with South America, a branch has recently been established at Bradford. The Banco a Edwards y Cia has also come under its control. This will further influence its interests in Chile.

In the development of the Anglo-South American Bank a significant feature has been the adoption of double working shifts. The benefits derived from the system is summed up as follows by an official of the bank:—"Generally speaking, the double shift system has allowed of an appreciable speeding up in output, for with a definitely limited office and desk space the employment of anything up to twice as many hands has been made possible. The difficulty which it was sought to cope with has thus been definitely overcome for the time being, and, while it is not yet conclusive, the experience of the past few weeks certainly goes to suggest that the principle of the double shift has come to stay. So far we have dealt with the matter entirely from the business standpoint, but it is interesting to note from the accounts received from the various departments that the principle has been quite a popular one with the staff itself. How far novelty is responsible for this remains to be seen, of course, but amongst the reasons put forward for this popularity are the greater comfort experienced in travelling and the better opportunities afforded for recreation."

It will be remembered that Lloyds Bank obtained a controlling interest in the London and River Plate Bank in 1918. The directors offered two Lloyds' shares of £50 each (£8 paid) for one London and River Plate share of £25 (£15 paid). By September, 1919, holders of 117,941 London and River Plate shares had accepted this offer.

The London and Brazilian Bank has a working arrangement with Williams Deacons at Manchester. This, together with its increased capital, should be of great assistance in maintaining its position in Brazil.

The final table shows American banks and trust companies which have offices in London:—

UNITED STATES BANKING AND TRUST COMPANIES.

($5 = £1.)

The list has been added to this year by the advent of the National City Bank of New York. As will be seen from the figures given above, this is a substantial concern. Moreover, it is progressive, and has been extending its operations during the year to various quarters of the world. It now "owns" the International Banking Corporation. The Guaranty Trust Company is also showing enterprise, and has announced the opening of an additional office at Constantinople.

AFRICAN BANKS.

With this and the three following articles statistics are given showing the stages of development of the banks of the overseas Dominions which have either branches or head offices in London, the figures being taken each year from the summary tables printed on another page. So far as South African banks are concerned, one of the chief problems of the past financial year has been the premium on gold and the consequent heavy export of the metal, which almost resulted in a crisis. As a solution of the difficulty, the Union Government passed the Currency and Banking Bill, one of the provisions of which was the foundation of a central bank, which will issue certificates in exchange for deposits of gold. How the problem has affected the banks was explained by the chairman of the National Bank of South Africa at the meeting held in Pretoria in June last:—"All through the war," he said, "we made strenuous efforts to keep the bank's gold reserves up to an adequate standard, but the Imperial authorities could not see their way to allow us to supply ourselves with sovereigns, except to a limited extent, and the exports of the country could only be financed by depleting our reserves unduly. When the embargo on the export of gold from Britain was removed in August last, the price of this commodity immediately jumped to a premium, and has ever since fluctuated severely. At one time the premium reached almost 45 per cent., but stands lower to-day at 23 per cent. It will be understood that under such conditions it has been an expensive matter for the bank to replenish its reserves.

"The Union Government is giving the matter its earnest attention, but the subject is one which bristles with difficulties, and in order to cope with the situation it has meanwhile been necessary to increase our exchange rates very materially. On the one hand, the gold mines have experienced great benefit from the higher price, but, on the other hand, the producers of other commodities for export have been severely handicapped by the exchange difficulties with which the banks have been contending."

In spite of these difficulties, however, the accounts of the South African banks show a continued expansion. Trade in South Africa and also in British East Africa was in a prosperous condition in 1919, and the figures of exports and imports show a balance of the former of well over £3 millions, exclusive of native gold. In reviewing the trade situation at the meeting of the Standard Bank of South Africa at the end of April last the chairman pointed out that "a drought of unusual severity inflicted heavy losses on the farming community, who, however, have found compensation in the abnormally high prices resulting from the urgent world demand for all classes of raw material.

"The gold-mining industry, which forms a predominant factor in the welfare of South Africa, was threatened by the growing burden of high working costs, but has found a considerable measure of relief in the re-establishment of a free market for gold..... An extraordinary demand for diamonds has prevailed throughout the world, and prices have so advanced that exports during the year under review, although little greater in quantity than those of the preceding 12 months, have realised an additional sum of over £4,400,000. The coal output, as regards quantity, was slightly below the highest figures hitherto recorded, though, in value, a fresh record was established. Manufacturing industries, notwithstanding the handicap imposed by shortage of skilled workers and material, maintained the satisfactory rate of expansion shown in recent years, but are still unable to cope with the ever-widening demand for their products. To a much greater extent than hitherto South Africa has been self-supporting. The balance of the overseas trade in foodstuffs, which in 1913 was nearly £7,400,000 against that country, was last year converted into a favourable balance of no less than £1,700,000." In British West Africa conditions have been favourable, according to the speech of the chairman of the Bank of British West Africa at the meeting in July.

How the individual banks have fared may be seen from the historical tables given on later pages. One of the features of the year has been the extension of the activities of the various banks and a continuation of the linking up process. Perhaps the most important event in African banking is the taking over by the Standard Bank of South Africa of the African Banking Corporation, particulars of which were given in the *Economist* of August 28th, page 326. The Standard Bank has also acquired an interest in the Bank of British West Africa, together with the London County Westminster and Parrs, and the National Provincial and Union, who have jointly taken 100,000 shares of £10 (£4 paid) in the Bank of British West Africa. A large part of the banking business of South Africa is now in the hands of the Standard Bank and the National Bank. These two banks, it is stated, will be the predominant partners in the new South African Reserve Bank, to be established in Pretoria. According to the *Scottish Bankers' Magazine*, the original capital of this new bank has been fixed at £1,000,000, of which not more than 50 per cent. will be subscribed at par by the existing banks, in proportion to their paid-up capital and reserves, whether such capital is subscribed in the Union or elsewhere. The amount remaining after the allotment to the banks will be offered to the public at par.

The opening of a branch in South Africa by the National City Bank of New York with a view to facilitating exchange operations between America and the Union is an event of no small significance.

BRANCHES AND AGENCIES THROUGHOUT THE WORLD. APPLICATIONS FOR AGENCIES INVITED.

THE PURCHASING PRICE OF A SOVEREIGN

IS ABOUT HALF what it was in pre-War days. Consequently, where £500 was sufficient to replace a loss—say by fire—a sum of double that amount is now necessary. If this is true of Fire Insurance, it is equally so of Life Assurance. A Life Policy of £1,000 may have been sufficient to protect a man's dependents in pre-War days; it is far below the requisite amount to-day.

If it is necessary to increase one's cover for buildings, furniture, implements, stock, etc., how much more important is it to increase the cover on one's life, which, in nine cases out of ten, is a man's principal asset. **Take thought, therefore, of the amount of your LIFE Policy, and bring it up to date.**

THE STANDARD LIFE ASSURANCE COMPANY'S **BOUNTY SCHEME** offers the ideal Policy to effect the necessary increase at minimum cost.

Special facilities are afforded to existing Policyholders to augment their Policies—in many cases no further medical examination being necessary.

Write for Booklet 17.

DUBLIN: 59 Dawson Street.

THE

CANADA LIFE

ASSURANCE COMPANY

is the oldest Life Office of the Empire from beyond the seas. It was founded in 1847 and now possesses Assets of £14,250,000, thus being one of the largest Life Offices in the Empire.

Its financial position is unusually strong, and is under the strictest Government supervision.

Its Policy Contract, with Guaranteed Loan and Surrender Values, is the most liberal in the Life Assurance market, and its Bonuses to Policyholders have not been surpassed.

The Company has enjoyed the almost unique experience of increasing its bonuses during the last five years, and with the return of normal times its profit-earning power must be enormously strengthened, and be greatly in excess of anything previously experienced.

At the end of last year the Company carried forward over £1,500,000 of undivided surplus. The Company also transacts annuity business on the most favourable terms.

APPLICATIONS FOR DISTRICT AGENCIES

are invited from Gentlemen in a position to influence a moderate volume of new business annually.

Reply to **MANAGER, Canada Life Office, Canada Life Building, King Street, Cheapside, London, E.C.2.**

AUSTRALASIAN BANKS.

THE Australian trade returns for the year ended June 30th last show a very heavy export excess as compared with previous years, as will be seen from the following table :—

	Imports. Merchandise.	Exports. Merchandise.	Excess of Exports.
	£	£	£
1914-15	63,995,710 ..	57,967,726 ..	*
1915-16	76,970,191 ..	64,223,063 ..	*
1916-17	76,029,772 ..	86,343,185 ..	10,313,413
1917-18	60,848,065 ..	75,035,222 ..	14,187,157
1918-19	94,970,554 ..	106,795,815 ..	11,825,261
1919-20	97,401,267 ..	144,258,627 ..	46,857,360

* Excess of imports, 1914-15, £6,027,984 ; 1915-16, £12,747,128.

These figures have an important bearing upon the banking position. It is pointed out by the *Australasian Insurance and Banking Record* that "during the past year an increase of about 28 millions has taken place in liabilities in Australia and New Zealand, while the total assets held at this end of the world show a reduction of about 4¼ millions, the cumulative effect of these movements being about 32¼ millions, which has resulted in an increase in London assets." A year ago the assets in Australia and New Zealand exceeded the liabilities by £11,146,941, but at present the liabilities in Australia and New Zealand exceed the assets locally held by £21,126,372, made up as follows :—

	£
Ordinary banks in Australia, excess of assets	7,976,644
Commonwealth Bank of Australia, excess of liabilities	10,261,663
Net excess of liabilities in Australia	2,285,019
Excess of liabilities, New Zealand	18,841,353
Total excess of liabilities	21,126,372

The accumulation of Australasian balances in London to which these figures point is due to the unusually large excess of exports over imports, together with the large payments for wool and wheat received from the British Government in anticipation of shipments still to be effected. In addition to making these advance payments during the war, when owing to the pressure on shipping the realisation of Australian produce through other channels would have been exceedingly prolonged, the British Government also provided a large amount for Australian and New Zealand military disbursements abroad, thus relieving the strain on public finance. At the present moment the increase in Australian import trade is tending somewhat against London balances, but the payments on account of wool profits by the British Government will tell in the opposite direction.

The steady increase in deposits since 1914 shown in the table below, though partially a reflection of inflation resulting from Government expenditure, is also to a considerable extent due to accumulation based upon production and upon the realisation of wool, wheat, meat, butter, metals, and other articles at the high prices produced by the war. Our Australian contemporary also points out that the increase in deposits during the past year has been nearly all in deposits not bearing interest, a form in which the money is less rapidly available for employment than if it were fixed. The movements shown by deposits bearing interest, when examined in detail, show the influence of various Government operations and of transactions between the Commonwealth Government and the banks, but after making allowance for special causes, a tendency has been rather more noticeable on the part of those having money to invest to place it on fixed deposit with the banks in preference to buying securities. While the ordinary banks show an increase of £35,674,792 in deposits during the past year, the Commonwealth Bank shows a decrease of £7,444,481 (apart from its Savings Bank department), leaving a net increase of £28,230,311. The increase in advances is the net result of various cross-currents. The wheat advance in Australia shows a decrease of nearly £17 millions, and outstanding war loan advances are on a smaller scale, repayments having been made at a satisfactory rate. On the other hand, the requirements of the country districts for accommodation, especially in New South Wales and Queensland, have increased.

The deposits of the New Zealand banks also show a large growth, the increase since 1914, according to the chairman of the Bank of New Zealand, amounting to 150 per cent. in current accounts and 50 per cent. in fixed deposits. "The phenomenal growth last year is probably attributable in great measure to the exceptional and large disbursements—upwards of £18,000,000—made by the Government in connection with the repatriation of soldiers, which must have increased bank deposits to a very substantial extent. It is also due, in some degree, to improved shipping facilities which have enabled a larger quantity of produce to be realised upon by exportation." Many of the Australasian banks have lately been increasing their paid-up capital, the increase in capital and reserves in the table below being much larger in the past year than in previous years. An amalgamation between the English, Scottish, and Australian Bank and the London Bank of Australia, details of which were given in the *Economist* of August 21st, page 296, has been arranged, and we are informed that the offer has been accepted by 90 per cent. of the shareholders in the London Bank of Australia, so that the amalgamation is now assured.

THE
BRITISH EQUITABLE
ASSURANCE COMPANY, Ltd.

Was founded in 1854 and has therefore been in existence for over half a century. The Company transacts the following classes of business :—

1. LIFE ASSURANCE of every description, including the grant of Investment Policies securing guaranteed benefits.
2. FIRE INSURANCE.
3. PERSONAL ACCIDENT INSURANCE.
4. INSURANCE AGAINST SICKNESS.
5. WORKMEN'S COMPENSATION AND DOMESTIC SERVANTS' INSURANCE.
6. BURGLARY INSURANCE.
7. INSURANCES for the REPLACEMENT of CAPITAL on the expiry of a term certain.
8. THIRD PARTY INSURANCE.
9. MONTHLY PREMIUM POLICY without Medical Examination.
10. IMMEDIATE ANNUITIES.

SECURITY.

The British Equitable offers Ample Security, viz :—

SUBSCRIBED CAPITAL (of which £34,500 has been paid up)	£300,000
LIFE ASSURANCE FUND	£1,594,000
FIRE, ACCIDENT, AND GENERAL FUND ...	£73,000
EMPLOYERS' LIABILITY FUND	£4,000
REVENUE	£200,000
CLAIMS PAID ... ...exceed	£5,000,000

The Company will be pleased to quote special terms for all classes of Insurance and Investments. Write for free copy of our fully explanatory Prospectus.

Head Office :

1, 2 & 3, QUEEN ST. PLACE, LONDON, E.C.4.

Branches at Birmingham Bristol, Leeds, Liverpool, Manchester, Nottingham

CANADIAN BANKS.

In approaching the figures presented below, it must be remembered that the year 1919, which, roughly speaking, is the period covered by the reports there analysed, was a time of prosperity and active trade in the Dominion. Foreign trade was well maintained and domestic trade expanded. The present year has seen a somewhat striking reaction in some directions, but if we take the figures of foreign merchandise trade up to the end of February last we get the following comparison with the two preceding periods :—

	Twelve Months Ending February.		
	1918.	1919.	1920.
	$	$	$
Imports	978,516,842 ..	935,266,472 ..	993,870,100
Exports	1,608,975,827 ..	1,265,646,785 ..	1,295,277,176

The figures for the first six months of 1920 make a strong contrast, for they read :—Imports, $680 millions; exports, $555 millions. The balance on the merchandise figures has swung round against Canada. That bankers were preparing for reaction is shown by the speeches at the meetings of the leading Canadian banks. For instance, at the meeting of the Bank of Montreal last December Sir Frederick William Taylor, the general manager, said :—"The inevitable decline in prices is at last nearer, and it is to be hoped that the delay is not lulling dealers into the erroneous belief that the standards of these last few years will continue indefinitely. Misconception on this point would constitute a menace alike to borrower and banker. It seems certain that food prices will drop presently, and that all commodities must decline in price; therefore, great care and scrutiny of credits on the part of bankers and other business men are imperative." But the financial years of the banks covered by the last line of figures in the subjoined table were closed before the tide began to ebb. As far as 1919 is concerned, feverish activity was the feature. The volume of money in circulation exceeded records, and there were periods of speculative booms on the Stock Exchanges. Business failures were exceptionally few in number, and both banks and merchants incurred few serious losses from bad debts. Crops, though bountiful in some regions, were only fair on the whole, but very high prices were obtained. The conditions produced increased profits for the banks, both through increased turnover and through the avoidance of losses to an unusual degree.

It will be seen below that the number of Canadian banks having London offices has risen from six—to which it declined a year ago through the absorption of the Bank of British North America by the Bank of Montreal—to eight. The two banks which opened up branches in London are the Bank of Nova Scotia and the Merchants' Bank of Canada. The addition of these two vitiates the figures somewhat for the purposes of comparison with the previous year, but the percentage figures show the general tendency of movements. A feature is the increase in discounts and advances. On the other hand, the proportion of investments to total liabilities, which has been rising in recent years, has fallen back, while the cash proportion continues the steady fall which it has recently exhibited. The proportion of deposits to total liabilities remains constant, and the steadiness of this relation during the past five years is worthy of notice.

In all directions the story of Canadian banking in 1919 was one of expansion. The number of new branches opened in Canada was exceptionally large, and the extension of activities abroad was also continued. The Royal Bank of Canada has established a subsidiary in Paris, thereby following the lead of the Bank of Montreal; while the latter has acquired an interest in the Colonial Bank. In Canada, as in England, the desirability of increasing the capital of the banks has been realised. The Bank of Montreal's capital was increased by $4,000,000 to $20,000,000, the increase in this case being primarily connected with the acquisition of the Bank of British North America, which took place in the previous year. The paid-up capital of the Union Bank of Canada was advanced by just short of $3,000,000. Substantial capital increases have also recently been arranged by the Royal Bank and the Merchants' Bank. Included among the figures in the table at the bottom of this page are those of the Colonial Bank. At a meeting of this bank last week the chairman drew attention to the great prosperity of the West Indies, and devoted an interesting passage to the new Canada-West Indies trade agreement. He said : "Thanks to the very close working arrangements we have with the Bank of Montreal, we are in a position to handle Canadian business as effectively as though we had a network of our own branches in Canada; while, at the same time, the Bank of Montreal, with its branches from the Atlantic to the Pacific, will be able to send through us a large proportion of the increased Canadian business which we hope there will be with the West Indies."

Towards the close of last year the banks' figures were substantially influenced by the part taken in financing the Canadian Victory Loan of November. This loan produced $682 millions from 830,000 subscribers, as compared with $695 millions from 1,104,000 subscribers in the 1918 loan, and $419 millions from 470,000 subscribers in the case of the loan of 1917. Like the Mother Country, Canada has produced new classes of investors, and it is hoped that the educative effect of the recent loan campaigns will prove to have produced a permanent effect in the direction of saving for investment.

INDIAN BANKS.

The four banks whose figures for the latest financial year are collated in the table printed at the foot of this page are the National Bank of India, the Mercantile Bank of India, the Chartered Bank of India, Australia, and China, and the Eastern Bank. All four have their head offices in London. The Tata Industrial Bank, Limited, whose headquarters are in Bombay, has now opened a London office. It will be seen that the four banks mentioned above have increased their number of branches from 88, at which it has remained for three years, to 93. The last report of the Tata Industrial Bank shows that at March 31st last it had seven branches and four sub-branches open for business. In his minority report contained in the Report of the Committee on Indian Exchange and Currency, Mr Dalal drew attention to the need for spreading banking facilities in India, and gave interesting figures. India, he said, contains 2,253 towns with 29 millions of inhabitants, and 720,342 villages with a population of 285 millions; but at the end of 1917 the total number of banking offices in India was only 402, many of them overlapping in the large towns. In fact, only 165 towns had banking offices. This he contrasted with the United Kingdom's 9,138 banking offices and Canada's 4,000. "Money," he said, "lies dormant in endless small hoards," and pleaded for banking development. "It will be seen that there is a vast virgin field for the development and expansion of banking, and for the collection into bank reserves of the innumerable stores of money lying idle throughout the country which could be utilised for the benefit of the holders and for the good of trade and of the State." Meanwhile, an Imperial Bank of India is about to be launched, the Imperial Bank Bill having been passed by the Imperial Council at Simla on September 8th. At the annual general meeting last April of the Chartered Bank of India, Australia, and China the chairman called attention to the fact that "one of the conditions of setting up of the Imperial Bank is the opening of a large number of sub-branches in various parts of India." "Any measure," he continued, "which tends to encourage the development of banking in India, the attracting of deposits from the public at large, and the gradual cessation of the unprofitable system of hoarding can only be for the good of India, both for the individual and for the State. We wish the Imperial Bank a successful career, fully confident that there is ample scope in India both for the semi-State bank and for the British Exchange Banks."

The year covered by the figures set out below was one of prosperous expansion, trade rapidly recovering, and a good monsoon helping. But the chief feature of the period was the extraordinary fluctuations in the value of the rupee. Valued at about 1s 6d in April, 1919, the rupee was quoted at 2s 4d in December. At about this date it was decided to fix the rupee on a gold basis of ten to £1 sterling gold. Rupee movements and the importance of the report of the Committee on Indian Currency and Exchange are explained and discussed in a separate article in this issue on "Banking With the Far East," and we need not re-tread the ground here. These subjects furnished a theme for most of the speeches at the bank meetings, and one may note in passing the remark of the chairman of the Mercantile Bank of India: "Banking and commerce are soundest under a more or less stable rupee. The fluctuations during the past few years have added to the anxieties, hazards, and difficulties of finance and trade exceedingly." This is a reminder that the period carried with it anxieties and embarrassments. To turn again to the figures in the last line of the sub-joined table, we find striking expansion in every item. Discounts and advances increased by £30½ millions and deposits by over £41 millions, though in each case the ratio to total liabilities declined. Investments rose by nearly £5½ millions, and a remarkable jump of £14½ millions in the item of "cash in hand and money at call and short notice" brought about a rise of no less than 4 per cent. in the proportion to total liabilities. The capital and reserves of the four banks were increased during the year by over £2,300,000. As in England, increasing demands upon the banks' resources have made capital increases necessary and desirable, and the process is still continuing. At an extraordinary general meeting of the Chartered Bank of India a fortnight ago a resolution was passed to issue 200,000 new shares of £5 each. At the meeting of the Mercantile Bank of India last April power was taken to raise the capital to £3,000,000 by the creation of 300,000 new shares of £5 each. The National Bank has just issued to shareholders 40,000 £25 shares (£12 10s paid up) at the price of £20 per share. Net profits, allocation to reserve, and dividend rates of the four banks are shown below for 1918 and 1919:—

	1918.			1919.

In August last 200,000 new shares of £10 each, of which 100,000 (£4 paid), were allotted in equal proportions to the London County Westminster and Parr's Bank, Limited, the National Provincial and Union Bank of England, Limited, and the Standard Bank of South Africa, Limited.

The profit and loss account for the year to March 31, 1920, showed that after providing for current charges, rebate, and bad and doubtful debts there remained a net profit of £125,147, which, added to the balance of £22,680 brought forward, made an available sum of £147,827. The dividend for the year at the rate of 10 per cent. absorbed £71,200, £5,000 was added to insurance fund, £15,000 to premises and furniture, £5,000 to the staff fund, and £21,250 to reserve leaving £30,377 to be carried forward.

"The prudent man looketh well to his going."

Business men do well to remember this proverb.

Never before has it been so necessary to provide against loss of capital. Capital is essential at the present time. It is the foundations of your house. You can maintain it only by adequate insurance.

Present-day requirements necessitate an increase of **more than 100 per cent.** of your pre-war insurance estimates. Not only must your dependents be provided for on a more generous scale, but death of partner, fire, burglary, and other liabilities must be guarded against. Any extraordinary expenditure of capital might mean for you, calamity.

Consult an expert.

Let the PRUDENTIAL advise you.

PITMAN'S BOOKS FOR BANKERS.

EASTERN EXCHANGE, CURRENCY AND FINANCE.

By W. F. SPALDING.

Certificated Associate of the Institute of Bankers.

THIS volume contains, in a form readily accessible, a properly authenticated account of the somewhat intricate subject of Eastern Exchange. In the new edition the silver problem for the first time receives full attention and the whole of the matter has been brought up-to-date. Third Edition.

In Demy 8vo, Cloth, 375 pp., 15/- net.

BANKERS' ADVANCES.

By F. R. STEAD.
Edited by Sir John Paget, K.C.

IN this new book Advances against Marketable Securities, Goods and Produce, Real Property, Ships, Debts, Debentures, etc., are explained in a comprehensive manner, and the considerations, necessary in Granting Advances to Local Authorities, Building Societies, Partnerships, Joint Borrowers, Trustees, Personal Representatives, etc., receive adequate treatment.

In Demy 8vo, Cloth, 144 pp., 6/- net.

TITLE DEEDS AND THE RUDIMENTS OF REAL PROPERTY LAW.

By F. R. STEAD.

IN this book the author has brought together the results of a special study and of an exceptional amount of actual experience in the examination of title deeds. It will be found particularly interesting to bankers and others to whom a knowledge of the subject is useful. Third Edition.

In Demy 8vo, Cloth, 151 pp., 6/- net.

SIMPLE INTEREST TABLES.

By Sir WILLIAM SCHOOLING, K.B.E.

THE purpose of the tables is to enable every result that is needed to be obtained by the easiest of all arithmetical operations—that of simple addition. It is literally correct to say that Interest at the rate of any penny from 1*d* to £99 19*s* 11*d* per cent., and other rates as well, can be found from these tables.

In Crown 4to, Cloth Gilt, 21/- net.

DICTIONARY OF BANKING.

Third Edition. A Concise Encyclopædia of Banking Law and Practice.

By WM. THOMSON, Bank Inspector.

WITH a Section on Irish Land Laws in their relation to Banking, by Lloyd Christian. Handsomely bound in Half Leather Gilt Full particulars on application.

Reserve Fund and Undivided Profits....£1,146,430

60,000 "C" Shares of £5 each, issued at a premium of £5, were issued in April. These shares rank for dividend from July 1 on the full nominal amount of the shares.

The net profits for the year ended December 31, 1919, after providing for bad and doubtful debts, and including £85,794 brought forward from last account, amounted to £301,430. From this sum was deducted £52,500, being the interim dividend of 7 per cent., less income-tax, on the "A" and "B" shares paid for the half-year ended June 30, 1919. The directors added £50,000 to the reserve fund (raising it to £700,000), £15,000 to the officers' pension fund, and wrote £20,000 off freehold banking premises. They recommended a further dividend on the "A" and "B" shares of 7 per cent., less income-tax, for the second half of the year (making 14 per cent. for the year), and a bonus of 2 per cent., leaving a balance of £96,430 to be carried forward.
